I had a friend calling up many dealers looking for a special "beta version" of the Superstar 4900B base that "only they" advertized. After talking to the radio distributor, I found out there isn't any "Beta, Alpha or Kappa" versions in existance, "That" company's website just leaves the "B" off their description of the 4900B base, & calls it a "Superstar 4900 base - Beta version"!!!....Don't get Suckered....

Jim has a bit of an attitude problem anyways. I called him on a price on some radios a while back and he went off on me for buying my radios on the internet or mail order and that I was taking money away from the state I live in. All this cause I told him his prices were a bit high. Anyways I bought the radio from a different local guy whose prices matched the online/mailorder people. I see he finally got off his dinosaur ass and got on the internet.

>
>They also have a BS-2 but the frequency range was not shown.

Checked again. Nope, no BS-2. But here's the description for the BS-1
which is under a list of CB antennas:

"
1/2 WAVE INDOOR DIPOLE ANTENNA
C. B. BASE ANTENNA COMPLETE w/COAX and PL259 CONNECTOR.
MOUNTS CONVENIENTLY ON WALLS or CEILINGS

$9.95
"

So it said twice that it was a CB antenna, and that is the frequency
coverage. If there is a BS-2, neither I nor their site search could
find it. Please post the link.

3383. CB vs. Ham revisited...

Newsgroup: rec.radio.cb
Date: 2001-04-08 15:51:35 UTC
From: "Gary P. Harrelson" <GARYPHARRELSON@prodigy.net>
Message-ID: <9aq1ec$707k$1@newssvr05-en0.news.prodigy.com>
Source record: 77858

Ladies and Gentlemen,

After posting the message, "CB vs. Ham...", I received a few emails about legal vs. illegal as well as the amplifier / power issue. On the issue of legal vs. illegal I thought I was pretty clear on my stance. After re-reviewing my original post I had noticed a lack of explanation on the use of amplifiers. I am a licensed amateur radio operator with the operator privileges of general. Prior to the FCC re-vamping the amateur radio service I was very active in Ham radio. Knowing all the regulations and restrictions is another thing. At that time, I believe on certain bands I was authorized 1500 watts. Not that I ever needed to use such an amount. One time I spoke with a gentleman from Germany on 50 watts. It all depends on the band, the time of day, the sun spot cycle, who keeps track of all of this? Now on the 11 meter band I cannot even chat with another person on the other side of town. It is my belief that the FCC chose the 11 meter band for citizens because of the reactions it has towards weather, sun spot cycles, time of day, etc. Does that mean that the government couldn't use this band and since there were no buyers for the band they threw it to the people as you would throw a dog leftovers? Probably. The FCC doesn't have the funds or the manpower or the time to police the 11 meter band. From what I understand, they act upon complaints of the people. I tell my children daily that I hate tattletales. I hate whiners. What could be worse than a constant complainer? A Ham that likes CB? It's a hobby, not a lifestyle. Should I contact John Deere because the riding mower my neighbor uses interferes with my TV? Or should I contact CBS because on Survivor they killed a pig? If someone uses an amplifier responsibly, who am I to tell them to stop? More than half of the people doing the tattling could probably get in trouble with some type of government agency. I'm driving on expired tags but I am going to tell on Junebug who has a 200 watt linear under the seat of his pickup. Some people are pathetic. In my opinion, people should worry about themselves. The old saying still holds true today, "Those who throw stones shouldn't live in glass houses." Spouting the FCC rule book, complaining about this or that. Sounds to me like, "Mom, Billy's being mean to me again." I have no use for bible thumpers or the self righteous. If you don't like what's on TV, change the damn channel. I would love to have enough money to afford a 10,000 watt amplifier with four alternators and 10 batteries. Then I would annoy everyone with my roger beep and echo and make fun of the people. Hell, I have bills to pay. If I had that much time and money, I would probably find something else to buy. But, and here is the part that the self righteous Ham police won't like, I love amplifiers. Most CB'ers don't have access to the other bands and really don't want to talk on the other bands. I still think there should be a use limitation. Like 2500 watts for a mobile and 1500 watts for a base. And possibly a time of day restriction. Wouldn't want to piss off the wife

of a Ham operator that couldn't watch her soap opera. I was stationed at Fort Campbell and lived on base. Because I was on base, I not only had the FCC to deal with but the FAA as well because two airfields were on base. I also had to deal with the Division Frequency Manager as well as the Base Frequency Coordinator. Height restrictions, power restrictions, frequency restrictions, blah blah blah. They even sent someone over to inspect my station with a checklist. Why did they even contact me? Because some ass wipe complained that I was interrupting his NASCAR race. Once they did their inspections they found that I was legal. So every time a NASCAR race was on I made sure I was transmitting. Just because someone complains does not mean that someone will get in trouble. Now don't sit in your neighbors driveway and transmit 5 grand and expect not to hear from someone. Basement technicians, I respect what you do and what you build or what you repair. I wish I knew as much as you guys do. Again, isn't it ironic that an amateur radio operator loves citizens band radio? I have no reason to hide or forge or anything. My opinion is just that, an opinion. I choose to be legal. My call sign is KF4UNF and if you ever hear me on 10 meters, give me a shout. I have had a lot of handles on CB; Buckeye, World Wide Bandit 84, American Kangaroo 1084. If you hear me on 11 meters, give me a shout. I live about an hour north of Detroit. Beautiful country. 73's and take care. Train, the NASCAR bit was for you.

There is an interesting article about the FCC's new DF stations in the April
issue of QST starting on page 28. Seems like they busted several
Freebanders, several High Power CB stations, and a few idiot Hams using the
new equipment already. For the amplifier users and pirate CB operators on
the news group it should be of interest.

An interesting post, Gary. Just off slightly on the following points:

>After reviewing the posts on this news group it would appear to me that
>there is a line drawn in the sand between amateur radio operators and
>citizen band radio operators.

Actually, if you reviewed posts, you should have picked up on the fact that most people here are CB operators, and some "happen" to be licensed Amateurs, also. You are an example of this growing trend. It is not a "them vs us" situation. We ALL enjoy CB. When an Amateur posts here, he should "check his license at the door". See the FAQ for more on this subject.

> We really detest some self appointed, radio wave Nazi SS
>reiterating verbatim the entire rule book to us.

If you have been reading for any length of time, Gary, you will recall that there are some who attempt to "sucker" newbies into believing that:
(a) the FCC no longer cares what happens;
(b) It's okay to transmit anywhere you wish;
(c) Nobody can track you down, so you're free to do what you wish, without threat of penalty.

Anyone getting his/her information strictly from this newsgroup would receive an inaccurate picture of CB Radio today unless there were some willing to speak up and say, "That's wrong". Many participants here read Popular Communication, QST, and monitor the FCC web site. It always has been a standard practice in rec.radio.cb to confront error so that this stays a quasi-reliable place to obtain information. It also is the norm for folks to brand the "truth speakers" as Nazi's.

> Laws, rules, and regulations can be interpreted
>differently by different governing bodies.

There never has, in the history of CB Radio, been any question about what is legal power and what are legal frequencies.

> I say open all frequencies, except military bands, to the
>populous.

This who do not know History are doomed to repeat it. This was tried in the early days of radio. It was bedlam. Nobody could do anything. There must be rules and allocations. Otherwise, the radio spectrum is useless. Motor vehicle laws are a similar situation.

> I didn't want to use the
>phrase, "Can't we all just get along?" but there I did. Common courtesy, in

>my opinion is the most important thing mentioned in this message.

I agree about courtesy. It also involves respect for the rights of others,
along with a healty dose of accountability for one's actions.

Best regards,
QRM

A 1/4 wave whip is a 36 ohm antenna when properly mounted and tuned. Actually, there is no tuning for a 1/4 wave whip. This 36 ohm impedance equates to an SWR of about 1.5:1. If any antenna has a 1.5:1 SWR, you will be splitting hairs to get the SWR down, and you may end up detuning the antenna for a difference that no one will notice. 1.5:1 and 1.1:1 are the same for transmitting and receiving. Better to have resonance then 1.1:1.

Now that is just what I had hoped for, some nice honest and to the point feedback! I admit I did get a bit taken by the ad on THAT web site but not enough to buy the radio without doing a bit of research first,since posting I have heard a few negative things regarding the weak power supply in the 2990 as well as less than perfect customer service, I wont be sending $800.00 to Texas any time soon,that's for sure!I was pretty active on the air waves in the late seventy's and early eighty's and I am planning on getting back into the hobby.back then I ran A Tram-D201, that great radio has long since been sold and I have really not kept up with current trends and the better radios now available out there. I will take your advise and check out those other radios mentioned, thanks for the input and welcome more of the same,allot of years have passed and I am back down to newbie status, thanks again to all!

Dan

You won't find them new from a dealer.
But you might find one one E-bay or yahoo auctions.
Be advvised, they do go for a pretty penny in mint condition...

http://www.ebay.com/

http://auctions.yahoo.com/

Good luck...

3406. Re: Roadmap for Excalibur SSB

Newsgroup: rec.radio.cb
Date: 2001-04-08 21:47:26 UTC
From: Richard McCollum <rmccoll@radiks.net>
Message-ID: <YY4A6.1481$kp6.647490@nntp2.onemain.com>
Source record: 77882

Best guess can be found at
http://www.geocities.com/CapeCanaveral/Launchpad/8243/cb
It is at the bottom. The chart is for seven bands so you get to figure
out which six you have; more than likely the top six. No guarantees (I
wouldn't know an Excalibur if it drove over my toes on a tricycle) -- this
is the most common arrangement, however.

Now, having given you the key, I need to point out to you that everything
above 28 MHz is assigned by international treaty everywhere to the Amateur
Service. Amateur rules do not allow them to talk with you and give you no
protection from interference. You obviously run a greater risk fiddling
there. Doing so in LSB or on freqs where SSB is not done makes you stand
out like the proverbial sore thumb. So endeth the sermon.

From: codetalker <codetalker@hotmail.com>
Message-ID: <FL5A6.14990$VF3.1431462@newsread2.prod.itd.earthlink.net>
Source record: 77883

This is somewhat off topic but I wasn't sure which group would be most appropriate for this question. I should also add that the term "clueless" regarding my knowledge of antennas would be appropriate.

I have a NOAA weather radio with an external antenna adaptor. I needed a external antenna but not an outdoor type. I was able to connect a mobile (magnet mount) CB antenna. Do I need to mount this on a metallic surface in order to establish a "ground plane"? (I'm not sure what this is.). When I had the antenna placed on a (don't laugh) cookie sheet it seemed to perform much better that when it was placed just on a wooden surface.

Appreciate any advice. Thanks.

SWR is lowest at the resonant frequency. This is also the point where the
input and output
Impedances most closely match, A 102" whip is electrically short for
11meters and therefore
necessitates the use of a spring or other device to lengthen it. In the past
i have crimped a length of
stiff wire to the end of the antenna to achieve resonance on a desired
frequency.
All antennas are tuneable,but not all people can tune them.....

In a nutshell, YES. The magnet-mount antenna uses a capacitive/inductive coupling to ground itself.
You need the mettalic surface for the reflection.
The cookie sheet is acting as the apparent ground plane and allowing the antenna to perform
correctly.

> the other side of town.

And whose fault is that? You let you kids hear the wonderful language used on 11m? It would increase their vocabulary if you did. They can also learn how to be rude to people, particularly their parents. I just remember hearing an 18 year old kid, around Pontiac, a few months back telling a middle aged man on the channel to "go and beat your wife old man". Yup, 11m is great for the kids too.

> It is my belief that the FCC chose the 11 meter
> band for citizens because of the reactions it has towards weather, sun
spot
> cycles, time of day, etc.

That maybe your belief, but the facts are different about how 11m CB came about. In fact some of that history was covered in a back issue of QST not long ago. I guess you didn't read it, or forgot about it.

>The FCC doesn't have
> the funds or the manpower or the time to police the 11 meter band. From
> what I understand, they act upon complaints of the people.

The April issue of QST has an article, starting on page 28, about the new DF stations being put in to service by the FCC. Now skip ahead to page 32, the first paragraph in the middle column, reads:

"The results, to date, have been nothing less than astounding. While the details are not available because the records are sealed by the U.S. court system, the first week's operation of the Florida HASSEL site netted seven freebanders, ten high-power CB operators, three amateur "police"....."

Skipping down the paragraph a bit more.

"Federal authorities seized the equipment belonging to all of the freebanders as well as to the operators of the high-power CB stations. Three of the amateur operators had their licenses suspended for periods of up to five years;....."

Hum. Sounds like the FCC has some money, and they are busting people. They have five other state-of-the-art HF DF stations like the one above, in Florida, in operation in Alaska, Maine, St. Louis, Seattle, and the last one now going operational in Nevada according to the article.

> I tell my children daily that I hate tattletales.

So you believe that telling the local police about local drug dealers is being a "tattletale"? With your logic as long as they are not selling the crap to your kids you don't care right?

>I hate whiners.

I don't like people who don't have any spine to stand up for what is right. It's too easy to look the other way and convince oneself that somebody else will take care of it. Hey buddy, that somebody else is each one of us, like it or not.

> What could be worse than a constant complainer?

Somebody who could care less about anything, and lets it all go down the crapper.

> A Ham that likes CB? It's a hobby, not a lifestyle.

CB was intended to be a short range communication medium for use by the public to conduct personal, and business related activities. It was never envisioned to be a "hobby radio service". Words to this effect were in the FCC's reply denying the Alan Dixon petition to remove the 150 mile communication limit for CB Radio a while back. The FCC did say that if one wants a "hobby radio service" that is what Ham radio is for.

> Most CB'ers don't have access to the other bands

Sure they do. They can get a Ham license just like you and I did. The Tech license is so easy to get you would almost have to be brain dead to fail the simple test.

> and really don't want to talk on the other bands.

OK fine. But if that is their choice then they have to live by the Part 95 rules. They want to run more power, more bands, get a Ham license, and as you said above they can stop "whining" about the limitation of the Part 95 rules then.

> My call sign is KF4UNF and if you ever hear me on 10 meters, give me a

Yeah, OK, I live in Madison Heights, 14 mile road and Interstate 75. Just an hour south of you. You can find me on the 444.000 (PL=100 Hz) machine at times. I know it works at 32 mile road and Van Dyke, which I think is close to you. You can also find me from time to time on 2m sideband, or 6m sideband.

My answer is Yes, and No. Since you have a magnetic mount antenna, then of course you need to find a steel surface to mount it. Since you are only receiving and not transmitting on the antenna, the lengths and the efficiency of the ground plane and the antenna itself in this situation are not critical. The antenna system uses the ground plane as one half of the receive-transmit antenna, BUT, it shouldn't take much to receive the NOAA signal pretty well.

Source record: 78049

Heck, you can tune ANYTHING without the cutters. Get an antenna tuner.
Works great. My best antenna was several hundred feet long of 8 ga wire.
Simply tuned the thing. Worked the US on 160 at night, all of Europe most
anytime with 65 watts of AM, and broke into a net in the South on 80 running
MILLIWATTS.

73 from Rochester, NY
Jim

ps - SWR ain't all that important. Guess what a 1/4 wave whip over salt
water runs for impedance. Way under 40 ohms, guys!

3422. Re: See ... what? Your on thin legal ground, mate!

If I buy one of these Cobra 2000 GTL's will it make my penis larger? I
need to know this because lately I have been suffering a lot from people
making fun of me. No one pays any attention to me any more, even when I
write articles touting the joys of freebanding in SPORADIC WAVES. I need
a little boost and I hope that a CB with lots of watts might help my
tattered ego. I am also depressed because I had to sell my stolen PING
putters, a bunch of Falcon parts, a few old albums, some Nazi
memorabilia, and other of my stolen, er, borrowed treasures. My little
weewee-penis is continually shrinking...shrinking...shrinking. What can
I do except write page after page of absolute malarkey in hopes that
some ignorant dipshit wlll think I am a good guy? Will the hurt never
end? Please someone, help old Twistedhed.

3434. Re: amp wiring question

Newsgroup: rec.radio.cb
Date: 2001-04-09 01:45:48 UTC
From: Bill Eitner <kd6tas@netzero.net>
Message-ID: <9ar4nr$6chfi$2@ID-7206.news.dfncis.de>
Source record: 78059

I prefer to run the positive and negative DC wires to the opposite ends of the battery cables. In other words, run the red to the starter solenoid and the black to the engine block. Doing so usually decreases the amount of wire needed (which lowers resistance and improves performance) and lessens the need for periodic maintenance due to corrosion buildup.

As for using the frame, only do that if you're absolutely sure there is a very low resistance (as low as if you actually ran the wire) path back to the negative battery terminal that can carry the amount of current that the amp will draw.

Remember, the heavy negative battery cable doesn't go to the frame--it goes to the engine block. There are thin wires or thin copper braid connecting the vehicle body and frame to the negative battery post or the engine block. Considering the amount of current involved, frame grounding the amp may increase the under-load voltage drop seen by the transistors in the amp. That of course decreases the amplifier output. You'll have to ask yourself whether the savings in time and materials during the installation is worth it or not.

Around 400 peak in a typical set-up.

The good news is that it's a 4-pill with no driver.
That means it can handle more input drive power
than a 2-pill. Those amp also respond well to
transistor changeovers (they didn't originally come
with 2879s) and tuning for competition. They also
have some nice features (adjustable SSB delay and
pre-amp gain, a meter, removable control head, and
a thin, easy to stash under a seat chassis).

It's worth a buck and a quarter shipped if it works
and isn't too beat up.

Actually, it's a strange value of disc capacitor.

Magnet mounts should be kept below 100 watts if you don't like
burned paint. K-40's can't handle much power anyway.

Hi, (Or should I say break)?

I'm using a Radio Shack (REALISTIC) TRC-216, 40 Channel Citizen's Band Transceiver, {Walkie Talkie}[Hand-Held] As a Base Station, (Plugged into wall with 12 volt adaptor). I'm using the supplied antenna, no out door antenna as of yet.

I live on the 7th floor of a 9 floor apartment building.
My question is how far can I get out on this unit?.

Or can I just talk to the locals, {{ SHOT THE SKIP ONCE AND TALKED TO SOMEONE IN MICHIGAN}}. Just so everyone knows, I live in Toronto,Ontario (Canada)...

I thinking about buying a new (proper) Base Station,What brand to buy? What brand not to buy? , should I buy new or used, (Money's a little tight) at the momment.

Thank-You and 10-4

XM4138221 : From Toronto,Ontario (Canada)

Also, if you thoroughly read the article in CQ, and then note the date of publication, all will become immedaitely apparent to you. Happy April Fool's Day.

3441. Co-phased antenna question

Newsgroup: rec.radio.cb
Date: 2001-04-09 03:38:08 UTC
From: Dave Adams <dladams@BLOCKsonicSPAM.net>
Message-ID: <b2b2dt4eebajjes6un9rq58ecdjo9dv14h@4ax.com>
Source record: 78066

I'm running co-phased firestick 5' antennas mounted on the bed rails of my pickup. The antennas are about 5'6" apart and connected with an 18 foot length RG-59 co-phase harness from firestick. I have been unable to get the SWR down below 1.5:1. It runs about 1.5 over most channels going up to 1.6 on channels 1 and 40. Is the 1.5 SWR due to the fact that I'm using 72 ohm coax on a SWR meter intended for 50 ohms? (72/50 = 1.5:1 more or less) Is this typical for this kind of a set-up? Or do I have a grounding problem of some kind?

3442. Somethings to think about.

1.5:1 is just fine, leave it there. The time and effort spent to get it any lower is wasted effort as any difference in your transmit or receive signal will be for all practical purposes unnoticeable.

Yeah, I know this is effectively "good enough", putting out 96% or
so.... but I'm a tinkerer. Also, my best SWR of 1.5:1 was only
achieved while parked on the flats right next to the bay. Under
"normal" highway conditions it runs around 1.8:1 and if there's
buildings nearby it goes to 2:1.

I had considered the possibility of adding a small amp of 100-150
watts or so and 2:1 SWR might be pushing it.

Just wondering what others have found to be a typical SWR for this
type of an installation.

Dave,
The typical SWR for your type system, if done corretly,
is around 1.0-1.5:1. No idea what's not 'right' with your
antennas but you do seem to have a problem. Even if you
get your matching problem taken care of, the spacing isn't
what it ought to be so the overall efficiency of the system
is in the 'crapper'. Good luck...

Gerard,
If you can run the ground wire back to the battery
conveniently, do so. If not, then run it to the chassis.
Make sure the battery is well grounded to the chassis,
and don't worry about it. If you use adequately sized
power cables, it shouldn't make $.20 worth of difference
either way.

The banner above the article's title reads:

"For years amateur operators and other users of the HF bands have decried
the general decline in respect for international agreements governing the
use of the radio spectrum. Pirates, "freebanders," and amateur "police"
abound. Now at least one administration, the U.S., is turning up the heat on
these scofflaws."

This does not sound like an "April Fools" joke article to me Cap'n Crunch.
And just to make things clear, the article is in the April issue of CQ, not
QST as I had miss typed in my prior post(s).

I bet some of the CBers on this news group would like to think so, but such
is not the case, it's real all right. HASSEL stands for "HF-Angle
Single-Site Emission-Locator". The article was written by a Professor Emil
Heisseluft at the Lauton Institute, Grossmaul An Der Donau, Austria. He can
be reached at heisseluft.emil@mashuga.orf.ar. The professor claims a
transmission time as short as 0.05 seconds is all that is necessary to
locate a HF station using the new equipment. Some of the work appears to be
the out growth of work done for the military to locate enemy ships at sea.
Now he is working with the FCC to bring these new HF direction finding
stations on-line here in the U.S too. Things are going to get just a tad bit
more interesting for some people it seems. For those who like to gamble,
play cat and mouse, with the FCC the stakes just went up a few notches.

Disregarding the age-old debate over co-phasing mobile antennas, I'll certainly say that an SWR of 1.5:1 is more than acceptable for any station, mobile or otherwise. The effort it would take to get it lower than that would be worthless compared to the benefit, if any, you would derive from doing so. In many mobile installations, even 2:1 or 2.5:1 can be acceptable, and is often typical of basic mobile radio/antenna combinations. You're doing beautifully with 1.5:1. Be happy with that reading, it's quite good.

To Whom It May Concern:

As far as we know Leland Scott has done nothing except to occasionally speak out in disapproval of illegal CB operation in this public forum. He is not now, and has not ever participated in organized Anti-KeyClown or TwistedhedTweakers actions.

To the best of our knowledge, he has posted nothing under any screen name except his own. We who opose *Twistedhed respect Leland for his views and wish to go on record as stating that he has no ties to us or any other AntiKeyclown personnel. We are soley responsible for all tweaking, baiting, and embarassing of Twistedhed.

Mr. Twistedhed has, as usual, succumbed to his own half-baked and deluded theories about who is doing what to whom. He has barked up many trees, all of them wrong. It has been a pitiable, laughable spectacle, and one that we have enjoyed immensely.

But now the time has come for Twisted to apologize to Leland Scott. Following this, we advise him to spare himself further shame and embarassment and leave this newsgroup for good.

Sincerely,

Anti-Twistedhed Group

Special announcement about the 3 special kids!
Folks, you need the following book...Twistie, tnom and Scottiekins have,
with adult supervision,drooled into a dictaphone the following masterpiece
of authorship and
it is now available at your local book store...Don't miss "Muskrat Love",
the heartwarming story of
3 illegal CB'ers who find love and marriage through uniting in hatred for
Leland, the mean 'ole hammie they wish they
were 1% equal to in quality of flame issues.
While their Sparkomatic and 2 pill amp combo splashes all 40 channels and
into 10 meters, listen to the 3 sweet little CB'ers plot, plan and generally
scheme to out flame the greatest flamer of all time. Read about their use
of electronic components as aids to their sagging libido's. Learn why no
female relatives ever come to visit. Look at the special 13 page photo insert
that shows the dried snot on their microphone! This and much, much more.

Folks, this book is on par with the smash hit "I am not a faggot", by Dweebo,
and will become recognized as a major literary accomplishment. The trippin'
trio have outdone themselves this time, and you have just gotta read it to
believe it. Only 29.95 now at your local bookseller!

This version of the newsgroup I sometimes use is great: I see ABSOLUTELY NO messages from "Twistedhed" (what a nick, I wonder...). Besides, anyone who can use his or her (ladies here, maybe?) head, know the truth about the illegals' actions, their rec-radio-cb group and so on. I simply busted their security wide open, and they seem abit sore, maybe even a bit touchy, don't you think?

The basic facts remain: legal radio is a good hobby for anyone, and the illegal variation is only another form of immature thinking.

I'm NOT a better person, because I have a callsign - I do not think that way. I only do legal radio stuff and enjoy it, I keep on teaching kids about ham radio, keep on building antennas and I can come to ANY newsgroup I like, thanks to modern technology. I can sense some irritation in the illegals' group - aren't you ashamed of the fact that a ham this far from you on the map could reveal your secrets? Rest assured that I will also forward bits and pieces from your group every once in a while - you can't stop me. The present messages in rec-radio-cb are a laugh - I'm waiting for better stuff for the readres here.

You can also write any amount of BS about me, maybe it will become your new hobby after the sunspot minimum renders you into no-harm, no-skip Cbers with illegal equipment helping you very little. Or are you going to start using cell phones to work the world?

And, finally: if you hear any Finnish CBers on ham frequencies, drop me a line and in a matter of a few days the guys will get a visit from our equivalence of the FCC. During the time I've been a ham, I have never, not even once heard them come to ham frequencies - the worst they do is to work on the illegal CB channels above 27.405 - same as many American Cbers tend to use.

73 to the legals
nuthin' to the illegals,

Your ham friend in Finland

While QST has, for many years, run a fake ad or article in the April issue, the subject matter has always been light and it has NEVER dealt with topics which would be widely misunderstood, especially in the area of enforcement.

Examples of past spoofs:
*Advertisement for the Original Carton Company. ("Command higher prices for your used equipment!")

*How to convert Cycles to Hertz. (Complete with several conversion graphs and charts).

If CQ decided to run April Fool's jokes, I hope the Editor is be responsible enough to follow the League's lead. In every article I have seen, there usually is a clue that sharp readers pick up. If they miss it, the Editor straightens it out in the very next issue.

Everyone figured out the Cycles to Hertz article. Many wrote to complain that QST omitted the address for the Original Carton Company. And a few "claimed" they built the super-stable VFO in one April article. (The VFO was extremely stable. It was a crystal-controlled frequency standard that never actually changed frequency. All the other tuned circuits cancelled each other!)

>It is my belief that the FCC chose the 11 meter
>band for citizens because of the reactions it has towards weather, sun spot
>cycles, time of day, etc.

The 11 Meter band formerly was an Amateur allocation. It was under-utilized for many reasons.

Frist, Ten Meters is a very large band, so additional frequencies were not needed.

Moreover, 11 Meters is not harmonically related to the other Amateur bands. This was very important at the time. Crystals for other bands would not put you on 11 Meters. (Take 3510 and multiply it by 2, 4, or 8 to see what I mean).

Antennas for the harmonically-related ham bands did not tune well on 11 Meters. (See the 3510 example).

Hams did not need 11 Meters then, and they don't want it back, now.

> Does that mean that the government couldn't use
>this band and since there were no buyers for the band they threw it to the
>people as you would throw a dog leftovers? Probably.

All this took place decades before the concept of Spectrum Auctions appeared. The public needed a short-range, test-free communications band. Prior to 11 meters, there were things like Class A CB in the UHF region, but equipment was expensive and unstable. Even the mobile phone industry was still on 50 MHz, with gusts up to 150 MHz. Into the late 1960's, UHF gear required almost constant attention from skilled professional technicians to maintain output power and receiver sensitivity. A lower frequency band was needed.

>The FCC doesn't have
>the funds or the manpower or the time to police the 11 meter band.

While there is some truth to the funding issue, the money IS there to follow up on complaints. You probably could operate a RCI-2970 for many years without hearing from the FCC. But, if your fellow CBers complain that you are disrupting communications, you will get attention. If your neighbors complain about interference to their consumer electronics (and you are found to be using a non-type-accepted radio), you are in trouble. If hams complain that you have slipped above 28.0 MHz, or that your signals splatter into the Amateur Ten Meter band, you will get lots of attention you'd rather not have!

> I tell my
>children daily that I hate tattletales.

Please do not report the break-in at your home, nor the theft of your car. We all hate tattletales. Plus, this is consistent with how you advocate we handle

CB outlaw activity where they "break into" Amateur bands and "steal"
frequencies.

> I
>would love to have enough money to afford a 10,000 watt amplifier with four
>alternators and 10 batteries..... Hell, I have bills to pay. If I
>had that much time and money, I would probably find something else to buy.

A little friendly advice: Don't get in the position of several CBers whose wives said (while throwing them out), "You never had money to fix the brakes in my car, or the kids' teeth, but you have $7,500 to pay a fine to the government for what you did with that #%&*@ radio!"

> So every time a NASCAR race
>was on I made sure I was transmitting.

Your true character has been revealed. I hope all those who wrote, "Good post, Gary," took note of your attitude. They are now on notice that if you interfere with them, they should not ask for any consideration. If they do, you will cause even MORE problems. And you will refer to them as a Nazi, ass-wipe, complainer, Bible Thumper, self-righteous, or tattle-tale. (These vocabulary items were lifted from your posts. You have lots of great words to describe those whom you don't get along with).

My interest in radio communication began in the 1950's. I've been a licensed Amateur since 1961, and in CB since 1962 (KCJ-2853). Historical information given above is written from the perspective of having "been there" when it happened. And I am a professional tattle-tale and whinner. Do not try this at home. :)

I screwed up on the magazine's name. The correct magazine is "CQ" April 2001
issue on page 28. My fault. Oh, that Laser antenna article was fun to read
in the other magazine. 8-))

I believe the proper spacing should be as close to 1/4 wave as possible, to get the full effect of the co-phased array. Anything closer is going to create unwanted reactance between the two elements.

I know that many folks hate eBay, but that might be a good place to look for your Metrotek CB gear. I see Metrotek sets listed on eBay fairly often. I collect and restore Raytheon, Apelco, and Webster CB gear. the majority of my collection has come from eBay auctions, and I have not had to pay high prices for any of it so far (and I WON'T, if it comes down to that; I don't need the stuff bad enough to over-pay).

Too much emphasis is placed on getting the swr to 1:1. There will be no noticeable difference in the signal if the swr is 1:1 or 3:1, the main consideration about swr is the equipment, solid state finals don't like to work into a high swr.

Dave Adams wrote:

So every time a NASCAR race was on I made sure I was transmitting.

Your true character has been revealed. I hope all those who wrote, "Good post,
Gary," took note of your attitude. They are now on notice that if you interfere
with them, they should not ask for any consideration. If they do, you will
cause even MORE problems. And you will refer to them as a Nazi, ass-wipe,
complainer, Bible Thumper, self-righteous, or tattle-tale. (These vocabulary
items were lifted from your posts. You have lots of great words to describe
those whom you don't get along with).

My interest in radio communication began in the 1950's. I've been a licensed
Amateur since 1961, and in CB since 1962 (KCJ-2853). Historical information
given above is written from the perspective of having "been there" when it
happened. And I am a professional tattle-tale and whiner. Do not try this at
home. :)

QRM

Wow. Didn't know you would take it this way. The NASCAR bit was for
a friend of mine that hates it. Only semi-true. I did initally interfere with his
television reception, but rather than him coming over to my house and asking
like an adult, he decided to contact all of my superiors. I did wonder about
why he just didn't come over and ask me to stop. I did not intentially interfere
with his reception after being notified. Lighten up a little, this is only chat.
Believe none of what you read and half of what you see. Kinda like the big
fish story...

For Sale:FT-101 accessories, YC601 Freq Counter and FV101B external VFO.
The counter has a few scratches and the VFO has a blemish on the model# tag.
The are in great working order and were used regularly. Check out pic at
http://members.aol.com/~jimmoci/ft101.jpg
YC-601 is $160 + shipping
FV-101 is $125 + shipping
The rest of the equipment in the picture is not available for sale.
Thanks!
Jim

Hey Jim,

Why are you selling this amateur rig in rec.radio.cb?

Hey Roger, the police are required to monitor channel 9 as it is the
mandated emergency channel, and if you are in an area with an active
REACT team they will also be monitoring channel 9. have a safe trip
hopefully you will not need any help.

Actually, RCI finally built a decent version of the radio when they came out with the 2950dx and 2970dx. The difference is like day and night. I used to hate to see one of the old 2950's come into the shop because so many were plagued with intermittent problems. So far, this unit looks to be everything they were supposed to be in the first place. I personally run a 2970 dx in the mobile with just a wilson 1000 mag mount and am having excellent results. 150 watts pep on SSB and AM is no problem.

The "electronic key" should be supplied by the dealer at no charge. RX sensitivity is excellent across the entire frequency range. Yes this is a biased opinion. I sell them and I personally own one that I run in my Mitsubishi Mighty Max Mobile. I like it, your mileage and opinion may vary.

You might want to note that the big ham stores don't sell the version that has the berg connector available for the key to plug into. The "CB" type shops have the convertible version, now ain't that a coincidence!

It could be Dick. Funny thing is I have seen the technical details with similar capabilities used for cell phone sites as I mentioned before in RF Design. So if it is a joke it hits so very close to what can be done it's not funny.

QRM for a guy bragging how long he has been a ham you don't understand harmonics in the least among other things..
the first harmonic of 3.510 would be 7.020
the second harmonic of 3.510 would be 10.530
the third harmonic of 3.510 would be 13.840
the fourth harmonic of 3.510 would be 17.850
and so on.

So for 27 mhz first harmonic is 54 mhz
second is at 81mhz
third is at 108
fourth is at 155 mhz.

"Qrm2000" <qrm2000@aol.com> wrote in message

99% of the time it is on 27.580usb where i do my operating. on 11 meters we use our own sort of dxcc system so its easy to tell where a station is from. i have no reason to work on ham bands while we have these great freeband freqs for our use.

>
>On the ham frequencies? Really? Using which calls? How did you know they

3583. Re: Co-phased antenna question

Newsgroup: rec.radio.cb
Date: 2001-04-09 22:07:48 UTC
From: Mad Dog <lgssl@netzero.net>
Message-ID: <9atde9$6oj8b$1@ID-20128.news.dfncis.de>
Source record: 77957

I totally agree with Jay, the antennas are probably too close to the cab of the truck causing a
unwanted reflection which is driving the SWR up. I would move the antennas 1/2way between the cab and tailgate.
Co-phased antennas need to be a 1/4wave apart or better in order to reap the full benefits of
co-phasing which is increased gain in the front and back direction.
Co-phasing 75ohm coax allows the radio to see a unbalanced 50ohm load Impedance.
A co-phasing harness is simply a matching network that permits maximum power transfer
between the source and the load. You should realize that co-phased antennas split the available power amongst themselves. Under ideal conditions a 4watt radio will send 2watts to each antenna.
In the real world they see even less, 1.5:1 is the minimum SWR reading that you should strive for.
A 1:1 match is not possible but try for a 1.1:1, linear amps. die quickly operating w/a high SWR.
In a nutshell, why co-phase? A single antenna properly tuned will outperform the co-phase rig in
all directions-front,back and sides. Mount a 1/4wave whip at the back corner of your bed and
you will get out just fine. Leave co-phasing to the semi-trucks w/the west coast mirrors which are
able to space them properly. Amplifiers only make you louder, the antenna is the heart of any good
system.

It's only illegal when used to transmit on 11 meters.
Can't paint much of a clearer picture than this, can I?
Don't transmit with it there, and you will be fine.

>aaawww poor vhf is CB the only way you can get on HF

I forgot, you are probably not familiar with the bands that hams are allowed to operate on. On my current license, I am only allowed to communicate on 6 meters (50mhz) and above. I guess since CB is in the HF band, you are correct. I can only get onto HF by CB, although it is not like ham radio on HF. Most ham HF communications are done either on USB or CW (morse code) with a little on AM, whereas most CB stuff is done strictly on AM, with a little bit of SSB. Then again, the same holds true for you, since you do not even hold a ham license.

Tim,

We are in the process of collecting a whole bunch of recordings of you on 27.580 usb, and other 'freeband' frequencies. These tapes along with the info posted on your web page will be enough to get the FCC's attention. We will make a very convincing case that you are the ideal 'poster boy' to make an example of.

timnebo@aol.comLOL (Tim) wrote:

You don't know much about harmonics yourself.

A harmonic is a multiple of the fundamental frequency so technically there is
no first harmonic as that would be the fundamental frequency.
The second harmonic of 3.510 is 3.510 X 2 = 7.020
The third harmonic of 3.510 is 3.510 X 3 = 10.530
The fourth harmonic of 3.510 is 3.510 X 4 = 14.040
The fifth harmonic of 3.510 is...well you should get the drift by now.

The 'first harmonic' harmonic of 27MHz is 27 X 1 = 27 MHz
The second harmonic of 27 MHz = 54 MHz.
The third harmonic of 27 MHz = 81 MHz

And so on.

Hi Roger
I have been on the CB since 1979. I have used the CB for many life threatening accidents. I have only once got contact on CH-09, the official international emergency channel. CH-19 may be the best one because almost all of the over the road truckers are on that one. You may be able to jump in on a convoy or get updates from truckers going in the opposite direction to you.

I used to see an upgrade kit for those mics so you could turn a
non-amplified version into an amplified version. I don't know where (or if)
you can buy them. I have seen them for sale on the 'Bay a few times. Most
recently about 3 months ago. You may want to just polish that one up, if
it's nice looking, and use it as a display. Buy a used one off Ebay for
around 30 to 40 bucks. They are out there. The kits I saw went for around
that so buying a working used one may be the way to go.

Not necessarily true.

Assume that you have a 1/4 wave vertical antenna over a perfect ground plane. The impedance will be around 30 ohms at resonance - or about a 1.5:1 SWR.

Now, tune off the resonant frequency and the input impedance of that antenna is going to rise. Somewhere, you will hit 50 ohms, and find a perfect 1:1 match.

That is why it is best to tune the antenna using a relative field strength meter - places several wavelengths away from the antenna. Instead of tuning for minumum SWR, tune for maximum field strength.

On the other hand, most of the antennas with loading coils are designed so that the input impedance is approximately 50 ohms at resonance.

: It could be Dick. Funny thing is I have seen the technical details with
: similar capabilities used for cell phone sites as I mentioned before in RF
: Design. So if it is a joke it hits so very close to what can be done it's
: not funny.

The TDOA technique for cell sites does not seem to meet, at present, the accuracy requirements for locating cell phone users. The accuracy is improved if the call can be received by two different cell sites, but still is on the order of 100-200 feet, if I recall the most recent article I read in one of the trade magazines.

Now, if you could force a Ham/CB station to transmit at a known instant of time, as is possible with a cell phone - then you might get similar accuracy.

It sounds a lot like an "April Fool" article to me. Further, I have not seen any FCC notices of actions taken - which would have been published along with all the rest of their enforcement actions.

But such techniques could be used to determine a general area. Mobile vans could then be used for the final location determination.

From: Bill Nelson <billn@spock.peak.org>
Message-ID: <9au5eq$ar3$4@bashir.peak.org>
Source record: 77979

: I'm running co-phased firestick 5' antennas mounted on the bed rails
: of my pickup. The antennas are about 5'6" apart and connected with an
: 18 foot length RG-59 co-phase harness from firestick. I have been
: unable to get the SWR down below 1.5:1. It runs about 1.5 over most
: channels going up to 1.6 on channels 1 and 40. Is the 1.5 SWR due to
: the fact that I'm using 72 ohm coax on a SWR meter intended for 50
: ohms? (72/50 = 1.5:1 more or less) Is this typical for this kind of
: a set-up? Or do I have a grounding problem of some kind?

No, the 70 ohm coax is necessary. The impedance looking into the coax
from the radio would be about 50 ohms, if everything else was perfect.

There are any number of other factors that can cause the mismatch. Your
antennas are too close together, meaning (if I recall correctly) that
the input impedance is too low. Also, if the antennas are close to the
cab, then that will also affect the impedance.

Don't worry about the 1.5:1 SWR. It makes little or no difference in
how strong your transmitted and received signals will be. The main
concern is that your transmitter can handle the mismatch, and there
will not be any problem with such a slight mismatch.

Yep, Tim. There's the little one per cent that causes the problems, as you know. Of course I know that Finland is e.g. 56 Alfa Tango and so on (I wouldn't call it DXCC, though), but to know for sure where a guy is actually from is another thing, since anyone can use any CB handle they like.
If no CBers came to ham bands, you would never have read any of my messages in this ng.
Thanks for a decent reply, Tim. Kari

Gary,

Even better. How long can we write about antennas, propagation and such before some idiot brings up amps, how to wire amps, how to build amps, how to get more power from amps, how to mod CB finals for more power, how much power they have ever run, how many watts a certain amp delivers, or other illegal-for-cb topic.

I'm betting it'll take no less than 3 messages.

Lenny :)

That's the way I was taught and the way most articles read. I would
suspect that the poster is a musician because that is their convention.
WTH in electronics we use j where everyone else uses i and economists have
a bad habit of putting the independent variable on the vertical axis in
their graphs.

Add a little variety to life. And a little confusion.

Dick NBK

Do you really think that I would be ousted by the child like writings of
you? Do you think that the negative writings of a few Hams or CB'ers would
even bother me? My post was meant to start a discussion. It did with
harmonics. There are a few that did not take too kindly to my post. Those
individuals must be the ones I was talking about in my post. I can't
believe someone compared drug dealers to linear amplifiers. Then they
respond to my post with fake email addresses. What are they scared of?
Scared of being found out that they are the trouble makers in this news
group. NASCAR still sucks, Mean people suck, and self appointed air wave
police suck. I can't believe how a few people in this news group let typed
words bother them so much. I bet they go to work wondering what someone
typed about them. I will continue to post here weather or not QRM2000,
MOPARHOLIC, or Leland C. Scott like it or not. To be honest, I bet those
three are the ones causing all the trouble on this ng. I guess I hurt
someone's feelings when I mentioned that I like amps. They compared it to
all kinds of crimes and even called me a criminal. I bet if I took the amp

and beat them about the head and neck it would be a different story. I bet most of the problem children on the ng are just that, children using their dad's radio equipment.

later...

Newsgroup Checks are issued Monday-Friday, from 6 PM to 9 PM by
appointment only.

If you'd like to set an appointment, please call 1800-555-5656.

When the Bitch answers the phone, give her your name, your CB handle,
Make and Model of your Computer, your mailing address, and a credit card
number. We accept Visa, Master Card, American Express, Diner's Club, and
Discover.

When I get in to the office, the Bitch will give me the message, and I
will promptly issue you your Newsgroup Check, freshly wiped in the Crack
of my ass.

This message was brought to you by Kotex. "We're not #1, but we're up
there!"

::grin::

>>For months now a group of do-gooders have been invading rec.radio.cb and trying to discredit freebanders and other alternative cbers by posting trivial legalities and FCC rules.

Violations of FCC rules and regulations and the International Treaties to which the United States are signatory are NOT "trivial legalities". No more than slipping my hand under your 17 year old daughter's skirt would be a "trival legality", even if she is about to turn 18 in a week.

Freebanders are a discredit to themselves. They don't need anyone else's help.

And "alternative cbers"...?!?! Gay persons with radios? So who cares WHO they sleep with as long as they use the radios legally...?!?!

>>We who are serious about the CB hobby are sick and tired of this flak.

Then stop breaking the law. Stay on the legal 40 channels. Stop running linear amplifiers. Stop running more than 100% modulation. Stop using profanity and creating willful interference, etc etc etc ad nauseum.

>>We know what we do is illegal. We simply don't care.

Then since this is a willful act, you won't mind doing some jail time for it. And if you think the DoJ won't put you in jail over "trivial legalities", I suggest you do a search in Amateur Radio archives about "WB6JAC" and see what can happen.

>>Furthermore, we have the right to do what we want WITHOUT anyone acting all high and mighty and telling us we are breaking the law.

No, you do NOT have that right. Please show me where in ANY codification of US law it says anything of the sort.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

What does the frequency one transmits on have to do with their sexuality, or sexual preferences? Equating freebanders with homosexuals is akin to equating HAM's to crusty old men who sit in dark rooms with only the glow of their amplifiers' tubes to guide their fingers in adjusting the dials on their Heathkit radios and...

Wait.. that's a poor analogy.

Equating freebanders with Homosexuals is akin to saying that ALL Nurses are Women.

A misconception here, perhaps? There is no LAW restricting persons from transmitting wherever they please. No governmental lawmaking body has passed any legislation restricting the frequencies upon which one can transmit. The FCC is a Commission empowered by the US Government to organize RULES restricting where a person can transmit, what they can transmit with, and whit how much power they can transmit.

So technically, your statement is flawed. No laws are being broken by the power mongers or the freebanders. FCC rules are being broken.

>

Jail time? Perhaps after someone is unable to pay a fine levied for breaking said rules... unless what they did endangered public safety, such as interference with FAA frequencies, which can, and most likely will, be prosecuted by the DoJ.

>

This is the first statement in your post that I have agreed with.

Don't get me wrong, here, Steve... I despise those who run big power "dirty"... but I see no problem myself with running power if you make every effort to minimize the effects on others... I also despise those who would venture into the HAM bands.. People don't belong there unless they're licensed. Below channel 1 and above 27.995 is no-man's land as far as I'm concerned..

But I'm not so arrogant as to force my viewpoints upon others. It's not my place to police CB'ers, any more than it's my place to practice medicine.

Just my two cents. Your mileage may vary.

No... but you apparently didn't read the whole post.....

You can go to jail for reckless endangerment, or any one of a number of other laws when you are found interfering with communications equipment which is used for public safety, law enforcement, and the like. I did specify this further down in the post.. Had you read it, completely, you would have seen it.

Get all the facts before you jump the gun, whomever you are.

dumb (n): unable to speak

Per Websters Collegiate. You might try a bit of education in lieu of assumption and ignorance.

3652. Re: hwy emergency channel

Newsgroup: rec.radio.cb
Date: 2001-04-10 17:45:59 UTC
From: qrm2000@aol.com
Message-ID: <20010410134559.15468.00002729@ng-fa1.aol.com>
Source record: 78151

Roger asked:
>I am planning a trip, and want to know what cb channel to monitor for
>emergency road help.. I presume I should call on the same channel if I need
>help, right?
>And do police, truckers, or anyone else still monitor this channel regularly
>enough to consider it of some help?

Web Doc replied:
>Hey Roger, the police are required to monitor channel 9 as it is the
>mandated emergency channel, and if you are in an area with an active
>REACT team they will also be monitoring channel 9. have a safe trip
>hopefully you will not need any help.
>

WebDoc's info is localized to his state. Law enforcement is not "required" to monitor channel 9 in all areas.

Channel 9 has been abandonded by many of the nation's monitoring teams, including many REACT organizations. The best bet in an emergency is to establish contact on channel 19 and then shift to an adjacent channel. Remember, however, that if you are stopped (as in broken down), the stations you are speaking with will probably drive out of range quickly. You have approximately three minutes to get your message out and ask them to make a phone call on your behalf.

Personally, I would not travel without a cell phone capable of analog service on an A or B carrier. If you are fortunate to live in an area where these can still be activated, go for the Motorola Brick Phone (UltraClassic), or a bag phone. If your area no longer allows activation of these extremely powerful phones, go with one of the current, smaller models but make certain that it is either analog or dual mode.

3653. Re: CB vs. Ham revisited...

Newsgroup: rec.radio.cb
Date: 2001-04-10 17:52:28 UTC
From: qrm2000@aol.com
Message-ID: <20010410135228.15468.00002730@ng-fa1.aol.com>
Source record: 78152

I think you misunderstood what I wrote, but your response only confirmed my point.

If you want to operate on several Amateur bands, using a single Xtal, the frequency (when multiplied) should fall in the appropriate portions of the higher bands.

In the days when 11 meters was an Amateur allocation, there was not a harmonically-related ham band lower in frequency which would allow for the use of a Xtal on multiple bands.

Since you did not quote the message you were responding to, I assumed you were referring to my "History of CB Radio" post. If not, please disregard this notice. :)

Tim,

We are in the process of collecting a whole bunch of recordings of you on 27.580 usb, and other 'freeband' frequencies. These tapes along with the info posted on your web page will be enough to get the FCC's attention. We will make a very convincing case that you are the ideal 'poster boy' to make an example of.

Tim,

We are in the process of collecting a whole bunch of recordings of you on 27.580 usb, and other 'freeband' frequencies. These tapes along with the info posted on your web page will be enough to get the FCC's attention. We will make a very convincing case that you are the ideal 'poster boy' to make an example of.

There are a number of pretty good mailing list CB forums available
through Yahoo Groups. In my opinion, the two best ones are:
http://groups.yahoo.com/group/cbtricks
http://groups.yahoo.com/group/rec-radio-cb
By going to http://groups.yahoo.com/ you can get descriptions of all of
them
(something like 87 CB related groups).

Uh, there IS a law being broken. It is the Communications Act of 1934
that is being broken. FCC was created to enforce the intent of that law
by establishing rules/regulations that met that objective. Therefore,
those rules carry the WEIGHT of LAW and are fully enforceable under said
law.

Sideband,
You said in your post;

"A misconception here, perhaps? There is no LAW restricting persons
from
transmitting wherever they please. No governmental law making body has
passed any legislation restricting the frequencies upon which one can
transmit."

You might want to take another look at the "rules" regarding which
service your speaking of. Parts 95 and 97 DO specify situations when
you may not transmit, several of them, in fact. They also specify
frequencies which the various services may transmit (and in some
cases,
where you may not transmit). You might also remember that all of
these
"rules" are codified under the 'Communications Act of 19??' (can't
remember the date of the latest one). If you think you can not be
prosecuted under this Act, your mistaken. So, technically, your
rebuttal
is flawed/incorrect, too.

>
> Jay in the Mojave

Jay,
If your talking about the 'torroidal' combiner circuits used
in most (if not all) solid state amplifiers, then the answer is
yes. Torroidal transformers such as that application and the
'input/output' transformer circuits are probably the least efficient
method you can use. Would they be worth changing? Depends on
how much your willing to spend (as in an almost complete re-build).
Limiting the usable frequency range of the system will increase
overall efficiency, but that sort of defeats their reason for being.
'Doc

>tubes to guide their fingers in adjusting the dials on their Heathkit radios
and..

It was a play on the "alternative cbers" comment. It wasn't meant to be
serious.

>Equating freebanders with Homosexuals is akin to saying that ALL Nurses are
>Women.

I am used to it....OR, assumed to being GAY since "no real man" could WANT
to be a nurse. Of course, no one complains when they are bleeding, having
chest pain, can't breathe, etc.

>A misconception here, perhaps? There is no LAW restricting persons from
transmitting >wherever they please. No governmental lawmaking body has passed
any legislation >restricting the frequencies upon which one can transmit. The
FCC is a Commission >empowered by the US Government to organize RULES
restricting where a person can >transmit, what they can transmit with, and whit
how much power they can transmit.

I sincerely hope that no one takes you at your word or believes you. The
Communications Act of 1934 and as ammended has been upheld in court on
occassiosn to numerous to count. One recent "pirate radio" case in Florida
tried the same approach. It has now cost him several thousand dollars in fine,
legal fees, and has forever ruined the lieklyhood that he can obtain a
legitimate broadcasting license.

>So technically, your statement is flawed. No laws are being broken by the
>power mongers or the freebanders. FCC rules are being broken.

The statement stands. FCC rules and regulations are established pursuant
to the Communications Act. That makes them law. You can argue the
"technicallity" of the "law" all you care to.

Or, if we care to persue your logic, instead of saying "fined and
imprisoned", we can say "financially impaired and jurisprudentially detained"

>Jail time? Perhaps after someone is unable to pay a fine levied for breaking
>said rules... unless what they did endangered public safety, such as
interference
>with FAA frequencies, which can, and most likely will, be prosecuted by the
DoJ

Please follow up on my suggestions vis-a-vis WB6JAC. He did not endanger
any air traffic or QRM public safety frequencies that I am aware of. He simply
insisted on operating an unlicensed radio station contrary to federal laws and
regulations.

Don't take my word for it. Read the archives. He's been in PRISON (not
just "jail") more than once

>"We hold these truths to be self evident..... Life, Liberty, and the Pursuit
>of Happiness....." I think it's in the U.S. Constitution.

I won't argue that a bit. However the TONS of paper that have followed
since that have established such laws and regulations for the safe and prudent
regulation of national and natural resources for the good of society, like it
or not.

The Communications Act of 1934 is one of them. The electromagnetic
spectrum is a finite resource, and one in which an anarchy-like approach to use
WILL, ultimately, cause a failure of other communications systems.

Freebanders have already dislodged dozens of other users in the 27.405+
mHz and above specrum, including oil services, remote media links, military and
other legitimate land mobile users. How do you think THEY feel about
freebandeers insistance thatit's "harmless"...???

No one, least of all Americans, like to be "told" that they HAVE to do
something or that they are NOT ALLOWED to do something, but we are a nation of
laws, those laws established for the purpose of ensuring that ALL Americans
have safe, reasonable acces to any or all resources.

Freebanding is an affront to that.

>> "An America Not Preapred For War In Peacetime Will Not Know Peace In Any
Time."

>This is the first statement in your post that I have agreed with.

Thanks. Hope you took a minute to follow the links.

>But I'm not so arrogant as to force my viewpoints upon others. It's not my
>place to police CB'ers, any more than it's my place to practice medicine.

I don't consider it my place to "police" them either. However I think
this IS epidemic in nature, and it needs to be corralled. And I don't practive
medicine either. I practice nursing!

>Just my two cents. Your mileage may vary.

Thoughtfully presented and taken for advisement. Thanks.

This is the biggest load of crap I have EVER read in this NG! Where do
you find these 'rules'? They are found under Title 47 of the CFR (Code
of Federal Regulations) which is STATUTORY LAW! Yeah, I was lurking,
but I have never heard an excuse as lame as this before.

Newsgroups: rec.radio.amateur.policy

Leland C. Scott and another amateur, doug adair, have conspired among each other and have been attempting to start all kinds of trouble in another group for quite some time now. A visit to the cb room will reveal a bit of these folks true nature. Do a back search and see how doug came into the group and how he digressed from there. Leland has just recently stepped up his forging of names of regulars in the other group, targeting me because he does not agree with my political views and, well, to be perfectly honest, he is a bit troubled. Leland has posted under the names "Punisha-of-keyclowns", "keyclown killa", many,, many anonymous names and cotse names, as well as a host of others. He has consistently trolled and posted filthy pornographic items to the cb room and has been forging many regs on there for quite some time, shamelessly letting another licensed fellow amateur take blame. I am a cber, but I have many ham friends. I do not use foul language, I do not use excessive power, and I do not trespass into ham bands. I feel the amateur community needs to be made aware when one of their own can not hold their contempt without stooping to such tactics. Beware this Leland, fellow. It is he that blackens the eye of good will between ops and his type that wish to foster animosity between cbers and ham ops. I invite any of you to peruse the cb room threads, see how Leland was caught red-handed, and make up your own mind. If a post contains obscenities, it was more than likely forged by Leland. This is the only post I shall make. Any others are forgeries. Have a good day.

3697. Rec.Radio.CB= New Home for a Mental Case

Newsgroup: rec.radio.cb
Date: 2001-04-10 21:31:37 UTC
From: tnom@mucks.net
Message-ID: <ftt6dt4sqcre2tpk5otpmt71a8o60pk4vi@4ax.com>
Source record: 78176

Notice I said A mental case. As in singular.

Unfortunately mental illness does exist. The author of these randomly signed uncalled for posts is obviously a disturbed person. We all by know who this poster is and we should be sympathetic to his illness. It is sometimes to easy for us to take our own normalcy for granted. He doesn't know such normalcy. He only knows a world of his own demons. Demons who make him continually lash out at others for no apparent reason. It is therefore up to us to understand that he can not help himself. That being the case all we can do is ignore him, pray for him, and hope that he seeks the mental health services that he really needs.

3698. Block Sender

Newsgroup: rec.radio.cb

If you don't like the low level of childish dribble on some of these posts
and you use outlook express
1: click on offenders message

2: Select from headers "Message" then "Block Sender" then "OK"
Easy isn't it.

Adrian

3701. Will the harrassment stop? All targeted victims must read!!!

Newsgroup: rec.radio.cb
Date: 2001-04-10 22:22:25 UTC
From: Scooter <scooter@skipland.zzn.com>
Message-ID: <%yLA6.457$6P3.4395@newsfeed.slurp.net>
Source record: 78178

This newsgroup has been a project for a group of people in the past few weeks. Namely all professionals who have interest in radio comms. Wondering who and why?

We have three lawyers and two computer specialists that own there own isp. They have tken this group under their wings, and involved some friends that specialize in internet crimes (fraud, etc...). They have tracked anonymous users through the great internet web (yes it can be done), they have targeted the ones who are doing all of the harrassing, they have isolated the victims, and do you know what? These are punishable crimes. Harrassment by communications, threats, I'm sure business has been lost due to uncalled for slander. It's just like over the phone, or locally and it's just as punishable. Anyone willing to press charges could, and would win. I'm sure all of this harrassment has caused irreversible damage to these distraut victims. Compensation can be had and should. Pass this along to your friends who have since left this newsgroup, and who felt they were victimized. Anyone who has received direct e-mails from the perps have a no contest case on their hands. If you lazy harrassers think you are above the law think again. To show you how it works think of this newsgroup as a large busy street, crowded with people of all ages. Think of your horrific foul mouthed posts as a passing car with the most horrific foul mouthed music coming from it's massive stereo system. No one should have to listen to that music so that person in the loud car has committed a crime and shall pay a fine. Go ahead say we don't have to read your posts, and your are above all. It doesn't matter, the people on the street don't have to listen to the music they can stick their fingers in their ears right? So it's still punishable. Deny a person their right to a peaceful newsgroup and you pay a fine.

Oh and you'll still lose you ISP. They're working on that right now. How do you like those apples?

Ahehehehahahahahah..who kicked the dog for me today?
AHAHHAHHAHAHAHHA...I can't turn my head without her whining and barking for and pining away for my attention. Anyone feed her? Damn hothead Leland can't resist, huh whacko? Sit up for me girl. Leland stands for Lee. As in hermie, hermaphroditic, androgynous Lee. Oh, are you and Doug still at it? Now slut talk me some more girlz. And cover those stinkin' muddy paws and knobby stub from where you attempted to gnaw your club foot from my #0 Victor steel trap that you so happily and obediently stepped in as I directed, you're leavin' blood tracks all over the place.
Everyone isn't as dumb as you two look. But then again, ONE of you is a college grad, right? (Chuckle chuckle giggle giggle nyuk NYUK NYUK!!!!!!!!))

When doing the IP Trace Route the key ip address to look at here is the X-Trace 207.155.223.160 this is the one that will give us what we need, the originator of the post. Doing a quick check viola. It comes back to Our friend in Ohio. His dial-up is located in Toledo. With this info I think Concentric.Net would be happy to hear about his behaviour. Or better yet a friend is going to talk to a fellow network administrator at concentric and thru the wonders of Linux and a little hacking we can have all the posting logs and info on our friend.

3709. Swap/Trade Cobra 148/Lincoln/Ranger

Newsgroup: rec.radio.cb
Date: 2001-04-10 22:45:44 UTC
From: R1 <r1s3@ukonline.co.uk>
Message-ID: <9b02efgjt1@uranium.btinternet.com>
Source record: 78185

Hey group
I want to trade one or maybe two of my SSB radio's for a decent base scanner
or a dx394 general receiver.
The Cobra 148-GTL-DX-MII is excellent condition with standard and cobra
power mike, 26.000 to 29.000 MHz all mode inc alpha's.....
Lincoln is like new, all modes 25.500 to 30.000MHz standard mike
Ranger , same specs as Lincoln also excellent condition
To trade for a dx-394, I will swap only one of the above (any one)
To trade for an ordinary base-scanner I will swap one (any one)
To trade for a top notch base-scanner (ie bc9000 / AOR,/Icom etc) or similar
I will swap the three for a very good condition one.
if interested please e-mail with details, I am open to offers.
NB, please...I do not wish to sell, only trade/swap.
thanks
Rob

So this is your way of retribution. They disrupt the airwaves and you disrupt the NG, You are the hypocrite you do exactly what you despise. You are worse than they are because you try to talk like you are high and mighty when you are beneath the people you hate. I guarantee you will be caught, I cannot say the same for the Cbers with amp because your trail of posts follow you like a bad credit report.

Hypocrytical no. I'm not defending anyone, but my rights to read a newsgroup not filled with obscenities (not that I'm above cursing, but maybe there are children around), and BS posts. Last time I checked you couldn't point a finger and say "so and so did this he should be punished" without proof. Why do people feel like they have to take law enforcement into their own hands? If you shoot someone you commited a crime. If you set a shopping mall on fire because someone in it commited murder you now commited a crime and shall be punished. If you wanna be a snitch do so, but be a smart one and keep quiet. Snitches don't last long when they have big mouths!!! Ratting everyone with big radios, and amps then bragging, and harrassing everyone won't get you a seat beside Riley. But it may get you fined, or you could end up with your ass in the hospital.

Yea? Well I got headers on Leland coming straight through mediaone.net via some damn roadrunner as well. I know what time it is. I was born on a Saturday, but it wasn't last Saturday.

I think you're an irresponsible ASS for promoting the use of amateur rigs
by CBers.

"No-contest" is a plea made by a defendant. Your misuse of the term
should make anyone doubt your claim to have three lawyers.

> If you lazy harrassers

If you have legal action pending, or if you represent your lawyers,
they should have informed you not to say anything at all regarding the
action, let alone posting such remarks as "lazy harrassers".

> think you are above the
>law think again. To show you how it works think of this newsgroup as a

>above all. It doesn't matter, the people on the street don't have to listen
>to the music they can stick their fingers in their ears right? So it's
>still punishable.

There is another legal term that is called "assumed risk", which you lawyers apparently have forgotten. In other words, if you step into a boxing ring, you should expect to get hit, and you can't blame anyone else but yourself if you do. On the contrary, if you live in a peaceful neighborhood and someone drives by pumping noise and profanity into the air, that does not fall under "assumed risk" -- it is called a 'nuisance', and is probably a crime depending on where you live.

> Deny a person their right to a peaceful newsgroup and you
>pay a fine.

There is no law that I know of that grants anyone the "right to a peaceful newsgroup". If I am wrong, please have your lawyers inform you and post it here.

> Oh and you'll still lose you ISP. They're working on that right now.
>How do you like those apples?

What if the harrasser owns his or her own ISP? What if the ISP doesn't care, or has it's own lawyers? And what standing (another legal term your lawyers seem to have forgotten) do you (collectively, since you used the word 'we' previously) have to pursue and enforce legal action, civil or criminal, without the consent of the 'victim'?

If, in fact, these lawyers of yours do exist, then by all means post their identities and contact information -- I have a few questions for them.

since youare on my side maybe you can help me? I need to track down them
that are pursuing me like a packof wild dogs. Email me [here or at
twistedhed@webtv.net]and we can talk because I need allies rightnow.

Familiar? Perhaps Leland can enlighten us on how the day when Dougy
started indenting my forges I had just finished emailing back Leland who
intentionally asked me for a way, in private of course, to distinguish
my emails from the forger. He was playing (?) stupid and I bit, telling
him the forger never indented the posts. Next day, and ever since, my
posts were indented. I know I still have the exchange between us and if
I find it I wil post it. Then, as if that isn't enough, match the timing
of the indentations of the forged posts as opposed to the timing of my
email exchanges to Leland through Dejanews. My problem has been with
Dougie up until Leland joined his little game. Kari did too, and so did
a few others, but they backed off when they saw the criminal element
they were taking on. Seems to me that only three or more now are needed
to be convicted on a RICO act, no? I mean, even if it is something as
simple as electronic harassment and libel, 3 or more involved can make a
case, especially when it has been taking place for some time by a
conjointed effort, one would think.They have been in very close contact.
I would not accuse someone unless I was 100% sure. In this instant, I
am. Leland may have eased since he goofed, but he ain't innocent by any
damn means!

You could have walked away from this at any time, or behaved as the
rest of us and not responded to his posts. Instead you have chosen to
continue this flame war to the point of obsession. Everyone can see
that your perspective is now very skewed.

Since my name usually gets included with the group you are talking
about, you might decide to include me as a defendant in your
complaint. But since you are clueless as to the scope and application
of the RICO act, your complaint will be met with one of my own for
malicious prosecution, and you will not even be able to file Chapter 7
to avoid the damages.

So, in your quest for revenge, you better be damn careful where you
start pointing your legal finger.

Usually only when your violation is combined with another offense which endangers lives or interferes with enforcement or emergency communications. If someone has gone to jail solely for violations of FCC rules, I'd like the information on the action, and court transcripts, if possible.

Please forward URL's, case document numbers, et al.

Hypocrite? I think not. Mayhap you could quote the above requested information for us, so that we may all be better informed? This is, after all, a newsgroup.

OMG! This is HILARIOUSLY DEMENTED! You *actually* have been measuring the size of the indents in posts and comparing them to other posts? Man, you are too far gone! You are like SERIOUSLY mentally ill, fella.

Maybe we oughta ease up on ya. Maybe we oughta let bygones be bygones. Maybe we ought to...

Nahhhh!

Leland was never part of it, you dope. His only "crime" was disagreeing with illegal CB and your "anything goes" idea of government by anarchy. But that was enough to convict him in YOUR mind, huh jagoffboy?

Start at fcc.gov. Click on the link for FCC regs and it will take you
to a site that has the complete CFR. Title 47 is the entire set of
Federal laws for telecommunications. There you will find all the
'rules' for CB under Part 95 (that's what they mean by 'part'). It
also has all the 'rules' for every other aspect of the FCC, including
amateur, broadcast, cellphones, RFI limitations, etc.

Now if you want to talk about case law, there are kajillions of cases
based upon the enforcement of the CFR. If there was ever a final
decision where the CFR was declared to be invalid, you would have
heard about it by now (such news, and it's consequences, would
overshadow all other news for a very long time).

You are a hypocrite because:
1) You failed to "Get all the facts before you jump the gun" when you
preached for others to do the same;
2) You are ignorant of the law, but accused others of the same;
3) You are uneducated about the law, but accused others of the same;
4) You assumed your knowledge of the law was correct, but accused

others of presumption.

Of course some of my posts will come through mediaone.net, and yes it is their roadrunner service, in fact it is a cable modem service. I know at one point by private E-mail you did ask me what was Mediaone. I kindly supplied you with the URL that explains the whole service. Of course Mediaone runs a large network, and their Roadrunner service is offered nation wide. It should be no big surprise that somebody else could be using the same service. So if this is "really" Twistedhed, you have my real E-mail address. Why don't you use it? Of course there is that little matter we discussed which I did promise I would not disclose to anybody else, and I have kept that promise. That should be enough of a clue for the real Twistedhed to figure out if this post is really coming from me or not. I'm not going to waste effort chasing down IP addresses. I have better things to do with my time.

Hello Doc: What I think happen here was the transformer was not wound correctly. I took Scott suggestion and used a larger Binocular type core (got a big box of kinds of different type cores from the TRW swap meet) and wound it as the schematic said how many turns it was suppose to have. The original combiner appears to be missing a couple of windings, and now the radio is humming just fine, and it doesn't get hot anymore.

But I know the guys have some trick trail and error proven combiners out there.

I wired up a quick combiner / spliter for the reciever, allowing the receiver to work, while having another output port so that I can use another receiver off the antenna. Works great, lets you keep an ear on 38 LSB and 14.313 & 3901 at the same time.

Yes, thats correct. The Eagle and the Magnum are designed to cover the 11 meter band also, then the factory then disables all but the 10 meter frequencies from the units. The full 454 channel frequency coverage of 25.165mhz thru 29.655mhz of the Eagle Spitfire 454 or Magnum 1010 is then re-enabled through the removal of a surface mount resistor or other component.

I have a Comanche Warrior for sale....8 weeks old. Factory fresh mint condition. This is the same radio as the Prostar 497, Titan, Albrect or the Eagle Tomahawk etc. The unit is completely stock, except for the export channel modification which entailed nothing more than clipping a resistor. 450 channels covering 25.165mhz thru 29.655mhz in all modes including FM. Channel change from the microphone. Radio does not have over an hour on it, if that. Absolute perfect as-new condition...no scratches, marks, dents or damage of any kind. Price is $115 shipped to your door. I have the best buy on a radio like this on the net...period. Comes with original box, manual, hardware etc. Allot of radio for the money. Selling to buy mobile radio.

Title 47 contains, to my knowledge, the congressional order which gave the FCC the power to regulate the airwaves... The FCC then made their rules, and submitted them to congress as addenda, which were then passed. The congressional order was never passed thru congress as a
bill, and is therefore not a Law; rather it's an Act. This is my understanding of the situation, as it has been explained to me by a friend of mine who happens to be a Lawyer.

I was asking for specific cases where someone was jailed solely for violations of FCC rules and regulations, without other charges dealing with endangerment or interference with emergency communications, et al. For example. Cite a case where someone was jailed for

transmitting on, say, 27.435 SUB, and solely for that violation of the FCC rules.

You're the one making the assumptions, Sparky. I have researched this. I'm not going to say I
have ALL the facts. Noone really has all the facts. Noone can know every facet of the law; if
they could, there wouldn't be lawyers who specialize in certain facets of the law. I never
accused anyone of being uneducated of the law, I was simply iterating what had been explained
to me by someone who is much more familiar with the workings of the legal and governmental
systems than I.

You are also assuming here, that I advocate violations of current FCC rules and regulations.
Let me go on record here and now.

I DO NOT ADVOCATE VIOLATION OF CURRENT FCC RULES AND REGULATIONS.

I DO advocate petitioning the FCC, Congress, and other involved governmental bodies to change
current Rules and Regulations for the sole purpose of opening up more bandwidth to CB'ers...
For example... I would like to see a 100-200Khz wide band open up above channel 40 solely for
the use by CB'ers using USB and LSB modes only. Interference by AM traffic on the "regular

40" makes sideband nearly unusable. If 10 to 20 channels above channel 40 were opened up for
this use, those of us who prefer SSB transmission would be much happier, and the "AM'ers"
could have their 40 channels.

This is the kind of thing I stand for. I'd like to see it happen....

So please, don't assume I'm out to break the law/rules/regulations, and to encourage others
to do the same. I am not.

Also, please don't assume to know what I am thinking, regardless of what I have written here
in this newsgroup. There is exactly one person on this earth who knows what goes on inside my
head. I'll let you guess who that person is. (Hint: It's not Bill Clinton. ::grin::)

Take what I have written in the past, and what I will write here in the future with the idea
that I'm not out to break the rules... I'm out to change them.

Some form of recognizing reality is certainly called for. Not only does
the AM/SSB issue need resolution, assigning truckers a block -- preferably
FM -- would go far to quiet the freebanding problem. Unfortunately, CB
(and Amateur as well) rank 38th on a list of 8 priorities. Not a big
career builder in Washington.

Agreed... But the fact remains that SOMETHING needs to be done about the lack of bandwidth in the CB bands, and modal interference...

Of course, I'd also like to see the SSB power limit set to 50 watts, and 25 watts on AM....

But these are just pipe dreams, I know..

I hate lawyers. Start with 0.405, 406, 411, and 414. From there you
can find all relevant material. All orders and amendments have indeed
been passed through Congress, either as a quorum or under delegated
authority.

>I was asking for specific cases where someone was jailed solely for violations of FCC
rules
>and regulations, without other charges dealing with endangerment or interference with
>emergency communications, et al. For example. Cite a case where someone was jailed for
>transmitting on, say, 27.435 SUB, and solely for that violation of the FCC rules.

For that you would need to research which laws fit your description,
search the criminal code to find out if the punishment includes
imprisonment, and then search through FCC case law (only a small part
of which can be found on the internet). I don't have the gumption to
do that, sorry. However, since the current fines are in the thousands
of dollars for a first-time offense, I'd bet my left nut that more
than a few people have been imprisoned for the behavior you describe
above.

>You're the one making the assumptions, Sparky. I have researched this. I'm not going to
say I
>have ALL the facts. Noone really has all the facts.

Well, you stated that the FCC regs are not laws at all. Would it have
been wrong for anyone to assume that what you meant to say was
anything other than what you said? Now you claim that you based your
understanding on second-hand information without verifying it for
yourself. Is that what the reader should have understood without you
saying so?

I have just given you the pointers to parts at the at the very
beginning of Title 47. In your research, did you ever think about
looking there? You can begin to either defend or dispute the
information you have been given by your lawyer-friend.

> Noone can know every facet of the law;

Probably not, but since I don't know the first thing about automatic
transmissions doesn't mean I should start telling people what's wrong
with their car.

>they could, there wouldn't be lawyers who specialize in certain facets of the law. I never
>accused anyone of being uneducated of the law, I was simply iterating what had been
explained
>to me by someone who is much more familiar with the workings of the legal and governmental
>systems than I.

You assumed that your lawyer-friend was much more familiar with FCC
law than you were. The assumption was yours, placing too much
confidence in someone else's knowledge and not verifying it for
yourself. Actually, if your lawyer-friend told you that the FCC is not
operating with any legal authority, you should probably report him/her
to the bar.

Regardless, you could have stated your point a bit differently, such
as "I heard that ... yada ... yada ... yada ... Can anyone verify
this?" Instead, you told someone that they were "dumb", quoted the
dictionary's definition of the word, added that they were ignorant,
and told them to get an education.

>You are also assuming here, that I advocate violations of current FCC rules and
regulations.

I don't assume that people spread second-hand info -- you need to say
it came from someone else, or you will have to stand behind your
statement.

>Let me go on record here and now.
>
>I DO NOT ADVOCATE VIOLATION OF CURRENT FCC RULES AND REGULATIONS.

But just a couple posts ago you advocated running power.

>Also, please don't assume to know what I am thinking, regardless of what I have written
here
>in this newsgroup. There is exactly one person on this earth who knows what goes on inside
my
>head. I'll let you guess who that person is. (Hint: It's not Bill Clinton. ::grin::)

Like I said before, if it came from someone else, say so the first
time. Backing away from a statement by later claiming it was hearsay
is a less-than-credible excuse.

Yea? Well I got headers on Leland coming straight through mediaone.net
via some damn roadrunner as well.
Of course some of my posts will come through mediaone.net, and yes it is
their roadrunner service, in fact it is a cable modem service. I know at
one point by private E-mail you did ask me what was Mediaone.

"Liar. Post it with headers so I can get my ISP to prove to your headers
are forged."

I kindly supplied you with the URL that explains the whole service.

"Oh man! You are a piece of work. So what, Leland......I picked you for
WHAT reason? If I was to start trash with someone, there are a few that
that rank ahead of you. Nice try, but no one has come to your aid,
Leleand, Not one live person with a real email address. That says it
all. Matter of fact, I have heard from several hammies who have you in
the killfile and know you are trouble from past dialogue with you.
"
Of course Mediaone runs a large network, and their Roadrunner service is
offered nation wide. It should be no big surprise that somebody else
could be using the same service. So if this is "really" Twistedhed, you
have my real E-mail address. Why don't you use it?

"Because I have nothing to say to you."

Of course there is that little matter we discussed which I did promise
I would not disclose to anybody else, and I have kept that promise.

"Well, once I retrieve the post and the world can see the date on it
cooincides EXACTLY with the time my indentations began being forged,
well, just one more COOINCIDENCE for you to explain. By the way, did you
not make a post and say to Dougie that you WERE an allie, but he
destroyed that trust, or something to that effect? Are you going to deny
you were in cahoots with Dougie? A direct question. Answer it."

That should be enough of a clue for the real Twistedhed to figure out
if this post is really coming from me or not. I'm not going to waste
effort chasing down IP addresses.

I have better things to do with my time. --

"Like playing games with Dougie. You were popped. Bottom line. You, are
a liar.""

My problem has been with
Dougie up until Leland joined his little game. Kari did too, and so did a few others, but they backed off when they saw the criminal element they were taking on. Seems to me that only three or more now are needed to be convicted on a RICO act, no?
You could have walked away from this at any time, or behaved as the rest of us

"I do not run from words, I make a living from them. SOME, can't deal with that. Forge me all over the net, then ask me to ignore? Get a real life instead of trolling the way you do.You said you were leaving. Why are you back? You can't do damage control. No one knows you, as every single other post that appears to defend Leland. Not one is real. Get a life, mind your business. Wasn't it you that just asked, who is "we'? I ask the same of you."Hahahahahahahhahahhahahaah! A nobody. You are a troll as well. Get a real name and addy. What are YOU hiding from? You don't even identify yourself, so your posts mean nothing, as did every other one defending Leland and Doug's action.."

and not responded to his posts. Instead you have chosen to continue this flame war to the point of obsession.

"Wrong.Just because I don't roll over and die, you girls escalate it. Bring it on girls, ain't none of you capabe of it alone, you need a group. Whahahahahwhwhwhwhwhwwhwhwhwwhwhwwhwhawawawaaawawawaawaawaawaw!"

Everyone can see that your perspective is now very skewed.

"Not even a good try. The only credibility you ever had in these pages were with Dogie symapthizers. I broke everyone of you (keyclown groupmembers) with merit alone, which is how I reduced your group to the tactics they chose to employ. But somehow you would like to infer that it was somehow MY fault at what they did and the way they behaved because I would not ignore them?? HAHAHAHA! Yea right. This fits you as well as Dougie..we aren't all as stupid as you look'.

Since my name usually gets included with the

"Did I mention you? No. MAtter of fact, no one did. This proves you are a troll. You incriminated yourself., just as Doug did, and Leland."

group you are talking about, you might decide to include me as a defendant in your complaint.
"If you are gulity, so be it. If you are not, blow it out the window, although I am sure I am not the only one who is questioning your motives at this point. Why would ANYONE try to defend what has taken place here, unless the heat is one and they feel it on themselves?"

But since you are clueless as to the scope and application of the RICO act,
your complaint will be met with one of my own for malicious prosecution, and you will not even be able to file Chapter 7 to avoid the damages. So, in your quest for revenge, you better be damn careful where you start pointing your legal finger

"Did I say I had a clue troll? I asked in the form of the question, did I not?
Bring it on anonymous (HAHAHAHAHA) tough guy. I did nothing wrong. So file suit, or shut your piehole, troll."

"Since there are all these pc whizzes on here, let them look at the headers, they will tell you where this came from and whether it came from me or not. What we have here is part of a text from the amateur policy room where someone was good enough to point out to the ROOM, NOT TO LELAND, that I was being forged. One would think that with Leland's (ahem) college background and degree in computers, he could certainly tell if a webtver was being forged or not, would one not?? But no, Leland went out of his way (not unlike Sparky) to WRONGLY (As anyone with half a brain can look at the headers and see) insist I was posting there. Now why would that be, hmmmm? Right! Is his background in computers a lie? Probably. Dig deeper Leland. You'll trip again...you always do.

You ask what Morse Code is good for? I'll tell you. Morse Code is used exclusively by Electronics Based life forms to communicate amongst themselves using advanced Organic Digital Signal Processors, running state of the art Artificial Intelligence Software, to perform the highly complex transmit encryption, receive decryption and error correction functions."

  From: twistedhed@webtv.net (twistedhed)
 Newsgroups: rec.radio.amateur.policy
  Leland C. Scott and another amateur, doug adair, have conspired among each other and have been attempting to start all kinds of trouble in another group for quite some time now. A visit to the cb room will reveal a bit of these folks true nature. Do a back search and see how doug came into the group and how he digressed from there. Leland has just recently stepped up his forging of names of regulars in the other group, targeting me because he does not agree with my political views and, well, to be perfectly honest, he is a bit troubled. Leland has posted under the names "Punisha-of-keyclowns", "keyclown killa", many,, many anonymous names and cotse names, as well as a host of others. He has consistently trolled and posted filthy pornographic items to the cb room and has been forging many regs on there for quite some time, shamelessly letting another licensed fellow amateur take blame.

What's SOOOO funny is that twisty IS COMPLETELY off track here!!!

"Actually, it's dead on. You guys traded off back and forth. Now that I have demontsrated it beyond reasonable doubt in any sane persons mind, what you say means nothing to anyone here. All you have is garbage, forged posts, and the world laughing at you (my words to you remember? Of course you do, you never have any original thoughts or retorts, which is why you forge me, love me, pretend to be me, dress like a woman, practice on your pet, and stain your keyboards in your unwashed clothing and unkempt section eight apartment of yours.You aren't even real.HAHAHAHHAHHA"

I
am a
cber, but I have many ham friends. I do not use foul language, I do not use excessive power, and I do not trespass into ham bands.

HOOOOOT! This is FUNNY!

"When the truth smacks a criminal upset the head, they do one of two things, they laugh nervously, or cry hysterically. I am responible for you doing both.
"
The self-proclaimed

"What? Like you saying it will make it so and take the heat off your chickenhawk tail? HAHAHHAHAHAH. Get a life.....maybe a job so you can get out of that government tax subsidized apartment you live in that is

squalor and rancid by even thirld world countries standards."

>He even made a fool of him self in rec.radio.amateur.misc
>CB sucks get a real license!

Your opinion. You may be surprised but every once in a while you will find an amateur radio operator that got his or her start out on the CB radio. And some still use the CB radio as well. And as soon as I find out when the next licensing test is being given, I'm going to take my test, pass it, get my license and not only talk ham, but CB as well. NEVER FORGET YOUR ROOTS.

>Pretty good bet this, too, is a Leland forgery.

I can tell you it is not mine because the tag line formatting is all wrong. Second one could always call the school to verify that I did indeed graduate from there, twice. If you are too lazy to do the foot work that is not my problem. I don't really care if somebody does check. In fact that is why I put the school's name, and date of graduation, to make it easy. Many Hams have engineering degrees. You may never know where the next juicy job offer is going to come from next. QZR provides some free ad space, so I used it.

http://www.ltu.edu/ltu_home/default.html
http://www.ltu.edu/alumni_friends/default.html

When the party(s) involved with this childish finger pointing finally gets sorted out I will be due a few apologies from one or more people. Whether I get those apologies or not depends if the person(s) involved have the nerve to admit it. Other than that you can now resume your mug slinging, and playing games with forged posts. It does not affect my posting habits one way or another.

TWISTEDHED EXPOSED THE PINK PANTY WEARING COWARDS!!!!

Group: rec.radio.cb Date: Tue, Apr 10, 2001, 7:55pm (EDT+4) From: AntiTwistedhedGroup@yahoo.com (Anti-Twistedhed Group)
Check it out! That poor, terrified, crackpot, defeated bastard is HIDING in re.radio.amateur.policy and posting under the name "fagadair-no-spam@cotse.com"
HAAHAHAHAHAHAHAHAHA!
It must have been a terrible blow for him to realize he was completely WRONG.

"It was. I was WRONG about my trusting nature with Leland. I always give the benefit of the doubt unless given reason otherwise. That is why I have not trusted Leland in months."

We think it pushed him "over the edge".

"We? AHAHHAHAHAAHHAHA! You don't even merit an "I". The only edge around here is the one on the razor that Leland evidently handed back to you after severing a carotid artery."

For everyone's entertainment, let's review the sequence of events:

"Yea, lets."

1. Twistedhed got spoofed unmercifully in rec.radio.cb

Translation: Twisted showed the world what Nocode Douglas Adair began before Christmas, recruited a few "Self-appointed Airwave Police" and freaked when Twisted cut him down at every turn and shot holes in all his warped philosophies. It was too much to take, Twisted embarrassing Doug in front of the world, so Doug resorts to forgeries, libel, false and malicious statements, name calling, accusations, defamations, lies, and a few others I fail to mention here, and carries on as some sort of antihero to a few "anonymous" supporters who were also exposed."

2. Twistedhed decided it was Leland doing the spoofing

"Wrong. Leland cut his own throat. You gave him the razor and he played with it like a toddler would a new rattle, happily and joyfully making noises, jumping up and down every once in a while smacking himself in the forehead with it.""

3. Twistedhed spread his belief all over the net.

"This was actually an attempt at propaganda by you (An anonymous yea..right..hahaha) and Leland, who has a computer degree. He rushed to defend your forged posts of me as genuine. Either he is in cahoots with

you, an idiot, a liar, or all of the above."

4. Unfortunate saps like Richard and Jerry O. believed Twistedhed

"Sure. Sorry chump. Mentally superior folks not of your lowbrow intellect can not be influenced by lies, no matter how well spun they may first appear."

5. The real spoofers admitted

"Nothing. The real spoofers are just as you say..spoofers. Not real."

they

"You mean , YOU, all you now, Dougie. Your pals left you."

- and not Leland

"Leland was not innocent as I have so easily demonstrated. What's funny, is I bet he never thought that you would turn on him like you did."

- had done the spoofing

6. Twistedhed refuses to give up the idea it was all Leland's fault

"More propaganda. Never said it was ALL anybody's fault.there are a few of you that are on the short bus team."

7. Twistedhed ran away from rec.radio.cb and

"As you see, I run from no one, uh, what was your name, doll?"

hid in rec.radio.amateur.policy!

He's afraid to even post under his own name

"Ludicrously and ironically sad."

8. The whole world is now laughing at Twistedhed

"No. Your slip fell below your pantyline and you exposed yourself when I bent you over and kicked your massive girth. Those are roaring sounds of hysterics aimed at your lack of adulthood."

I never did violate that trust. Too bad you feel that way. It does look like
it will take you a long time to figure that one out. Maybe never. I will get
over it.

> It's alright though. I took the
> knife out of my back that same day and recovered..

Maybe you should have it checked for figerprints. So far your detective work
has not been up to par.

> you went too far with
> Dougie and got busted. Do it once, shame on you. Do it twice, shame on
> me. "

So when you can't figure out who the real criminal is you just shoot all the
suspects? I suppose with you running around half primed, pointing fingers at
ghosts, is providing Doug the motivation he needs to keep stomping on your
tail. He must be rolling on the floor right about now, howling with
laughter. So here is some simple advice: The more you "react" to his crap
the more he is going to be motivated to continue doing it. Seems like Doug

made you his pet project, and why you so willingly provide him the motivation to continue beats me.

3801. Re: F/S Radio's & Equipment

Newsgroup: rec.radio.cb
Date: 2001-04-11 16:17:15 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3AD4838B.C9A@bellsouth.net>
Source record: 78298

SSB,

Now this IS funny! These guys are so "et" up with this mess, all they have to do is see the word "AMP", and it drives them coo coo!

Another thing: what they don't see is, that it is perfectly OK to discuss amps, theory of operation, mods, and modes. We still have freedom of speech. We don't have "speech police" in this country--we just have a few who would like to BE speech police. They have so little power over their own existence, they dream of controlling others'. Yes, when you put those discussions into PRACTICE, it *may* become illegal. Now, when I hear a trucker up on 10 meters with an "export" radio a-beepin' and a-squeakin', yes, it pisses me off-BAD. I never said I support illegal activity, but I don't come in here like a raging bull and harangue people about it, either. The "keyclown" guy kinda reminds me of Don Quixote charging around tilting at windmills vainly trying to save the "pure" Dulcinea of legal radio. LOL!

Jerry

Pretty good bet this, too, is a Leland forgery.

I can tell you it is not mine because the tag line formatting is all
wrong.

"That means alot from someone who has been caught in so many lies that
you are able to defend your position on only YOUR word, (or shall we ask
Dogie too?) which at the present, isn't looking to good."

Second one could always call the school to verify that I did indeed
graduate from there,

"If you did really graduate, they are the ones you need to sue. You were
robbed."

twice. If you are too lazy to do the foot work that is not my problem. I
don't really care if somebody does check.

"For someone that doesn't care so much, why stick your nose (not unlike
anonymous sparky) into a situation that was not directed to you and try
to pin something on me you knew to be a lie?"

In fact that is why I put the school's name, and date of graduation, to
make it easy. Many Hams have engineering degrees. You may never know
where the next juicy job offer is going to come from next. QZR provides
some free ad space, so I used it.
http://www.ltu.edu/ltu_home/default.html
http://www.ltu.edu/alumni_friends/default.html
When the party(s) involved with this childish finger pointing finally
gets sorted out I will be due a few apologies from one or more people.

"You are one arrogant person."

Whether I get those apologies or not depends if the person(s) involved
have the nerve to admit it.

"Pot. Kettle. Black."

Other than that you can now resume your mug slinging, and playing games
with forged posts. It does not affect my posting habits one way or
another.

"Pot.kettle. black."

I will not make this post assuming it is on absolute authority. Others
may have better info. But wasn't "Rabbit Ears", a well known CBer jail-
ed last year for unlicensed operation, interference to hams on 2 and
10 meters. I believe this case is still available on the FCC website.
He *may* have been jamming police, as well, but I am not certain.

You have the E-mail on file, and that does include all the routing info you
need to verify the domain. I am not going to post it publicly to add fuel to
the fire so to speak, where I will just find it used in more forged posts.

>
> I kindly supplied you with the URL that explains the whole service.

So they don't like my views, big deal. They stick me in a kill file because
they can't exercise enough self control to resist reading my posts. Oh well,
to each their own.

> "Because I have nothing to say to you."

Fair enough answer.

> "Well, once I retrieve the post and the world can see the date on it
> cooincides EXACTLY with the time my indentations began being forged,
> well, just one more COOINCIDENCE for you to explain.

I think you need to explain it. I don't have a clue to whom else you reveled that little bit of info to besides myself. You did allude to the fact that was how you guys could tell the real posts from the faked ones. So it seems logical to me at least one other person besides myself knew about it.

> By the way, did you
> not make a post and say to Dougie that you WERE an allie, but he
> destroyed that trust, or something to that effect?

Yes I did. Let me explaine that just a bit. Both of us don't like the type of illegal activity we see on 11m. The critical difference being I chose to debate the issues. In Doug's case, well lets say he just went around the bend. Once I saw what he was up to I just chose not to associate myself with him, in any manner. He wants to act like a clown, he can do it on is own.

> Are you going to deny
> you were in cahoots with Dougie? A direct question. Answer it."

Sure.

> "Like playing games with Dougie.

No, but I do go to the gym to work out, play on the radio, check out this news group for the latest round of finger pointing and mug slinging, etc.

Doug made this news group his personal play ground, and it seems your his favorite toy. I can't help you with that problem. Seem like you have to sort it all out yourself. It does appear someone or somebody tried to clue you in, but you just don't care do you? Maybe your having as much fun as Doug.

so have a list of where you two posted my nic and ads all over the net.
Never posted your nic anywhere. I did post Tim's web site URL, but that
was public knowlege to begin with anyway.
Only you didn't figure on that one
backfiring the way it happened to. How about the exchange between us
concerning the forges long ago?? You knew damn well and good I was being
forged and you looked for a way to perfect the forges and I was conned,
I admit. My fault for trusting someone that was in a sheeps clothing
with a bloodthirsty wolf underneath.

I never did violate that trust. Too bad you feel that way.

"Did your partner or you come up with an answer to provide yet on why
you attempted to frame me in a ham forum?

It does look like it will take you a long time to figure that one out.
Maybe never. I will get over it.

"Don't keep yourself up worrying. I sure won't."

It's alright though. I took the
knife out of my back that same day and recovered..
Maybe you should have it checked for figerprints. So far your detective
work has not been up to par.

"Hasn't been all mine. Either you are guilty, or the choice of the
largest damn conspiracy I ever saw, by participants who have nothing to
gain one way or the other."

you went too far with
Dougie and got busted. Do it once, shame on you. Do it twice, shame on
me. "

So when you

"Again, I cannot take all the credit."

can't figure out who the real criminal is you just shoot all the
suspects?

"Nope. Just the one's I catch in the act."

I suppose with you running around half primed, pointing fingers at
ghosts,

"Funny. Same expression used in some of the harassment emails to me made
to look like it was from someone who gave a damn, only THEY were your
ghosts. ANother cooincidence backed only by your word, wait, Oh, I am

truly sorry, you have Doug to support you, and, oh how many other emails that are not real?"

is providing Doug the motivation he needs to keep stomping on your tail.

"Perfect example. You are too easy, Leland. Even beneath it all as you pound furtively on your pad, you can not conceal your obvious anger and displeasure with me in your support of the warped androgynous postings of Dogie."

He must be rolling on the floor right about now, howling with laughter. So here is some simple advice: The more you "react" to his crap the more he is going to be motivated to continue doing it.

"In other words, let it die? Sorry pal. WRONG ANSWER! I tried that. Many others have too. It doesn't work. They also have been driven away. I will not. You girls can not intmidate me."

Seems like Doug made you his pet project, and why you so willingly provide him the motivation to continue beats me.

"Nice spin. See, I DO give credit where it is due.
It comes down to credibility and merit. You are attempting to lay ALL blame at Doug's feet. I can see why, but it simply isn't cool. You are trying to cover lies with more lies. How would Dogie know about your history of a discussion with a certain amateur that you referred to in one of your posts when he let you know I was being forged, huh? He wouldn't. You keep digging deeper, Leland. You are not even a good liar."

Hear hear Jerry, Why you and I have exchanged
a few rounds on some issues, neither you or I
have gone out on a "Holy Crusade".
I too doubt very much that these individuals
turn in anyone local, let alone on the freebands.
I would think that if they ran around playing vigilante,
that not to many of them would even still be talking
about it, after some of the people they accused got
a hold of them.
I have not posted anything in months, because
there really wasn't anything good to post.

Great post Jerry.....

The Landshark

PS. If you do-gooders want, I guess I do everything
illegal you can imagine, repeat imagine.....

3834. Wanted: Raytheon, Apelco, Webster CB equipment

Newsgroup: rec.radio.cb
Date: 2001-04-11 17:10:38 UTC
From: k5dh@raytheon.com
Message-ID: <ie0B6.20$px.111@dfw-service2.ext.raytheon.com>
Source record: 78306
Cross-posted to: rec.radio.cb,rec.radio.swap,rec.radio.amateur.boatanchors

Wanted:
The following vintage CB radio equipment for my personal collection. I prefer equipment that is cosmetically nice and working or repairable.

RAYTHEON:
Tube-type: Raycom, Raycom II, TWR-9
Solid-state: TWR-11, TWR-11T, Raycom III, Raycom IV
Hand-held: TWR-8, MW-2, Regal Ray-Ette, Super Ray-Ette

APELCO:
Tube-type: AR-9, AR-10

WEBSTER BANDSPANNER:
Tube-type: Four-Eleven
Solid-state: 550
Hand-held: WT-2

Visit my Raytheon CB radio web site:
http://www.qsl.net/k5dh/raytheon.html

SSB,

One of the difficulties of getting more bandwidth is that FCC is not the only gov't agency that deals with telecommunications matters. In addition to those you mentioned, there is also the NTIA--National Telecommunications and Information Agency that has even MORE power than FCC. This is the agency that governs *most* of the spectrum you would seek in an effort to expand CB. In spite of the assumptions to the contrary, there are still assignments in the 27.405 to 28.000 MHZ band. Some are "guard" bands, designed to prevent interference, some are military, some are still assigned to forest products, etc. People argue that, well, no one uses these frequencies anymore. Maybe not as much as in the past, but they are still assigned as contingency bands, or as backup. Getting NTIA to give up these assignments would be like pulling teeth because each gov't agency assigned these backups would scream bloody murder.

Now let's consider the whole scheme of things--priorities, if you will. Someone mentioned that on a scale of 1-8, CB, and Amateur, as well, would rank about 38 on the list--plumb off the scale! Realistically, CB would rank 39 in importance, Amateur 38. Too close to call. Truth is, with all the technology--digital, cellphone, ever higher frequencies, etc., CB is sort of an dinosaur--basically stuck right where it was in 1959. To the powers that be, it has become no more than a toy when compared to the other communications tools out there. It no longer fulfills its original purpose--families and businesses having moved to cellphones, computers, email, FRS--things that weren't even envisioned when CB was created. Now, CB is kind of a "shadow" of the Amateur Service--i.e., most people regard it as a hobby, a toy. BUT! The government people, being that CB was never meant to be a hobby, are going to see CB as a non-purposeful service if it is proposed to expand it. The questions would be, for WHAT, What Justification, What purpose does it serve in the 21st century with all the other comm methods we have now? OH, they want to use it as a hobby? B--b-b-but, isn't there already a hobby service, er, uh, isn't it called Amateur or Ham Radio? Can you see where this is going? It is NOT meant to insult or downgrade the CB Service. It is a realistic evaluation of the priorities of the "keepers" of the radio spectrum. It is also why, partly, the petition to remove the 155 mile limit was denied. The FCC, NTIA, etc, see the issue of CB as not important enough. They are looking at military vs CB, government agencies vs CB, police vs CB, aviation vs CB, business vs CB, and so on down the line. Therefore, which groups, realistically, take precedence? OF COURSE! Those agencies and activities that most affect public safety and commerce take priority!

Maybe someday, the desires of CBers will be noticed, especially as tech-
nology advances ever further. Who knows? Meanwhile, we just have to
live with what we have.

From: twistedhed@webtv.net
Message-ID: <12432-3AD492FD-31@storefull-125.iap.bryant.webtv.net>
Source record: 78310

You have the E-mail on file, and that does include all the routing info
you need to verify the domain.

"Why is it only forged when you say it is? Don't think so."

I am not going to post it publicly to add fuel to the fire so to speak,
where I will just find it used in more forged posts.

"Of course you wouldn't want that, would you? Again,I ask you how
"Dogie" knew of your past conversations with a hammie that you went
"round and round" with in the past? If you told him, that exposes you as
his cohort once again, if you deny, well the proof is in the post. If it
was faked, how did he know about it then? Oh, Leland, your lies
are-a-crumblin' down."

    I kindly supplied you with the URL that explains the whole
service.
"Oh man! You are a piece of work.
Thank you!
So what, Leland......I picked you for
WHAT reason? If I was to start trash with someone, there are a few that
that rank ahead of you. Nice try, but no one has come to your aid,
Leleand,
^^^Try to spell my name right.
Not one live person with a real email address. That says it all. Matter
of fact, I have heard from several hammies who have you in the killfile
and know you are trouble from past dialogue with you.

"You evaded that question like you are an old pro at this type
questioning. I am still waiting for someone to validate what you
say....ANY of it!!!!"

You
So they don't like my views, big deal. They stick me in a kill file
because they can't exercise enough self control to resist reading my
posts. Oh well, to each their own.
"Because I have nothing to say to you."
Fair enough answer.
"Well, once I retrieve the post and the world can see the date on it
cooincides EXACTLY with the time my indentations began being forged,
well, just one more COOINCIDENCE for you to explain.
I think you need to explain it. I don't have a clue to whom else

"Not bad, but you had all night to think of it."

you reveled that little bit of info to besides myself. You did allude to
the fact that was how you guys could tell the real posts from the faked

ones. So it seems logical to me at least one other person besides myself knew about it.

"NO. I told YOU that was one way. There were other ways."

By the way, did you
not make a post and say to Dougie that you WERE an allie, but he destroyed that trust, or something to that effect?

Yes I did. Let me explaine that just a bit

"Seems to me like you been doing alot of that lately."

Both of us don't like the type of illegal activity we see on 11m. The critical difference being I chose to debate the issues. In Doug's case, well lets say he just went around the bend. Once I saw what he was up to I just chose not to associate myself with him, in any manner.

"Yep. Dead on. It is exactly as I stated. You were aligned with him in attempting to malign me, among others, all along. Check the date on that post you made. It was only AFTER I told the wrld what you were up to."

He wants to act like a clown, he can do it on is own.
Are you going to deny
you were in cahoots with Dougie? A direct question. Answer it."
Sure

"Thanks. Direct contradictory of what you said above."

"Like playing games with Dougie.
No, but I do go to the gym to work out, play on the radio, check out this news group for the latest round of finger pointing and mug slinging, etc.

"Mudslinging when it hits too close to home, eh?"

Doug made this news group his personal play ground, and it seems your his favorite toy. I can't help you with that problem.

"I need no assistance. He is a fly in the ointment. He means nothing to anyone on Earth except, maybe you and one or two others."

Seem like you have to sort it all out yourself.

"Couldn't do it on my own. I have other obligations.But it's all cleared up now."

It does appear someone or somebody tried to clue you in, but you just don't care do you?

"Just you and Doug, and y'all have no merit."

Maybe your having as much fun as Doug.

"I don't run like you and Doug have BOTH suggested I do (those damn cooincidences). I am here. Get over it."

It seems that he had probation to last one year on a conviction in 1990. I believe that parole time has expired. His indictment was, as stated, on six felony violations of the FCC code. I don't know what those violations were, but FCC code has no provisions for probation violation.

>I can't seem to find any further in depth information on the web about this case.

This is the text I found copied on several different sites:

==========
From the ARRL...

Former amateur Richard Allen Burton this week was sentenced to three months in jail and one year's probation for unlicensed operation of a radio transmitter. Burton also must undergo psychological treatment.

Burton was sentenced January 22. The FCC says he'd been operating without a license on repeaters in Southern California. Burton is scheduled to report to the US Marshal's office on February 26 to begin serving his jail term. He has been free on $20,000 bond.
Formerly WB6JAC, Burton, lost his General ticket in 1981 as a result of unspecified violations. Since then, he's racked up a lengthy history of alleged unlicensed operation, most or all of it on amateur frequencies. He has served jail time and probation as a result of earlier convictions.

Burton was arrested last August 5 following his indictment by a federal grand jury in California. He faced six felony counts of violating the Communications Act of 1934.
==========

If you write to Riley, he will probably tell you where you can find specifics.

Hello AntiKeyClownWatch:

> What "radio"? A "CB" radio?

No it was a ten meter radio, but it has been converted to 11 meters.

>More "power"?

Yes, a lot more power, it doubled, a 3 dB increase.

>Why do you need "more power"?

Why do race car drivers what to go faster, why do city girls learn early how to open doors with just a smile, why do the welfare lines get thinned out a little after someone yells that a Cutter Sark Scotch truck has just turned over a block away, why is it that you slow down when a police man is behind you, why is it you whistle at a pretty girl, why is it you still drive with a open beer, why is it that you disconnect the smog equipment on your new truck, why is it you add another pair of 3-500Z's to your SB-220, why is it that on a 1964 Buick the engine mounting bolts are 7/16 and there are 1/2 on the 63's and 65's, why is it when it rains that the roof only leaks over the bed, why is it ya only want to pass gas in a elevator with attorneys from the Seria Club, why is it that Miss Dinah sold the fillin staion (just down the road ah ways) to Miss Sandee, why is it always dark until the sun comes up.

Also this will kick the linear amplifier ah lot harder.

From http://www.tapr.org/newsline/newsline00.html .....

Enforcement: Ex-WB6JAC Accepts Plea Bargain That Includes Jail

From http://www2.arrl.org/arrlletter/00/0818/

A California man with a long history of alleged unlicensed operation has been arrested . The FCC
reports that Richard Allen Burton
was taken into custody August 5. The action follows Burton's indictment in May by a grand jury for
the US District Court for the
Central District of California. Burton, a former amateur licensee, has been charged with six
felony counts of violating the
Communications Act of 1934.

The FCC says Burton was operating without a license on Amateur Radio repeaters in Southern California after his license was
revoked. Formerly WB6JAC, Burton's General ticket was lifted in 1981. He was convicted in 1982 on
four counts of transmitting
without a license and two counts of transmitting "obscene, indecent or profane words, language or
meaning." Burton initially was
sentenced to serve six months of an eight year prison term, with the remainder suspended. Upon
appeal, the US Ninth District Court of Appeals upheld the unlicensed operation conviction but
threw out his obscenity conviction. The FCC says that Burton transmitted without a license while
on probation in 1984 and again in 1990. After the second incident, he was fined $2000 and received
a year's probation.

In 1992, Burton attempted to get his Amateur Radio license back, but the FCC refused to reinstate
him. He was briefly successful in getting a ham ticket in 1996, when he passed a Technician exam
at a VE session. The FCC granted Burton a new license and the call sign KF6GKS, which was promptly
set aside as soon as the Commission realized its error.

The FCC said that bail for Burton was set at $20,000. He's out on bond. Burton pleaded not guilty
at his arraignment, and a trial has

been set for October 3.

So it seems he was jailed for parole violation, and not directly for violations of FCC Rules. That
his violations of FCC rules was the vehicle for his parole violation has bearing only in that
breaking the rules yet again is what violated his parole.

I can't seem to find any further in depth information on the web about this case.

-SSB

They are both at fault. Leland was a good foot soldier until some folks on here who tired of his garbage found him out. Below is an exerpt from his resignation letter, posted an entire day after disinfecting their kennel and blowing Leland's cover. It was only posted AFTER he was exposed and this was an immediate way to attempt to save face, only you can't even do that right, can you Leland?

Once I saw what he was up to
  I just chose not to associate myself with him, in

"Just when was that again? OH, that's right. The day after exposing you. HAHAHAH! We all know about Dogie, but you Leland, as a licensed amateur, should have known way better than to even align yourself with someone of his disturbed caliber in the first place. Keep the lies coming. So you approved of ALL his spoofing and porn garbage up until only until last week, eh? Many of us already knew what you were like Leland, so it comes as no surprise you heartily endorsed Dogie until getting caught yourself. YOUR words LEE, your words......BWAHAHAHAHH>>>Keep 'em coming, Leland, keep them coming! YOU, should follow the advice you like to give so well, in drag with your buddy as well as in this current persona, and vanish with your clipped tail into the night. Isn't that what you said you would do (Not, unlike (sigh) of course, Sparky) anyway?"

Run little Leland, RUN, RUN with your bloodied nose, self respect, esteem and credibility completely shot to hell by an illiterate webtver, run to the BIG blob of disgusting matter that can barely pass a bakery or deli without getting excited, RUN to the terrible, wicked poster of porn, quickly now, have him post more BS while you concoct a lie that may actually seem plausible to even the remotest of intellects."

Thanks, Sparky...

Like I said before... If I'm incorrect about being jailed for FCC rules violations, I'll readily admit
it....

I still don't think I'm incorrect in saying that the FCC rules are just that... rules. The FCA (Federal
Communications Act) was passed as an act, and not a law, or group of laws. Can people be fined for
violations of that act? Yes, without question. But I have yet to hear of a case where someone was
jailed solely for violations of that act.

If I remember right didn't Phil Kane say, in the policy news group, that he had to send away for the list of enforcement actions. So if that is the case then may not everything gets published on the net.

Hi all
First of all I have been an outlaw opp. for years. I use to run a Yeasu FT-101 and an Antron 99. Before that a Kenwood TS-520 and so on. A few years ago I took a tour of the Industry Canada Office in Surrey BC, Canada,(a suburb of Vancouver BC). I got to see and play with the computer tracking system they have. 6 seconds to track any transmitter in the Lower Main Land and it is so good that it will print the exact address of the transmitter, (accurate to a few feet). I do believe that they also have a form of the transmitter fingerprint to follow a specific transmitter even when it was not being misused. The amount of hi-teck equipment there made me envois. There coverage is from 25 Mhz to 900 Mhz. That is all it takes is one complaint and they will start monitoring that frequency. I did not know that they could track you so fast that one key click or one word could give out your exact location to with in a few feet. I also got to see the monitoring equipment that they can set up in your neighborhood on any pole and connect back to there office. I do know that the FCC in the US uses more advanced equipment then Industry Canada does. So just one complaint and you could find yourself in hot water with the Government.

What would make you happy ? Would you like me to apologize to everyone who has to use things like "illegal faggot", "twistiefag", "1mangayboy" to draw attention to their constant profane abuse ? Don't forget to chide Kevin Muenzler for posting a new thread and stereotyping us all as members of "Children's Band".(i didnt bother because i knew who he was refering to). I could have, and can be, a MUCH bigger a-hole than i am now. I didnt make a new thread bashing the few losers out here for a reason.
As for being intolerant of others; i gotta say, you missed on that one. Out of the many, many people i get to know in life, none of them are angry vigilantes who dedicate their existence to polluting other folks social interests. Maybe you really dont understand that i dont understand how people can do that. I am hardly dictating my lifestyles to others, im not a model by any means.
Honestly Sparky, i apologize if what i say burns yer biscuits. My interests are aimed at a very narrow band. I'm sorry that it bangs yer needles, im not posting this stuff wondering how i can piss you off.

Whatsamatter Dogie? Twisted having that stuttering effect on you again? Can't have him focused on Lelands lies now can we? Lets just post tons of times to try and change the issue.....not likely, I want to know why Leland has lied and has no answers for his posts about me in a ham forum..and his lies... HAHAHHAHAHAHAHAH! C'mon girlies! Try some more. Leland is dirty, and he his lies exposed imself, as Isaid they would. All your alter egos can't change that!!!!

Group: rec.radio.cb Date: Wed, Apr 11, 2001, 8:42pm From:
punisha-no-spam@cotse.com (Punisher Of KeyClowns)
Well Twistiefag, the newsgroup is turning against you.
"No one but you and your aliases, or one that has no valid emails. Begon
chick, er Dogie! BWAHAHHAHA!

Read it and weep.

"No YOU rewad it and weep like you been cwyng all day chicken ha, er
Dogie!"

Your old hardcore illegal pal BadaBing

"I do not know any badabing, mayo head."
thinks you're a yutz.

"I haven't cared much what pothers thought it over 42 ears, er years,
inbred! BWAHAHAHHA!"

Because you are....

.in contro of my dogie, yea, I know, thanks
.
You've been fooled, tripped up, sliced, diced and bamboozled seven ways
to Sunday.

"The only thing I have done is crash your queer party and posting.
HAHAH"

And the astonishing thing is that you didn't even know it

Again, pot.kettle.black, only you are too stupid to know it."
You were gently told agai

"HA! By you and Leeland girlies, Go iron your dresses..BWAHAHAH Yer just
issed 'cause I killed your sorry game and Lelands too."

"
n and again to chill out, but no, you had to go Postal
"Whatever you think means squat here chump."

No one cares how much you've suffered or if you were freaked out when
you got that jockstrap in the mail. The main thing is this NG wants you
gone.

"Again, onlymyou chunky chickenh, er Dogie, only you and Leland have a
problem. What did Leland say tomight, about thiose that can't handle
seeing the truth? HAHAHAH! Pot.kettle.black, tubs!"

Take a poll.
"We did. "Unanimously, you and Leland are guilty. Were you two not banned from the other group? Guess what? Most that make up this one are there,bozo. Are you? Not one came to your aid. NOT ONE! How does that make you two feel?"

Ask the NG if they want you gone. You can't, can you?

" ALready answered. You were booted out along with Leland. They want YOU gone. They want the forgers gone. They want the trashmouth gone. But you already know this. The contingency is overwhelmed in agreement. How does it feel to have absolutely no one come to either of your aid? Doesn't matter WHO is doing the forging, you both are guilty as hell and no amount of fluff you post can take away from Lelands sleazy dealings and outright lies."

You KNOW what the answer will be.

"I sure do. So get over it. I'm here, and YOU, my chumpy friend, were already voted out yourself."

-Punisher Of Twistedhed-

HAHAHAHAHAHHA! Your street level name singing is punishing me? BWAHAHAHAH! HAte to see what you could do when you really get mad and ball up that pudgy fist of yours!"

.is directly in proportion with how bad twisted whips him. The more he posts, the more he is hurt.
This is all too take attention away from the questions Leland does not want to answer, such as why a computer majored college grad like he can not tell the difference between a forged post and a real one. Why he would INTENTIONALLY try to frame me in a ham forum (just like Dogie, and we have STILL, YES ladies and gentleman, YET ANOOOOOOOOTHER COINCIDENCE!!!!!!!) Maybe we need to see it again, hmm? Or why Leland can not explain his resignation letter to Dogie? Why LEland? Why did you do these things? You have NO answer Leland. Why is that Leland> it will not rest, no matter what Dogie posts or how many times. I, as well as other hammies, want to know why you told a hammie a forge by me was real in a ham forum and then lie about it? You did lie about it Leland, do I need to point that out again Leland? Do you need shown the post you made? How about the one where you accuse Dogie of going to far showing you had an allegiance with him until I exposed you and you started tripping over your own lies??Just so happens that the post coincicides with everything else, hahahahhaha! Now where was it?"

Jr, I stand corrected. The fundamental is the first harmonic (although it's generally referred to as the fundamental). The second harmonic is two times the frequency of the fundamental, the third harmonics is three times the fundamental.

I probably dont need to get this simple, but, i also have an e-mail address. I received two replies by e-mail also concerned that i was pointing them out. I explained to them the same thing i explained to you twice. I also received confirmation that the parties just mentioned were completely clear on this matter. So here we go... If you post dozens of times a day, using the word faggot, and other obscenties, then yes i am calling you trailer trash.
You are the only one responding constantly to my post in this newsgroup, and it seems like you are almost paranoid that i was pointing you out after reading this last response. I either have an affinity for stepping on your toes, or you are seeking an argument where none belongs. I will no longer respond to any more postings on this matter, as i suspect that the latter is true. Good day.....

3912. newbie question

Newsgroup: rec.radio.cb

Source record: 78286

hi.

i am an admitted newbie, pls dont flame me i will try not to be too
ingorant, thanks

i just bought a d104 atop a tug8 stand off ebay. i wanted to connect
this to my
148gtl (also an ebay purchase), but it only had a 4 pin plug and not the
5 pin
plug that the 148 takes. so i bought a 5 pin plug, and i wired the d104
the same
as my 565-m6 that i had from a previous 148gtl, except there is no
"blue" wire in
the d104, as the cord only has 3 wires + shield

well, i hooked up the d104 to my 148gtl and it tx's and rx's fine,
but my question is am i frying my radio by not having the "blue" wire
hooked up???

hopefully this is not off-topic, if you know of another forum (news
group or web page)
that i can go to pls let me know. i am also interested in building my
own base station
antennas, if you know of a source for that i would be grateful. yahoo
and lycos searches
are not generating very good sources.

thanks in advance

kev.

Children interested in radio at an early age. Show them that radio
operators act like this and turn them away from radio? Blow any interest
they had. Sounds like wholesome encouragement now doesn't it.

Then Doug, as the self-proclaimed leader, should remind his troops
that there is no battle, that most of the best posters on the
newsgroup have left (legal or not), and that his influence has not
improved this ng in the least but made it ten times worse. Good job,
Doug. Now go away, get some therapy, and don't be suprised when people
that don't like you, most of which you don't even know yet, remember
your name for a very long time.

Wonderful idea. I just put a couple circuits on my site that might be
of interest to CBers (I'm not selling anything). I put them up because
so many people rely too much on the SWR meter. These are easy circuits
that almost anyone can build for next to nothing, and are many times
more useful than any SWR meter, even if just for occasional use.
Comments welcome.

These circuits wouldn't entail modifying the internals of a radio, would they?
::grin::

I found the article on the vertical coaxial dipole quite interesting... I have mine set up a bit differently on the car, and mine is 1.25 wave, but they'll both work...

Interesting that someone with such opposite viewpoints on certain subjects seems to agree with me 100% on other subjects, whether they know it or not....

Kevin, the TUG8 stand has only four wires. If the mike is working properly, then all is fine. The later stands, TUP8-9, have six wires. They have an added blue and yellow wire. In most cases with these stands, only four of the six are used, sometimes five. The "extra" wires were added when the electronic vs. relay keying switch was omitted. The same system was used on your 575m6.

Hope this helps.

Hello Tim: Yeah as I hear it Miss Dinah got hooked up with some pilot guy, and decided that it was time to move on.

But Miss Sandee is real pretty, and the best thing is, gas prices at the fillin station has dropped 10 cents a gallon. And when you buy two cases of Beer ya get 20% off. Miss Sandee also got Squaw Women (channel 12 AM) to make Beef Jerky in mass quantities, and I have had a few bites,.... TILT-OH-Matic does this bring tears to your eye's, and make ya think the roof of your month is caving in, this is some great stuff.

I have been wanting to go over and introduce myself to Miss Sandee and tell her I am available and ask her out, but some movie studio has been making a movie there the last few days, and theres been a million people there the last few days.

But I'll go over there ask her out in a few days. Wonder if I can get a discount on Beer, VO, and Ammo?????

Not that much. They do write some interesting articles from time to time.

> and the technical articles are low level.

Not to say the ones in QST are any better. The best ARRL publication for
tech articles is QEX.

>as far as qst your right not too many cb'ers belong to the arrl.

Probably, however they do sell copies of both magazines at the larger
bookstores. I got a few copies of CQ-VHF before signing on for a regular
subscription. Then shortly after that they rolled CQ-VHF in to CQ, then
discontinued publishing CQ-VHF. Some people were not happy about that.

Hey Buddy,
They also have ISP's, and what several do breaks all the usual rules one sees in most Terms of Service. Why should I believe they wouldn't break rules in any other type of service? Hypocrits know no boundaries, right? What's really interesting to me is how the "No Coders" seem to be the major contributors of the filth that has gotten spewed. Notice the other Hams wont touch them with a 10ft pole and will, rarely, acknowledge their existance. Probably something in that, as has been stated many times before. If Twisted would just ignore them and stick them in the killfile, I have to believe they will eventually go away.
Whatever, thanks for the response and you have that Buell-tiful day.
Roger?

Hello Randy: Good posting here.

I have run into the TUG8 a few times, wanting to use it on a radio that needs more than the common one wire grounded switching sceme for the PTT function. I have installed a small relay avaiable from Radio Shack, that now allows the single pole double throw internal PTT switch to control a relay that has two or four poles, that can switch some of the radios that need a bunch or contacts made and broke for the PTT function.

The relay can be added inside the radio, this will allow the stock Mic wire that comes with the TUG-8 to operate the new relay inside the radio, now doing the PTT and Receiving switch function.

I have a old Johnson 40 channel CB Radio that had a bunch of wires for the PTT switch function, I think the mic cord connector, had 8 wires used for the PTT switch function. But I installed a new relay inside the radio, and removed the 8 (or more wire mic connector) and installed a normal 4 wire mic connector so that a normal mic could work on the radio.

Message-ID: <NIjB6.1012$984.355115@news.pacbell.net>
Source record: 78409

Hello & Good Morning Jeff,
While what you are saying maybe true, they
also claim to be "Legal CB'rs". Ham or not
they still have to follow Part 95 Regs. So my
point is that you certainly don't think they act
this way on the CB Bands too? I mean that
would be one Hell of contradiction of philosophies.

The Landshark

Good morning rat. Al you can do is attempt to obfuscate insted of answering. I will post the evidence again so you are certain what is going on, since you avoided every single pertinent question yesterday.. Isn't that another coincidence? All you can do is hem, hhee, and haw, it matters not who I post to, but you avoid giving an answer, Leland, and refusal to answer and dodge them like you do only seals your guilt. By the way, has anyone with a REAL email addy come to your defense, yet?. Wow! Big surprise there, eh? I will remind you leland, Do not worry. I will not stop badgering you until you answer why you tried to frame me in a ham forum even after being pointed out by other amateurs that you were mistaken. What did I ever do to or say to you that could make a licensed amateur, such as yourself, and COMPUTER DEGREE HOLDER NO LESS, want to frame and start trouble with a cber? Now why would that be? You have lots more explaining to do, or maybe I SHOULD go to the hammie room and post everything I have on you, like a good amateur suggested. In his own words,"You can't start something when you are giving it back." For whatever reason you chose to target me Leland, I will not go away. You will just have to deal with it. See, it's like a public park bench, Lee, you don't like what I am saying, so you resort to childish games (like the coincidental counterfeit post showing up JUST when you needed it to make a point, AND in the same thread! WOW! : YES lady's and gentleman ,LELAND is STILL countereiting.), but is indeed a big park, and I just kicked my feet up. You don't like it..that brings me a smile..you always have the option of walking away. Now let's begin our lunch, shall we? Enjoy, and have a great day.

post?"
I don't have a web page Twisted.

Straight from QRZ.com's webpage. Let's all have a laugh again, at
Leland's expense because: A) His little game with Dogie backfired B) he
has been caught how many times in a row at every sleazy attempt to lie
and cover his dirty tracks, including the "forgery of himself" right
when he needed it most, while he was busy taking his foot out of his
mouth for YET another lie, huh, Lee? I still want to know about the
resignation letter to Dogie. I want you to specify what posts you allude
were DOgie getting you into this hot fecal fun you love to frolic
in.....just so I can make the fool again, or maybe I will just let you
do it. But wait, Lee hasn't answered ANY questions poised to him? Why?
Because he was shooting himself in the foot every single time he opened
his mouth, ain't that right, Lee? Enjoy.

Email: KC8LDO@arrl.net
Bachelor of Science Electrical Engineering (1978)

---
20 years experience in power electronics servicing and designing
induction heating power supplies. Frequencies range from 1KHz to 450KHz
with power levels from 2.5KW to 1200KW. Inverter designs based on SCR,
IGBT and MOSFET power modules.
****
Bachelor of Science in Mathematics and Computer Science (2000)
Lawrence Technological University Southfield Michigan

I plan on signing up for the Master Degree program in Computer Science
with a focus on software engineering. I got

"Still ain't fixed that yet, hmm? OK, when noone is looking, you wun up
and fix it weel weel quick and we will pwetend in never happened, OK?"

a degree in computer science just for the fun of doing it. I like
playing with computers as a hobby so I figured if I want to learn

anything, mite

"This is an absolute jewel of a thing here..apparently our college grad has a mail order degree. You have to excuse him. He doesn't hear so well..ahem...Lee, uh, Lee,....a mite, Mr. Lee, is a parasitic arachnid, it would be best placed immediately following your call."

as well to it right, and got a degree.

"...to it right and GOT a degree. Got it?"
****
I have found that ham radio is an interesting and fun hobby. Since my professional background is in power electronics, I have found that ham radio has provided me with a means to expand my knowledge in the area of communication electronics. Its interesting to note that most of the new technical advances being made in Ham Radio occur on VHF and above. As an engineer

"You mean as in the MOnkey and the engineer? OIC!"

that is what attracts me to the hobby.

"Na, I think it is the trolling you do on the air."

From where I stand I see

"You may see, but you are blind."

systems that were completely designed in hardware now redesigned as part hardware and part software, which performs better and costs less

"Singular useage here, Mr. college grad. Did you even proof read this?"

to manufacture. I think the time is approaching where it will be difficult

"......to find anyone on the ng, here or the ham room, to trust me for anything. Especially since I maintain my inocence but offer nothing but evasiveness when asked simple questions that I don't like or have an answer for."

"Your words do have a special ring, eh? They always bite you in the ass."

to separate the hardware from the software functions in future communications equipment. Everywhere you look, commercial systems are going digital while many Amateurs are still arguing about the merits of Morse Code testing.

"Your obsession with Morse is what caught you. I LOVE Morse!"

So partsboy, is being called an illegal faggot that bothersome...awwwww poor widdle partsboy....

Go make love to your gay girlfriend twistie, ya whinebaby.

twistedhed is a pussy, is deluded in that he thinks anyone cares if he "outs"them, and shows his faggotry by being serious about it in the first place. Also,I heard in this NG he is a sex offender.

For sale:
A box of hand microphones, including 14 regular hand mics,
two "power mics" (one Turner M+2, one Mura DX-116), one
Radio Shack "telephone" style handset with PTT, and two
small tape recorder mics. Some of these have connectors,
some don't. They are untested and sold as-is. Most of
them are in good, usable condition. A few are probably
best used for parts. Price is a mere $25.00 for the box,
and that price INCLUDES shipping!

73,
Dean, K5DH

Your getting close to losing your marbles Twisted. None of your CB buddies have rushed to your rescue. I can't say I blame them. They did try to point out where you are screwing up, but you just blew them off too. I will just keep tuning in to watch while you slowly continue with your own self destruction. It seems that's the only thing your doing well at the moment, and I don't mine watching either. After all the name calling, and crap you pulled, in the name of getting even for imaginary wrongs done to you myself, I feel I should have a front row seat to see you continuing to make fool of yourself. So far you haven't disappointed me. I hope you don't quit too soon because I'm beginning to enjoy this show your putting on. 8-))

27.375 MHz... isn't that CB channel 37? The transmissions may be clandestine in nature (spies?), or they may be from a ham who's just jackin' around with the CBers (it happens).

Similar repetitive CW transmissions occur at the low end of 15 meters. They are repeating groups of numbers, definitely of a clandestine nature, and they've been going on since at least the mid-1970s that I know of.

What part of the country are you in, and at what times are you hearing the transmissions? I'll give a listen and see if I can hear them. If I do hear them, I'll decode them for you (I work almost entirely CW, so it's like a second language to me).

I don't have a web page Twisted.

Straight from QRZ.com's webpage. Let's all have a laugh again, at Leland's expense because: A) His little game with Dogie backfired B) he has been caught how many times in a row at every sleazy attempt to lie and cover his dirty tracks, including the "forgery of himself" right when he needed it most, while he was busy taking his foot out of his mouth for YET another lie, huh, Lee? I still want to know about the resignation letter to Dogie. I want you to specify what posts you allude were DOgie getting you into this hot fecal fun you love to frolic in.....just so I can make the fool again, or maybe I will just let you do it. But wait, Lee hasn't answered ANY questions poised to him? Why? Because he was shooting himself in the foot every single time he opened his mouth, ain't that right, Lee? Enjoy.

Email: KC8LDO@arrl.net
Bachelor of Science Electrical Engineering (1978)
Lawrence Technological University Southfield Michigan

20 years experience in power electronics servicing and designing induction heating power supplies. Frequencies range from 1KHz to 450KHz with power levels from 2.5KW to 1200KW. Inverter designs based on SCR, IGBT and MOSFET power modules.
****
Bachelor of Science in Mathematics and Computer Science (2000)
Lawrence Technological University Southfield Michigan

I plan on signing up for the Master Degree program in Computer Science

with a focus on software engineering. I got

"Still ain't fixed that yet, hmm? OK, when noone is looking, you wun up and fix it weel weel quick and we will pwetend in never happened, OK?"

a degree in computer science just for the fun of doing it. I like playing with computers as a hobby so I figured if I want to learn anything, mite

"This is an absolute jewel of a thing here..apparently our college grad has a mail order degree. You have to excuse him. He doesn't hear so well..ahem...Lee, uh, Lee,....a mite, Mr. Lee, is a parasitic arachnid, it would be best placed immediately following your call."

as well to it right, and got a degree.

"...to it right and GOT a degree. Got it?"
****
I have found that ham radio is an interesting and fun hobby. Since my professional background is in power electronics, I have found that ham radio has provided me with a means to expand my knowledge in the area of communication electronics. Its interesting to note that most of the new technical advances being made in Ham Radio occur on VHF and above. As an engineer

"You mean as in the MOnkey and the engineer? OIC!"

that is what attracts me to the hobby.

"Na, I think it is the trolling you do on the air."

From where I stand I see

"You may see, but you are blind."

systems that were completely designed in hardware now redesigned as part hardware and part software, which performs better and costs less

"Singular useage here, Mr. college grad. Did you even proof read this?"

to manufacture. I think the time is approaching where it will be difficult

"......to find anyone on the ng, here or the ham room, to trust me for anything. Especially since I maintain my inocence but offer nothing but evasiveness when asked simple questions that I don't like or have an answer for."

"Your words do have a special ring, eh? They always bite you in the ass."

to separate the hardware from the software functions in future communications equipment. Everywhere you look, commercial systems are going digital while many Amateurs are still arguing about the merits of Morse Code testing.

"Your obsession with Morse is what caught you. I LOVE Morse!"

Add/Update biography for KC8LDO
A fanatic is one who can't change his mind and won't change the subject.

Glenn and his wife were working in their garden one day when Glenn looks over at his wife and says, "Your butt is getting really big. I bet your butt
is
bigger than the barbecue."

With that he proceeded to get a measuring tape and measured the grill and then went over to where his wife was working and measured his wife's bottom.

"Yes, I was right, your butt is two inches wider than the barbecue!!!"

The wife chose to ignore the husband.

Later that night in bed Glenn was feeling a little frisky. He makes some advances towards his wife who completely brushes him off. "What's wrong?" he asks.

She answers, "Do you really think I'm going to fire up this big-ass grill for one little weenie?"

Twist(edhed)in' The Night Away*

Let me tell you 'bout a place
Somewhere up-a Florida way
Where the CBers are so gay
Twistin' the night away-ay
Here they have a lot of fun
Livin like cowards on the run
Man, you find the old and young
Twistin' the night away
They're twistin', twistin', everybody's feelin' gay
Twistin', twistin', twistin' the night away
Here's a man in a gayboy clothes
How he got here, I don't know, but
Man, you oughta see him go
Twistin' the night away-ay
He's french kissin' with the dude in slacks
Tim Nebo''s hands a-movin' up his crack
Oh man, there ain't nothin' like
Twistin' the night away
Twistin', twistin', everybody's feelin' gay
They're twistin', twistin', twistin' the night away
Let's twistedhed a while!
Lean up, lean back
Lean up, lean back
John Gyer, now fly, now twist
They're twistin' the night away
Here's a CBer in bluejeans
Dancin' with a older drag Queen
It's Twistie dolled up in-a diamond rings and
Twistin' the night away-ay
Man, you oughta see him/her go
Twistin' to the rock and roll
Here you find the young and old
Twistin' the night away
They're twistin', twistin', everybody's feelin' gay
They're twistin', twistin', they're twistin' the night away
One more time!
Twistin', twistin', everybody's feelin' gay
Twistin', twistin', they're twistin' the night away

Hi Larry,

There is some A-Hole, who uses the screen name "Twistedhed", and another A-Hole pirate CB operator by the name of Tim Nepo. Somebody(s) have been enjoying stomping on both their tails whenever they get a chance about running amplifiers, out of band signals, etc. What you see below got posted today. Here is a little sample of the current entertainment to be found on the CB radio news group. Enjoy.

Lee
KC8LDO

"This is the type thing that this licensed Amateur gets his jollies from and enkoys posting to a ng, that and pornography. Sad, isn't it? To further see what type amateur Leland Scott is, one needs only to go to QRZ.com and punch in his call, KC8LDO to see him bragging of being a computer genius (One who couldn't tell when a webtv user was being forged, even though he was told by separate people on separate occasions that he was in error, but INSISTED they were wrong, what does that say about his computer literacy?) and engineer that can't spell fifth grade words on a profile page that he actually said he uses to "advertise". My God, Leland, who do you think would hire you after misspelling the word, "might". Even if you misspelled it, you did not check your work before posting it..which clearly demonstrates laziness, inability to complete a project on time, ineptness, poor grammar and English skills, and a general noncaring, boorish, sloppy, job, which is exactly what tripped you and exposed you as the lying cheat and forger that you are. WE all know you kicked yourelf for shooting yourself so many times, but you can't say you didn't deserve it. I mean, we all slip on the keys here and there and misplace a letter or two, but to use your birthsign as a word meant to demonstrate "Strength". Come again girls.

3984. Steve, Spectrum 1600 advice:

Newsgroup: rec.radio.cb
Date: 2001-04-13 00:25:51 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3AD6478F.AFE88D71@qnet.com>
Source record: 78517

Hello Steve: Not the Spectrum 1600, the Sigma 2 or 5/8.

The Spectrum 1600 will bend or even break just a few inches from the bottom of the vertical element, it uses foreign made aluminum tubing, that is not as strong or as hardened as the American Made stuff, 6063 T8 or 6061 T6. The cost for this foreign made tubing is almost 1/5 th the cost, of the good stuff.

You can internally reinforce the Spectrum 1600, but now the time and materials invested, your back to doing it cheaper with the good materials to start with. And the performance of the Spectrum 1600 will have some loss in the impedance matching device. And its performance will be close to a I-Max 2000 I would think.

The Sigma 2 will work better if you can find one. The MaCo V5/8 is a almost close copy of the Sigm 2 5/8 WL Antenna. But it is closer to a half wavelength antenna, as compared to the Sigma 2. They both have the vertical element mounted into a insulator, that is mounted inside the base assembly, which is grounded, that has internal unwanted stray capacitance, that will add up to a few dB in lost field strength.

Jay in the Mojave

You ask w

HAHAHHAHAHAHAHAHAHAHAHAHAHAHAHAHAHHAHAHAAHHAHAA! LOOK at the post.
Lelands sig is at the bottom. The impotent clown forgot to remove his
sig about, "You ask what Morse code...." ahahahahahhahhaha
Leave now Leland! You are a disgrace. Defeated by the one I told you
would be responsible for your demise....your own hand. Disgraceful
amateur. You should be shunned.

Please explain the above Leland. Was it Dogie trying to pin the blame
on you? Why are your funny little marks on both posts? What jollies do
you and your sorry little parade of porn posters and butt biters derive
from forging all those ads to me? Same idiot spelling. Figures someone
like you would not know how to spell "Zeppelin", as in "Led." For
someone that doesn't care about being exposed, your girlfriend sure has

thrown a temper and hurled obscenities at me for saying it. I say it once and your girlfriend has to post 40 times in respoonse? Well shoot, sweeties, y'all don't post like that unless I hit a nerve. So post up girlies. Oh yea, why is your little ditty ode to Morse chopped off? Huh? Both As long as you play games, this will not go away. But then again, it doesn't have to. Leland C.Scott licensed amateur KC8LDO, can not explain how his sig came to be seen on these posts. But the anonymous folks can swear to his innocence..bwaahahahahahaha. Simple, Leland is a liar and a coward,and he was in great company with dogie. He is like a fish out of water, a deer caught in the headlights that can do nothing but look to his anonymous porn poster for assistance. Leland, you are pathetic. By the way, why do you keep replying to me, you said what I think doesn't matter, so instead of attempting to lie more and rationalize your actions and already condemned tail, ignore me like you said you would. Kapish? (with proper nod to "badabing") HAHA!

: So just why is 1.5:1 so different for a tube rig than it is for a
: solid-state source?

I disagree with Sparky quite often on this newsgroup, but he is absolutely
correct here. A 1.5:1 SWR is completely acceptable, even for a transistor
rig. The only time it wouldn't be was if someone was running a "competition"
rig where it is already being badly overdriven. There, the small amount of
extra heating from a low SWR could be enough to destroy the finals.

3997. Legitimate question: Engine noise

Newsgroup: rec.radio.cb
Date: 2001-04-13 03:47:46 UTC
From: "fgn1596@world.net" <skimickey@bewellnet.com>
Message-ID: <9b5t1lrp1@news.bewellnet.com>
Source record: 78519

Dear NG:

I have posted in the past seeking help with installations, and am once again at my wits end. BOTH my radios in BOTH my cars have a huge amount of engine noise that comes through the antenna (not power lead, I tested). Both are good radios (Uniden Grant and Superstar 3900) with Wilson antennas. The noise does rev up with the engine, but is so loud that the noise blanker is useless on sideband. Switching the NB on/off in sideband has no effect whatsoever. I have consulted numerous websites and information, and tried all sorts of fixes (grounding evrything, new plug wires, caps, etc.) to no avail.

My question is this: can the ignition COIL cause this type of noise? Both vehicles have aftermarket (hotter) coils in the interest of increased performance. My Tahoe has a Jacobs ignition unit. I called Jacobs and they were no help at all, just saying "yep, they sure do put noise into your CB, too bad." If I bypass the new coil, which is huge, and revert to the stock unit, no noise! Absolute silence! Is it too much to ask to want performance AND a radio? My other car's coil is an Accel superstock. When I reinstalled the stock coil, the noise was definitely lessened, though not completely gone like the Tahoe. Based on the suggestion of some others, I tried running caps from the leads of the coils to ground. Is it obvious to state that the car won't start when the + lead is shorted to ground? Anyway, I believe the problem is the coils, as I've eliminated about everything else, so if anyone has any tips, please help. Thanks in advance.

Mickey

Source record: 78522

Mickey,
Capacitors are an 'open' circuit for DC, so it wouldn't
be a short to ground. If you do by-pass the coil(s), you
want a capacitor that has a voltage rating at ~least~ twice
what ever the highest voltage your ignition system uses (it's
gonna be quite high!).
Good luck....
'Doc

Message-ID: <fpiddtc7r6mp53va2uaedmr9is5t22ff7a@4ax.com>
Source record: 78527

Greetings!

The noise could be radiating from two sources...

Power wires from the coil unit - possible, and the power supply filtering inside the radio would reduce this noise - but not at the antenna. The power wires from the coil will act like mini antennas and put this noise to anywhere it can find, the wiring harness and the ground plane, that being the vehicle itself.

Spark plug wires, another possibility - and the spark plugs.

Recommendation for the plugs, use a resistive plug if possible. If already installed, re-check the gap. Too big or small, will cause excessive current, tip erosion, and possible crossover arcing.

Arcing can be detected by running the engine up to operating temperature, and open the hood. Do this at night to observe any blue arcing. If you find any, replace the wires and definitely re-check the spark gap on the plugs.

It's not out of the question to try placing a power supply filter on the power wire to the power unit that supplies the coil with the pulses. Not on the coil, put it on the wires that powers the unit that goes to the coil.

This is on a Tahoe...hmmm...

Is the antenna a permanent mount? Mag mounts are, and always will be, prone to noise pickup - potential differences between the mag-mounts location and the radios own proximity to the noise sources.

Recommend that you use a permanent mount antenna. With Hi-Po miracles for engine - the noise will also follow. The coil case itself should be grounded - verify it is grounded to confine the field for the spark at the case, not all around the engine compartment.

Give the above a thought or two, and let us/me know if you've tried the above.

Usually, when you change to a hotter coil, the plugs should also be changed to accommodate the newer, hotter spark the coil will generate.

Of course you folks are going to slow up. The heat is too hot for y'all. HAHAHAH! The ISP warned yer stupid tails...no wonder, I heard they had over 80 separate complaints,,bwahahahahahahahaha! You think we don't know who is in the other group(s), yes, we know who he is, he only uses the same addy all over the place. But he is only in one, not one of you girls made thee cut to the other, hahahahahah! Once again, the truth rings justice. What Dogie does is of no concern to me. As long as I am hassled, ads are forged, it comes back to leee, all Lee, all the time. Why would Leland run back and forth between acces sites and post through MIBX? Hmmm, Leland? Are you going to say you did NOT post through MIBX Lee? Hmmmm? Too bad for Leland. Since my posts are direct retaliations to everytime one of you girls open your mouths, I guess if you two and the other joker lay low, my proof about Lreland will slow up as well, since, YES, YET ANOTHER COINCIDENCE....when I post nothing about Leland, nothing comes back, so since Leland seems to have so much influence over you girls. The problem with you girls is you found someone who won't roll over and die for you. Same as on the air, you bully people, only this time, you had the fecal matter shoved vack in your face. No matter. We accept your resignations. Think twice the next time you screw with someone who has done nothing to you. And I think you should prosecute whoever threatened you. If that person is still here, and you receive ANYTHING from a legal standoint, contact me, I PROMISE you I will have it dropped..and LEland, let's get ready to party, whatever Dogie sends my way comes back to you tenfold! Let's party!.and as I said once before...YOU GUYS LOSE!

4007. Re: Legitimate question: Engine noise

Newsgroup: rec.radio.cb

Is the radio wired direct to the battery?
"fgn1596@world.net" <skimickey@bewellnet.com> wrote in message
news:9b5t1lrp1@news.bewellnet.com...
Dear NG:

I have posted in the past seeking help with installations, and am once again at my wits end. BOTH my radios in BOTH my cars have a huge amount of engine noise that comes through the antenna (not power lead, I tested). Both are good radios (Uniden Grant and Superstar 3900) with Wilson antennas. The noise does rev up with the engine, but is so loud that the noise blanker is useless on sideband. Switching the NB on/off in sideband has no effect whatsoever. I have consulted numerous websites and information, and tried all sorts of fixes (grounding evrything, new plug wires, caps, etc.) to no avail.

My question is this: can the ignition COIL cause this type of noise? Both vehicles have aftermarket (hotter) coils in the interest of increased performance. My Tahoe has a Jacobs ignition unit. I called Jacobs and they were no help at all, just saying "yep, they sure do put noise into your CB, too bad." If I bypass the new coil, which is huge, and revert to the stock unit, no noise! Absolute silence! Is it too much to ask to want performance AND a radio? My other car's coil is an Accel superstock. When I reinstalled the stock coil, the noise was definitely lessened, though not completely gone like the Tahoe. Based on the suggestion of some others, I tried running caps from the leads of the coils to ground. Is it obvious to state that the car won't start when the + lead is shorted to ground? Anyway, I believe the problem is the coils, as I've eliminated about everything else, so if anyone has any tips, please help. Thanks in advance.

Mickey

"What? WHAT? I can't hear you my engine is running..."

Well Leland, I see you want to take this even further. Ok. Dogie, you are, uh, what was the self-labeled obscene "C" word you throw around so easily? You know the one, the one that shows your mother hated you as a child, rejected you probably, and messed up your relationship with women forever on? Wait here girls, I need to jump in my files. Oh, and I invited anyone who has a problem with me here two days ago. Open door policy and all that. I gave you 48 hours. No takers. That makes your self-labeled term appropriate for a stamp on your forehead, in addition to the yellow streak running down your black and white striped back!

Expect more of these incidents in the near future. Race riots will be commonplace in most U.S. cities within the next 5-10 years. All the evidence points to it.

This is precisely why I moved FAR AWAY from crime-infested jungles and resettled in a quiet, safe, rural area. An area which just happens to be 99+% white, English-speaking.

I would strongly advise you to do the same, before it's too late.

4013. Come on girlies!

I will give you half of it.

I'm hooked on the "Sopranos".

You didn't exist until I made that statement in the ng You have deja, use it, only don't let Leland the computer genius.show youm how to use it. See, KC8LDO has a degree in computers, only it took several lay persons, you know, just ones with amateur licenses to point out to Leland that a webtver was being forged. Now why do you suppose Leland can offer NO explanation whatsoever on this and his little ditty being under the keyclown punisha name? Simple. He was caught, exposed for the lying piece of vermin he is, and this is how loud he cries. Come again? Or should I get some of your past posts badabing to show you and dogie share the same vernacular and attitude?
You aren't even a good actor. Never did have me fooled. Oh, and the wep page proved no distraction eiher, the eyes are right here focused back on Leland watching him squirm as he offers not even an attemt at an excuse or offerings for his sins and transgressions. KC8LDO is a liar, forger, cheat, and arrogant human being. Other amateurs won't even have anything to do with him, except to point out his errors, which is all the time.

You must not have a job either Twist, you reply to everyone of there posts. So what does that make you Un-Employed? Incarcerated? You are replying to them, you are chasing them around, to other Ng's, I would say they are dictating play. As much as they are screwing up the NG, you are just as bad and even worse. Your post are all UN-intelligible since you either don't know how to quote people or feel the need to post the header info with every reply. You need to take 2 steps back away from the keyboard and go find a few productive things to do yourself. You make yourself sound and look silly.

Hello & Good Morning Twist,
While their actions and comments towards you are
wrong, your reactions to them are wrong.
You're actions to have them cease & desist the
comments are good, ISP reporting and such like
that. But this constant every time one of them say
something on here, then post your distain about them,
well that almost make you look as bad as them.
I wish you luck on this whole matter, and Happy
Easter to all.....

The Landshark

Source record: 78451

Twistie is hooked on the Sopranos because he can only sing soprano...like all those without testicles...

4027. No one cares who you "out", sissy twistieboy!

Newsgroup: rec.radio.cb
Date: 2001-04-13 16:11:53 UTC
From: antikeyclown@aol.com
Message-ID: <20010413121153.21747.00000020@ng-mb1.aol.com>
Source record: 78452

That's the point you forget. It is only a matter of concern in the fantasies you continue to live out. No one cares but you, sissieboy.

Aside from that...even if everything you don't like on here WAS posted by one person...so what? You are fair game as a result of your previous activities. No one here CARES if you "out" them or not. You know your own words and aliases have well proven these points.

Also...the bottom line is that your idiocy and insulting posts consume MORE bandwith. That is good from our point of view. The more time you keyclowns moan on here, the more time we AntiKeyclowns spend laughing about it.

You ALWAYS try to get in the last word, insult, snide remark, etc...the thing is you are to ego driven and inward looking <a common trait among sociopaths like yourself>to realize that you do exactly what we AntiKeyclowns want you to do.

Since we will NEVER leave the NG, you keyclowns went and made your own. That, in itself, is proof of the effectiveness of the AntiKeyclown faction. <not to mention one hell of a good laugh, as it is thoroughly penetrated>
You lost a couple of months ago.

It is obvious to everyone that you and your fellow keyclowns are unable to stop us. You tried and tried, and have NEVER, not for 1 day, silenced the AntiKeyclowns.

The question here is simple for those of us who are not simple minded sociopathic egotists: "Have the keyclowns gotten rid of us?" As the record shows, the answer is a resounding "NO!". You stated that we would be "G-O-I-N-G", and that AntiKeyclowns would "get FUCKED!" by this NG. Nothing of the kind has happened. We are here. We will never leave. You will likely not as well, which suits us fine.

You are nothing more than an object of ridicule and derision, sissy. Even your fellow keyclowns are starting to ridicule you.

The whole deal is in your mind and nowhere else.

Go back to being 1mangayboy...you were funnier then. Even N8 says so.

4028. Re: How fast can they track you

Newsgroup: rec.radio.cb

I can't speak for the Canadian regulators, but I *do* know that our FCC has installed new computers and antennas that are Very accurate. It seems they have been getting more active since then. I noticed they busted SEVERAL people for unlicensed operation on HF, jamming repeaters, playing music, and malicious interference. This, according to the RainReport (www.rainreport.com).

One thing I can't understand: In the case of licensed hams, I can't fathom why they would want to do such things--makes no sense at all. One guy, (non-ham, I believe) got a NAL (Notice of Apparent Liability) for $17,000 for unlicensed operation.

Bottom line is, FCC IS doing more, and I assume it is because of the new technology. The ability to pinpoint transmitters within a small geographic area has been around for a long time. One example is, the Emergency Locator Transmitters (ELT) for aircraft and EPIRBS for boats. These are tracked by satellites, signals are relayed to Langley AFB, and Civil Air Patrol forces are notified of the approximate coordinates in the US. They then DF the signal from the ground and close in on the offending signal. These devices are required by law and are used to aid ground forces in finding crashes or boats in distress. The next generation of these are expected to be FAR more accurate, generate fewer accidental activations (which cause CAP many a search only to turn off an ELT that got turned on by a hard landing, for example), and save many millions in search costs. Ironically, even during the Cold War, Russian satellites relayed ELT signals to Langley, and ours to the Russians. The same technology is (can be?) applied to finding illegal transmitters even if they are mobile. Think *you* can't be found? Wrong. We (CAP) once followed an ELT down I-26 from Asheville, on US 74 thru Rutherfordton, and on to Charlotte, NC on I-85. Actually the satellite followed it, giving us coordinates that were constantly changing. By following the trend of the changing coordinates, we were able to map out a "course" which ended in Charlotte. Ground forces tracked it to a UPS warehouse using simple triangulation. Not the first time that happened. We once found one activated in the trunk of a pilot's car! We've tracked them to private homes where the owner had removed it from the aircraft to replace the batteries--and many other "odd" places. Future applications of newer, more accurate technology will enable transmitters to be pinpointed with this method. Other versions of this ability do, indeed, already exist--such as the antenna/computer combinations recently installed near Laurel, MD. They can, quite literally, sit in that office, monitor "questionable" radio activity ANYWHERE in the country, and tell the agent where to find it! As to the satellites, that may be an additional task. I mean, they can photograph your car, and read the license plate from SPACE! LOL!

Guidelines Overview

We have adopted a philosophy that assumes the honesty and good intent of our subscribers, therefore our services are provided in as unrestricted a manner as possible to allow our users to have the fullest access to Internet as possible.

The extent of the "rules" that we enforce on our users is simply what the law demands of us.

Regulations
We are required by law to report any criminal activity that we become aware of. This applies particularly to software piracy. Be warned that if we find commercial software stored on our hard disk, we will report it and immediately terminate your service.
You may not make threats against another person via e-mail or news or any other electronic media/service we provide. We are prepared to defend your right to free speech to our fullest ability, but we will not defend you if you violate this simple rule.
You may not mount an attack against our system or any other. This includes mail bombing (sending three or more unsolicited pieces of e-mail or files exceeding 60K), or attempting to gain root access, tsunami or flood or annoyance utilities like "nuke" or "flash".
You may not "spam" or flood the usenet with a single post to a large number of newsgroups not related to the topic of your article.
Forging of e-mail or postings (to include cancel messages, whether manual or automated) will not be tolerated and will cause the offending account to be closed.

Ynnmail TERMS OF SERVICE (YTS)

----

1. ACKNOWLEDGMENT AND ACCEPTANCE OF TERMS OF SERVICE

The Ynnmail Service ("Service"), owned and operated by Ynnmail. ("Ynnmail"), is provided to you ("Member") under the terms and conditions of this Ynnmail Terms of Service (YTS) and any operating rules or policies that may be published by Ynnmail. The YTS comprises the entire agreement between Member and Ynnmail and supersedes all prior agreements between the parties regarding the subject matter contained herein. BY COMPLETING THE REGISTRATION PROCESS AND CLICKING THE "I ACCEPT" BUTTON, YOU ARE INDICATING YOUR AGREEMENT TO BE BOUND BY ALL OF THE TERMS AND CONDITIONS OF THE YTS.

2. DESCRIPTION OF SERVICE

Ynnmail is providing Member with a capability to send and receive electronic mail ("email") via the World Wide Web and on Ynnmail's own system. Member must: (1) provide all equipment, including a computer and modem, necessary to establish a connection to the World Wide Web; (2)provide for own access to the World Wide Web and pay any telephone service fees associated with such access.

In consideration for this Service, Member agrees to: (1) provide certain current, complete, and accurate information about Member as prompted to do so by the Service and (2) maintain and update this information as required to keep it current, complete and accurate. All information requested on original sign up shall be referred to as registration data ("Registration Data"). Furthermore, Member grants Ynnmail the right to disclose to third parties certain Registration Data about Member and Service membership in the aggregate; however, such disclosures will exclude Member's name, mailing address, email address, account and phone number, unless: (1) Member expressly directs Ynnmail, or any other person Member may specifically designate to disclose such information through the Service as provided by the Service or (2) Ynnmail is required to disclose such information by any applicable law or legal process served on Ynnmail.

If any information provided by Member is inaccurate, Ynnmail retains the right to terminate Member's membership and rights to use the Service.

3. MODIFICATIONS TO TERMS OF SERVICE

Ynnmail may change the terms and conditions of the YTS from time to time. Upon any change in the terms and conditions of the YTS, Ynnmail will notify you by posting the changes as a start-up screen prior to your subsequent use

of the Service. If you agree to be bound by the changes, you must again click the "I Accept" button that will follow the posted changes. If you do not click the "I Accept" button, you may terminate your use of the Service at that time.

Member's continued use of the Service constitutes an affirmative: (1) acknowledgment by Member of the YTS and its modifications; and (2) agreement by Member to abide and be bound by the YTS and its modifications.

4. MODIFICATIONS TO SERVICE

Ynnmail reserves the right to modify or discontinue the Service with or without notice to Member.

Ynnmail shall not be liable to Member or any third party should Ynnmail exercise its right to modify or discontinue the Service.

5. PRIVACY POLICY

Email is private correspondence between the sender and the recipient.

It is Ynnmail's policy to respect the privacy of its Members. Therefore, in addition to the privacy of registration data as discussed in Section 2 above, Ynnmail will not monitor, edit, or disclose the contents of a Member's private communications unless required to do so by law or in the good faith belief that such action is necessary to: (1) conform to the edicts of the law or comply with legal process served on Ynnmail; (2) protect and defend the rights or property of Ynnmail; or (3) act under exigent circumstances to protect the personal safety of its members or the public.

Member acknowledges and agrees that Ynnmail neither endorses the contents of any Member communications nor assumes responsibility for any threatening, libelous, obscene, harassing or offensive material contained therein, any infringement of third party intellectual property rights arising therefrom or any crime facilitated thereby.

Member acknowledges and agrees that certain technical processing of email messages and their content may be required to: (1) send and receive messages; (2) conform to connecting networks' technical requirements; (3) conform to the limitations of the Service; or (4) conform to other similar requirements.

6. MEMBER ACCOUNT, PASSWORD, AND SECURITY

Once you become a member of the Service, you shall receive a password and an account. You are entirely responsible if you do not maintain the confidentiality of your password and account. Furthermore, you are entirely responsible for any and all activities which occur under your account. You may change your password or icon at any time by following instructions; you may also set up a new account and close an old one at your convenience.

Member agrees to immediately notify Ynnmail of any unauthorized use of Member's account or any other breach of security known to Member.

7. DISCLAIMER OF WARRANTIES

MEMBER EXPRESSLY AGREES THAT USE OF THE SERVICE IS AT MEMBER'S SOLE RISK. THE SERVICE IS PROVIDED ON AN "AS IS" AND "AS AVAILABLE" BASIS.

Ynnmail EXPRESSLY DISCLAIMS ALL WARRANTIES OF ANY KIND, WHETHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT.

Ynnmail MAKES NO WARRANTY THAT THE SERVICE WILL MEET YOUR REQUIREMENTS, OR THAT THE SERVICE WILL BE UNINTERRUPTED, TIMELY, SECURE, OR ERROR FREE; NOR DOES Ynnmail MAKE ANY WARRANTY AS TO THE RESULTS THAT MAY BE OBTAINED FROM THE USE OF THE SERVICE OR AS TO THE ACCURACY OR RELIABILITY OF ANY INFORMATION OBTAINED THROUGH THE SERVICE OR THAT DEFECTS IN THE SOFTWARE WILL BE CORRECTED.

MEMBER UNDERSTANDS AND AGREES THAT ANY MATERIAL AND/OR DATA DOWNLOADED OR OTHERWISE OBTAINED THROUGH THE USE OF THE SERVICE IS DONE AT MEMBER'S OWN DISCRETION AND RISK AND THAT MEMBER WILL BE SOLELY RESPONSIBLE FOR ANY DAMAGE TO MEMBER'S COMPUTER SYSTEM OR LOSS OF DATA THAT RESULTS FROM THE DOWNLOAD OF SUCH MATERIAL AND/OR DATA.

Ynnmail MAKES NO WARRANTY REGARDING ANY GOODS OR SERVICES PURCHASED OR OBTAINED THROUGH THE SERVICE OR ANY TRANSACTIONS ENTERED INTO THROUGH THE SERVICE.

NO ADVICE OR INFORMATION, WHETHER ORAL OR WRITTEN, OBTAINED BY MEMBER FROM Ynnmail OR THROUGH THE SERVICE SHALL CREATE ANY WARRANTY NOT EXPRESSLY MADE HEREIN.

SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF CERTAIN WARRANTIES, SO SOME OF THE ABOVE EXCLUSIONS MAY NOT APPLY TO YOU.

8. LIMITATION OF LIABILITY

Ynnmail SHALL NOT BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL OR CONSEQUENTIAL DAMAGES, RESULTING FROM THE USE OR THE INABILITY TO USE THE SERVICE OR FOR COST OF PROCUREMENT OF SUBSTITUTE GOODS AND SERVICES OR RESULTING FROM ANY GOODS OR SERVICES PURCHASE OR OBTAINED OR MESSAGES RECEIVED OR TRANSACTIONS ENTERED INTO THROUGH THE SERVICE OR RESULTING FROM UNAUTHORIZED ACCESS TO OR ALTERATION OF MEMBER'S TRANSMISSIONS OR DATA, INCLUDING BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFITS, USE, DATA OR OTHER INTANGIBLE, EVEN IF Ynnmail HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

SOME JURISDICTIONS DO NOT ALLOW THE LIMITATION OR EXCLUSION OF LIABILITY FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES SO SOME OF THE ABOVE LIMITATIONS MAY NOT APPLY TO YOU.

9. NO RESALE OR COMMERCIAL USE OF THE SERVICE

Member's right to use the Service is personal to Member. Member may only be an individual: Member may not be a corporation or other business entity. Member agrees not to resell or make any commercial use of the Service, without the express consent of Ynnmail.

10. EMAIL MESSAGE STORAGE AND OTHER LIMITATIONS

Ynnmail assumes no responsibility for the deletion or failure to store email messages.

Ynnmail has set no fixed upper limit on the number of messages a Member may send or receive through the Service; however, Ynnmail retains the right, at Ynnmail's sole discretion, to determine whether or not Member's conduct is consistent with the letter and spirit of the YTS and may terminate Service if a Member's conduct is found to be inconsistent with the YTS.

12. MEMBER CONDUCT

Member is solely responsible for the contents of his or her transmissions through the Service.

Member's use of the Service is subject to all applicable local, state, national and international laws and regulations.

Member agrees: (1) to comply with US law regarding the transmission of technical data exported from the United States through the Service; (2) not to use the Service for illegal purposes; (3) not to interfere or disrupt networks connected to the Service; and (4) to comply with all regulations, policies and procedures of networks connected to the Service.

The Service makes use of the Internet to send and receive certain messages; therefore, Member's conduct is subject to Internet regulations, policies and procedures. Member will not use the Service for chain letters, junk mail, spamming or any use of distribution lists to any person who has not given specific permission to be included in such a process.

Member agrees not to transmit through the Service any unlawful, harassing, libelous, abusive, threatening, harmful, vulgar, obscene or otherwise objectionable material of any kind or nature. Member further agrees not to transmit any material that encourages conduct that could constitute a criminal offense, give rise to civil liability or otherwise violate any applicable local, state, national or international law or regulation. Attempts to gain unauthorized access to other computer systems are prohibited.

Member shall not interfere with another Member's use and enjoyment of the Service or another entity's use and enjoyment of similar services.

Ynnmail may, at its sole discretion, immediately terminate Service should Member's conduct fail to conform with these terms and conditions of the YTS.

13. INDEMNIFICATION

Member agrees to indemnify and hold Ynnmail, its parents, subsidiaries, affiliates, officers and employees, harmless from any claim or demand, including reasonable attorneys' fees, made by any third party due to or arising out of Member's use of the Service, the violation of this YTS by Member, or the infringement by Member, or other user of the Service using Member's computer, of any intellectual property or other right of any person or entity.

14. TERMINATION

Either Member or Ynnmail may terminate the Service with or without cause at any time and effective immediately. Termination shall be accompanied by a written notice to the other party. Ynnmail shall not be liable to Member or any third party for termination of Service.

Should Member object to any terms and conditions of the YTS or any subsequent modifications thereto or become dissatisfied with the Service in any way, Member's only recourse is to immediately: (1) discontinue use of the Service; (2) terminate Service membership; and (3) notify Ynnmail of termination.

Upon termination of the Service, Member's right to use the Service and Software immediately ceases. Member shall have no right and Ynnmail will have no obligation thereafter to forward any unread or unsent messages to Member or any third party.

15. NOTICE

All notices to a party shall be in writing and shall be made either via email or conventional mail. Ynnmail may broadcast notices or messages through the Service to inform Member of changes to the YTS, the Service, or other matters of importance; such broadcasts shall constitute notice to Member.

16. PARTICIPATION IN PROMOTIONS OF ADVERTISERS

Member may enter into correspondence with or participate in promotions of the Advertisers showing their products on the Service. Any such correspondence or promotions, including the delivery of and the payment for goods and services, and any other terms, conditions, warranties or representations associated with such correspondence or promotions, are solely between the corresponding Member and the Advertiser. Ynnmail assumes no liability, obligation or responsibility for any part of any such correspondence or promotion.

17. PROPRIETARY RIGHTS TO CONTENT

Member acknowledges that content, including but not limited to text, software, music, sound, photographs, video, graphics or other material contained in either sponsor advertisements or email-distributed, commercially produced information presented to Member by the Service ("Content") by Ynnmail or Ynnmail's Advertisers, is protected by copyrights, trademarks, service marks, patents or other proprietary rights and laws; therefore, Member is only permitted to use this Content as expressly authorized by the Service or the Advertiser. Member may not copy, reproduce, distribute, or create derivative works from this Content without expressly being authorized to do so by the Service or the Advertiser.

18. LAWS

The YTS shall be governed by and construed in accordance with the laws of the state of California, excluding its conflict of law provisions.

Member and Ynnmail agree to submit to the exclusive jurisdiction of the courts of the state of California.

If any provision(s) of the YTS is held by a court of competent jurisdiction to be contrary to law, then such provision(s) shall be construed, as nearly as possible, to reflect the intentions of the parties with the other provisions remaining in full force and effect.

Ynnmail's failure to exercise or enforce any right or provision of the YTS shall not constitute a waiver of such right or provision unless acknowledged and agreed to by Ynnmail in writing.

Member and Ynnmail agree that any cause of action arising out of or related to this Service must commence within one (1) year after the cause of action arose; otherwise, such cause of action is permanently barred.

The section titles in the YTS are solely used for the convenience of the parties and have no legal or contractual significance.

Realistic TRC 458: Not dead but needs some touch up on SSB. No mic. Physically, about a 9 to 9.5 out of 10. Can send E-Mail pic. There were 2 things done to it as far as appearance/circuitry. Not major. The RF Gain control was replaced. The new one has a shaft 1/16 longer than original. On PC board in rear, a part got hot and burned the board "slightly". A trim pot needed to be remounted "slightly" different. As I said, neither of these were of major consequence.

If anyone is interested, send me your best offer "shipped" and if I like it, we'll deal. Otherwise, it goes on E-BAY.

Other CB sets (mobiles 23/40 channels AM only) and accessories, parts, books, test equipment (O-Scope/Wattmeters (Not Birds) Meters/Freq Counters/RF and AF Generators) for sale.

Postal MO only accepted and gets same day shipping (except weekends and holidays).
Have dealt with many on newsgroups (Rec. Radio Antique and phono, CB and Swap), please feel free to inquire.

Interested parties please e-mail me directly.

Thanks...

While I do not approve of illegal radio operations, simply talking about
it, posting txt msgs ect. IS LEGAL, it falls under the freedom of speach
you know the peices of paper called the constitution and the bill or
rights. Talking about illegal matters is legal, DOING them is illegal,
this is a DISCUSSION (read talking) forum. while YOU my my friend ARE
partaking in illegal activities, with your off topic posts, cross
posting, spam, posting vulgar binaries in a NON binary group. So you
omplaining about them being illegal whule at the same time YOU are
illegal = pot = kettle = black.

For Sale: Yaesu FT101Z HF transceiver, good working order.
Fully tested 180W SSB.
FM fitted, covers full 11m (26-28MHz)
plus 160m-15m bands.
Boxed, complete with manual and fist mic.
150UKP. Shipping extra.
Please e-mail if interested, (photo available).

4039. FOUND: A KRIS 300M Factory Design Error

Newsgroup: rec.radio.cb
Date: 2001-04-13 18:50:30 UTC
From: "Dennis W. Ostrowski" <dwostrowski@lucent.com>
Message-ID: <3AD74A76.1E7D8DF7@lucent.com>
Source record: 78463

This is for all the 'technicians' out there,

I have reverse engineered the Kris 300M tube mobile amplifier and have found out why they self-destruct from thermal runaway while others of similar design do not.

It has to do with the the way they (KRIS) turn the oscillator on and off by switching bias through a relay contact on the antenna switching relay.

The Kris design opens the circuit between the bias network, (which consists of a 39 ohm,10 watt resistor, a 3 ohm,7 watt resistor, and a 10UFD at 25VDC Electrolytic capacitor), and the center tap of the feedback winding on the converter transformer, (via a seperate contact on the antenna relay), in order to turn the converter oscillator off.

The ends of that center tapped feedback winding terminate at the individual bases of the converter transistors.

Good design would require the presence of a shunt resistance from the bases to the emitters of the converter transistors that was low enough in ohmic value that any collector to base leakage current caused by heating of the the device would result in a voltage drop across that resistance which would not be great enough to forward bias the base-emitter junction of the transistor.

The existing 3 ohm,7 watt resistor in the bias circuit would have worked just fine for that function.

But the IDIOTS who designed the unit DISCONNECTED that bias system (and it's 3 ohm resistor) WHEN THE DC to DC CONVERTER OSCILLATOR WAS NOT OPERATING!

It was their method of shutting the oscillator off.

(And it didn't work very well when the transistors got hot because their 'leakage' curent could bias them on even if the 'normal' bias circuit was disconnected)

So when the antenna switching relay contact was not closed, the 'disconnected' center tap of the feedback winding was the only thing connected to both bases, EFFECTIVELY LEAVING THEM FLOATING AND DISCONNECTED FROM ANY OTHER PART OF THE CIRCUIT!

There is a rather large difference in resistance between a 3 ohm resistor and the MILLIONS of ohms of insulation resistance of a transformer winding or an open relay contact!

WHEN THAT RELAY CONTACT WAS OPEN THERE WAS ABSOLUTELY NO SHUNT RESISTANCE FROM BASE TO EMITTER TO NEGATE ANY THERMALLY CAUSED LEAKAGE CURRENTS!

NONE!,.....NADA!,.....ZIP!

THAT IS AN EXTREMELY POOR DESIGN; ESPECIALLY WHEN YOU ARE DEALING WITH GERMANIUM POWER TRANSISTORS ON SMALL HEATSINKS!

Because of that design error there existed a device temperature which could not ever be exceeded without the device going into thermal runaway, and that temperature was not very high because of the lack of any shunt resistance from Base to Emitter of the device.

That is why these amps worked fine while the owners were using them, and did not self destruct until after the owners turned them off while they were still hot from being used.

This should not be considered abuse or neglect on the part of the owners, but simply normal operation where someone uses their radio equipment on the way to their destination and shuts off their equipment when they arrive at that destination.

I believe that equipment owners have a reasonable expectation that if their equipment was fully functional when they shut it off, it should still be fully functional when thay turn it on again; no matter how hot it was when they turned it off!

Whenever the amp was keyed, that 3 ohm resistor in the bias circuit was shunted across the base-emitter junctions by the antenna switching relay, and was able to negate the effects of any collector to base leakage current that was caused by the device heating.

But that shunt resistance was there only when the device was keyed up, and not there when the amp was not being keyed or when it was turned off.

If the amp was turned off while it was still hot enough, THERE WAS NO PLACE FOR ANY COLLECTOR TO BASE LEAKAGE CURRENT TO GO EXCEPT TO FORWARD BIAS THE BASE-EMITTER JUNCTIONS, causing the thermal runaway to occur.

Simply putting that 3 ohm resistor on the OTHER SIDE of the antenna relay contact would have completely prevented the thermal runaway problem in that amp; making it as reliable as any of the others that were made at that time!

I WOULD HAVE TO CLASSIFY THAT AS A SERIOUS FACTORY DESIGN ERROR!

Regards,

Dennis O.

4041. Now on the "freeband"

Newsgroup: rec.radio.cb
Date: 2001-04-13 20:10:08 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3AD75D20.C33@bellsouth.net>
Source record: 78468

I am sitting here tuning around the frequencies above 11 meters and laughing! I never heard such junk in my life. Twenty seven dot five five five has a spanish broadcast station playing music. An argument on 27.455. More music on 27.535. So much noise on 27.655 that it's useless. More spanish up and down the band from there. Down on 27.370 there is a guy giving some fella heck about his foul mouth calling him trailer trash, truck driving, inbred Mongoloid, etc. Is this supposed to be the "freeband" where everybody conducts themselves so much better than the hams that *some* make fun of? LOL!

Jerry, this is one reason I hate to see the flames. I honestly believe it WILL get fixed sooner or later. Eventually, the whole area will become relatively useless for anyone - at that point, it will be abandoned or real enforcement will start. I recall a big problem some years back with the taxicabs in NYC using 10 meters. That got fixed. It just takes enough problems to attract a lot of attention. It will happen.

73 from Rochester, NY
Jim

Hello Dennis: Great Post!

> I WOULD HAVE TO CLASSIFY THAT AS A SERIOUS FACTORY DESIGN ERROR!

Yes I would agree.

If I remember correctly I have installed High Current Relay's to allow
the Kris 300M units to have no voltage applied to them, during off
times, so that they didn't run down the batteries. After being taken to
Buddy Sales down in in Reseda Ca. for a repair, thinking the unit was
broke due the power supply transistors got hot warm by just sitting
there, and adventually running down the vehicles battery. Nothing was
ever found wrong, and just a check out fee was charged.

Motor Homes and RV's where starting to become popular, that made a few
of the High Current Relays available, at RV shops.

There also a popular way that extra heat sinks where added to these
units, and others in a attempt to keep the power supply transistors
living a lot longer. I wish I had a dime for every power supply I
removed and replaced the power supply diodes, filter capacitors, and
then adding additional heat sinks, and then of course new power supply
switching transistors. I can't remember the old Motorola HEP replacement
number for the transistors, but the diodes where HEP 170.

The new external High Current Relays, where turned on with a sharp
looking little switch/light panel, that was also sometimes wired that
the ignition would turn on, after a 10 second delay, allowing the engine
to start, and have the alternator power things.

umn, kinda as a followup, i found the plans for a 1/4 wave ground plane antenna on the web

i built the antenna for about 7 bucks, right now its sitting on my back lawn,
i have been able to get the match down around 1.5 - 1.8 over all 40 channels

and have talked to stations 3-4 miles away with it sitting on my lawn.

i am gonna try to get the match down a little lower, then put it on the roof

kev.

>the second harmonic of 3.510 would be 10.530
>the third harmonic of 3.510 would be 13.840
>the fourth harmonic of 3.510 would be 17.850
>and so on.

Well, gee whiz. I must be dumb. Or math has changed. When I was a novice, you could buy a crystal for 3.510 and you could use it on 7.020.

Or you could use it on 14.040, and even on 28.080.

That was many years ago. As I pondered how you got 13.840 (since it doesn't divide evenly by 3.510), I finally realized what happened.

I used to operate on 3.510 Megacycles. Now it is 3.510 MegaHertz. Duh! I should have realized that during the conversion, plus allowing for inflation, we would see the frequency drop from 14.040 to 13.840. Things don't go as far as they used to!

Thank you ever so much for bringing this to my attention. In the future, I will be sure to use Hertz instead of cycles. And I'll definitely stop bragging about how long I've been a ham. I might as well stay in the present, rather than being an Old Fart who lives in the past!

Best regards,
QRM

Message-ID: <3ad798d8$1@news2.mibx.net>
Source record: 78569

Q: Did Twistedhed receive a jockstrap in the mail?

A: Many believe he did.

Q: Do you have details?

A: We think it came in a plain brown package and bore the Oldsmar, Florida address.

Q: No, I mean the *disgusting* details.

A: Well, it was a man's athletic supporter, size LARGE and it was covered with a yellowish dried fluid that the recipient stated "tasted salty". (We believe this was sperm) It also had traces of feces and urine on it (the recipient tasted these also).

Q: Ewwwwwww!

A: Yep. Yuck.

You must not have a job either

"either'...implies I was correct in my statement. We KNEW you didn't have gainful employment, you didn't have to tell us.

Twist, you reply to everyone of there posts. So what does that make you Un-Employed? Incarcerated?

"Hmmmm...yea..incarceration would be a good word, I can't go anywhere or do anything without a phone, camera, and pen."

You are replying to them, you are chasing them around, to other Ng's,

"Well, thanks for clarifying your lack of intelligence there Lea, er "badabing." I thought only Leland lacked the intelligence to know how to read forged posts."

I would say they are dictating play.

"I created you. What you say means nothing."

As much as they are screwing up the NG, you are just as bad and even worse.

"This really shows. You were on the short bus as well, no?"

Your post are all UN-intelligible since you either don't know how

"Maybe you should have stayed in school that sophomore year."

to quote people or feel the need to post the header info with every reply. You need

"Just like Lean and Dogie, always wanting to tell people what to do. I would say I dictate play, especially yours, since your arrogance would not allow you to not respond to my offer of a visit to the pile extended to my forger and wannabe protege. You answered, you figure it out, GENIUS! Just like Leland (another coincidence) you incriminate yourself, and NOT unlike spark, you stick your nose where it doesn't concern you. That makes ou, um, gee, let's see.....just as bad? Can you say h-y-p-o-c-r-i-t-e? Ha! Say it, you can't even spell it.

(to take 2 steps back away from the keyboard and go find a few productive things to do yourself. You make yourself sound and look silly.

"You have no idea what that means to me coming from you."

Let's see, so far I have received mega emails commenting on you Leland, and guess what? Not ONE had anything good to say. I am hearing from people I never even saw post before, some with calls. Seems you are a really liked guy (not) in amateur circles. What the hell did you do to those guys? OH, right, RIGHT! Another conspiracy, eh? Anyways, congratulations on fixing your grammar school authored page that we all just about choked on, our sides are still hurting from that one. No, I ain't really interested on posting anymore of your screwups right now, the entire group knows you are guilty, my point made and accepted by the contingency...what you believes doesn't matter anymore....you showed your skin when you attempted to shed it.

HAHAHHAHAHHA! WHATSAMATTER SON? HAHAH OLD TWISTED TOO MUCH FOR YOU TO HANDLE? AHAHAHA...I am beginning to think you're about 12 years old...man, can you whine..haha....anyway son,

From: fukkyou@twistie.com (AntiKeyclown Central)
From: AntiKeyClown Central
Subj: WANT THE NG BACK TO NORMAL? READ HOW!
****ATTENTION NEWSGROUP****
The AntiKeyClown Group is prepared to continue this horrible blitz INDEFINITELY.
Who's fault is it?
Your resident nutcase TWISTEDHED'S, that's who.

"Dogie, dogie, dogie. You just went off the deep end with a little kick from my boot. It's not like you came in here polite and I attacked you or anything. HAHAHHA!"

You can see
for yourself

"NANANNANANANANAN>hey, ey, hey,,,goo Bye!"

, he's a TRUE LOONY

"THIS, is true."

and will never stop his bufoonery. The flames
will rage forever.

"NO, they won't. We all saw your picture. Your time is almost up. You are checking out real soon due to that wonderful diet you keep of twinkies, pork rinds, and moon pies. I am in much better shape than you probably ever were in your entire life."

But there IS a way out.

"HAHAHAHAH" Whattya know. Begging DOES become you. Good dogie."

The AntiKeyClown Group will cease posting -
yes, we will cease totally - IF
TWISTEDHED LEAVES THE NEWSGROUP.
Make

"Son, no one makes twisted do anything he don't wanna. End of story."
him leave, and you can have peace. You have our word.
"The word of a porn poster that has maligned everyone on the group except (ANOTHER COOINCIDENCE) Leland, Doug, and Kari. BWAHAHHAHAHHA!"
This is worth repeating, junior.

It would be much more becoming of yourselves to come out and beg instead of insulting yourselves by actually believing that I would care what someone ELSE would do. See son, I am not a team player, which is why I work for myself. I do not get along good with other children, which is why I excel going it solo. I do what is best for me and mine, suckwind, I never cared what others thought, and cowards like you that think you may actually have a chance dictating what I may or may not care about is certainly entertaining in the notion that you give me this much attention.

****ATTENTION NEWSGROUP****

The AntiKeyClown Group is prepared to continue this horrible blitz INDEFINITELY.

Who's fault is it? Your resident nutcase TWISTEDHED'S, that's who. You can
see
for yourself, he's a TRUE LOONY and will never stop his bufoonery. The flames

will rage forever. But there IS a way out.

The AntiKeyClown Group will cease posting - yes, we will cease totally -
IF
TWISTEDHED LEAVES THE NEWSGROUP.

Make him leave, and you can have peace. You have our word.

-AntiKeyClown Group-

An admitted freebander and HF bootlegger in an amateur radio newsgroup telling making accusations about licensed amateurs. Very curious.
Jim

Aww, whatsa matter fecal brain, no one bite your damage control? Running out of names aren't we? AHAHAH! Funny how you girls must always resort to accusational lies. Yea, now I am a HF bootlegger.....did that fall out of your hibernating rear end after Leland removed his lips?. Hey, you just give me a great idea.....in my weekly ezine, I am going to mention that a few amateurs sympathetic to HF freebanding have donated the use of their calls every Saturday for the freebanders to use on HF only. Guess which two calls will be mentioned? I mean, if you are going to accuse me, I might as well have some fun with it, eh? NYUK NYUK NYUK! Send this to Uncle Riley, he's on my subscription list anyway...hahahahhaha!

twistedhed@webtv.net (Twistedhed) wrote:
Appears Leland and Doug are up to some tricks again. A peek into the cb room will see what they have been up to lately. Please check headers carefully when it looks like a troll, as it is probably forged. The numbert of phony posts in rec.cb that are traceable back to these two are astronomical. Below is a post from Leland under one of his alias names he was using at the time. He was having a bit of trouble ending his posts through the remailer. This post exposed who was behind much of the pornographical and obscene language on the cb group. He finally got careless and didn't delete his sig. about, "Morse Code." Doug continues to post daily, obsessed with policing our group for so much as a clipped clarifier or a mod, then accusing the poster of being homosexual. A careful archive search will reveal his nature and alignment with Doug, and their preoccupation with porn and graphic posts. In this very forum, Leland, a computer science major, (According to QRZ) was told by 2 separate amateurs that a post meant to look like it came from me was forged. Leland was adamant in claiming it was posted by me, but why, I have no idea. You would think a computer college grad would be able to tell a forged post from a webtver, no? I have asked him to explain this on many occassions, and when I do, well, just take a glance at the cb

room. There are many questions for which Leland will not answer, but the only answer I want, is why? These two folks are the poorest examples of amateurs I have ever come across. Hundreds of forgeries and pornographical posts are logged, and they are now attempting to cross post in order to further escalate their trolling. I do not post in amateur radio, so if you ever see a post from me, please check the headers, as it is a forgery. Have a good day.

They are both at fault. Leland was a good foot soldier until some folks on here who tired of his garbage found him out. Below is an exerpt from his resignation letter, posted an entire day after disinfecting their kennel and blowing Leland's cover. It was only posted AFTER he was exposed and this was an immediate way to attempt to save face, only you can't even do that right, can you Leland?

Once I saw what he was up to
  I just chose not to associate myself with him, in

  "Just when was THAT, Leleand? OH, that's right. The day after exposing you. HAHAHAH! We all know about Dogie, but you Leland, as a licensed amateur, should have known way better than to even align yourself with someone of his disturbed caliber in the first place. Keep the lies coming. So you approved of ALL his spoofing and porn garbage up until only until last week, eh? Many of us already knew what you were like Leland, so it comes as no surprise you heartily endorsed Dogie until getting caught yourself. YOUR words LEE, your words......BWAHAHAHAHH>>>Keep 'em coming, Leland, keep them coming! YOU, should follow the advice you like to give so well, in drag with your buddy as well as in this current persona, and vanish with your clipped tail into the night. Isn't that what you said you would do (Not, unlike (sigh) of course, Sparky) anyway?"

This little gem was uttered by "Sparky". Think the girls understand what they have written?

There is another legal term that is called "assumed risk", which you lawyers apparently have forgotten. In other words, if you step into a boxing ring, you should expect to get hit, and you can't blame anyone else but yourself if you do.

HAHAHAHHAH! Especially when you come into a place acing the fool, eh? Man, following your logic, you girls are pretty banged up, how else could I get you to cry so much and repeatedly BEG for help? HAHAHAH!

How about cleaning up the filthy nasty language, i'm trying to teach my grandson about radio and this is not the forum for your filthy language. This newsgroup has dropped to the level of the "CB" on air language. Why not go face to face a settle your differences. You know, pistols at high noon and get it over with. I'll supply the pistols, you supply the guts.

There are people here that just refuse to expound on there thoughts about the language for fear of being criticized, well that's just turning the other cheek. Well enough is enough.

Excellent thought Sparky. I vote "YES". It would be a pleasure to read posting from people interested in the same subject without all of the filthy language and personal bashing. I would bet, when this newsgroup was started the intention wasn't for these kind of postings.

1-It's not moderated, it's controlled access membership.

2-I hate the sound scratchy sound of competition amps.
I like the clean sound of Texas Stars.

3-I use stock radios with unpowered mikes and intact limiters.
No extra channels in my unhacked radios.

For those that have emailed me, I will answer all mail.
I'm just very busy. Please be patient. (even the week old
stuff will be answered)

As a public service to the NG, I will be offering to sell mobil amps to those wishing to buy them. This is not done out of greed but out of necessity to thwart the losers in the NG who think they have taken over OUR nice little group and can use it to harass and belittle as they see fit. To offer sale of these items is just the thing needed in a public forum to mess with these nil-minded simpletons. Amps such as Texas Star, Palomar, Cobra, Messenger, Gray, Galaxy, X-Force and so on. These will be sold for a limited time and at a VERY small profit IF ANY !
This is not a money thing so much as it is an access thing.
Since these self appointed radio/computer gods have declared knowledge an illegal thing also, I might just make the entire Secret CB book series available on CD along with a CD of amplifier schematics for base and mobil amps. Why is it that when these morons just think they are getting somewhere in their fight somebody like me comes along and pisses on their parade?
BECAUSE THEY NEED IT AND DESERVE IT!!!!!!!!!
E-Mail me with your needs......

Well most of the regulars come around
occasionally. Now to the newbies.....Well
these guys came around November and
found that no one can key on them, so
this guy Doug & Leland and others have
had this flame war with Twistedhed.
They keep posting with forged
address's and Twist keeps responding in
typical "Anything you can do I can do Better,
I can do anything better than you" the same for
the other agitators. Now don't get me wrong,
Twist isn't the agitator here, but he does keep
the flames alive.............

Pappy, please shut up. All you are doing is providing an audience to the head cases and in the process reprinting their drivel.

Might I suggest learning the filtering process on your reader. If you are using the good Mr. Gates' product, use the Message function at the top to either block the sender or make a rule which deletes posts from anonymous mailboxes (cotse, etc) or posts with certain words.

When you get good at it, you, like me, will be faced with the dilemma of whether to killfile people, as in the instant case, who repeat the crud you just filtered out.

Thanks,

Dick N&#65533;BK

4201. Re: MOBIL AMP SALE

Newsgroup: rec.radio.cb
Date: 2001-04-14 15:38:57 UTC
From: The Landshark <Landshark@TheLandshark.Com>
Message-ID: <Gb_B6.2$he2.5406@news.pacbell.net>
Source record: 78665

Heck Train I don't run any amps right now,
but I would be willing to donate a few to who
would use them in a proper and orderly fashion.
I have 2 Messenger 400, 2 messenger 1200,
1 palomar 500, 1 TX 800, 1 Texas star DX100,
1 Palomar 300 Base amp, 1 Messenger 1800,
Davemade M800 other assorted amps.
Now base stations, 1 SBE Consol V, Cobra
2000, Cherokee 1000. Mobiles 2 2950, 1
Cobra 29ltd, 2 Cobra 146, 1 President 2510,
Ranger 3500, Magnum 257. Mics 4 Silver Eagles,
3 Turner +3, 4 575M6, 1 D104 Hand held.
Antenna's 2 brand new super scanners, 2
antron 99, 1 Bigstick, 1 Army Bigstick, 1 Saturn V
4 or 5 assorted brands.
If you legal-eagles out there felt I left anything out,
please feel free to add it to my list, I'll see if I can
find you one.

The Landshark

WRONG.....This is just the thing we like in this NG. Douche bags such as you aside, many of the readers of this group will continue to post things to sell or their wants. To those wanting to post in this group.....KEEP IT COMING!!!!!!!!! We're reading the decent posts and enlarging our kill filters daily.

Now that's just ignorant.... People riot because of attitudes such as the one shown below... Think about it.

If you don't want riots, or people getting angry, first look inside yourself, and your attitudes.

Things left to float eventually bite you in the buns.

How do you think this happened (indulging in the Tech's ancient right to
speculate on the ancestry of the designer)??

1. Some low life copying a circuit who flat had no clue?

2. Some assembler who found it easier that way? Don't laugh, Boeing 707s
had some hairy incidents because someone used gas pliers to do crimps when
the supplied tool hurt his/her hands.

3. Some cost accountant? Excuse me, the term is Value Engineer.

4. An Executive Decision to move the resistor because it was getting
warm??

What's your theory, Dennis??

Train, why is it you are so rabidly devoted to putting illegal CB amps in the hands of CBers? Are you mentally ill, or just on drugs, or are you a hard core criminal, or what? We would all like to know.

By the way, I just finished a letter to the FCC recommending an investigation into your "business".

because
> we have "too much time on our hands"?

No......Because you think it's the crime of the century for a person to have an amp in thier posession and have the good sence to use it! Having grown up in and around radio and radio operators, I fully understand the charter that WAS ham radio. While these thoughts are now a thing of the past (to think it was actually encouraged for radio people to tinker with thier sets) it should not be and wake up calls are in the air. Hams have been the snobby elite of radio for years and they can't even figure out how to open the cases on the radios they use now. To think that a lowly CB radio person can still do this and know what they are loking at has to really piss off the ruling elite! (I really love that part). As for you singling me out to be persecuted by you? Go for it big man.....Come knock on my door even........If you have the BALLS!

As a public service to the NG, I will be offering to sell mobil amps to those wishing to buy them. This is not done out of greed but out of necessity to thwart the losers in the NG who think they have taken over OUR nice little group and can use it to harass and belittle as they see fit. To offer sale of these items is just the thing needed in a public forum to mess with these nil-minded simpletons. Amps such as Texas Star, Palomar, Cobra, Messenger, Gray, Galaxy, X-Force and so on. These will be sold for a limited time and at a VERY small profit IF ANY !
This is not a money thing so much as it is an access thing.
Since these self appointed radio/computer gods have declared knowledge an illegal thing also, I might just make the entire Secret CB book series available on CD along with a CD of amplifier schematics for base and mobil amps. Why is it that when these morons just think they are getting somewhere in their fight somebody like me comes along and pisses on their parade?
BECAUSE THEY NEED IT AND DESERVE IT!!!!!!!!!

Yea, that forge was so good I was even able to remove the builtin
encrypted webtv signature, and I sure figured that everyone could be
fooled by a hotmail addy...hahahahaa! This has Lean, KC8LDO, all over
it. Only one who majored in computer science and graduated from college
with a degree could consistently be this wrong about a webtv forge,
whattya say, Dogie? Isn't this the same thing that got him exposed
before? Couple this with your lousy communication skills and his
adeptness at computers, and man, you girls really are the three
stoogettes, no go start that poultry, er, newsgroup you are so
desperately seeking and craving attention through, oh, and take your
towel with you..it needed washed for months..hahahahaha!

Oh, and I really need to do something with Leland Scott, KC8LDO's post
below. It keeps following me. Something about Leland badgering me for
months through this name of "punisha" from an anonymous server and
forging me hundreds of times, even when ignored, just won't allow it to
go away. I guess it has something to do with his lying snake-like
nature."

Group: rec.radio.cb Date: Sat, Apr 7, 2001, 12:41am From:
punisha-no-spam@cotse.com (Punisher Of KeyClowns)
For the good of this newsgroup this character ought to say sayonara and
waddle off into the sunset. As it is, he draws flames and acts like a
buffoon. And he obviously doesn't care about what a mess he's making
here. Of course no one can side with such an idiot, and he knows it. His
time has come. Goodbye, Mr. Twisted!
=Punisher Of KeyClowns=
--
--
You ask w

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHHAHAHAAHHAHAA! LOOK at the post. Lelands sig is at the bottom. The impotent clown forgot to remove his sig about, "You ask what Morse code...." ahahahahahhahhaha

Leave now Leland! You are a disgrace. Defeated by the one I told you would be responsible for your demise....your own hand. Disgraceful amateur. You should be shunned.

It's not, if the power is turned down to the levels required by the FCC Rules, and only AM, LSB, and USB are used, when the radio is used on the 11M band... of course, it would have to be type accepted by the FCC for use on CB as well...

I'm not sure, but I don't think the 2510 is type accepted for CB, even if it was run at FCC rules' prescribed power levels.

It's perfectly legal for 10M...

4243. Illegal Computer on the internet....

Newsgroup: rec.radio.cb
Date: 2001-04-14 20:23:28 UTC
From: Sideband <sideband@spam.me.not>
Message-ID: <3AD8B1C0.663E763C@spam.me.not>
Source record: 78776

The poster of the EBAY humor posts today, and the Faggot Keyclowns Get Busted.... and the Dickhead Dicki Poo posts is utilizing an ILLEGAL computer to post these messages...

The computer used does not have reverse-DNS lookup on its DNS server, which is in direct violation of the Rules posted by InterNIC and the FCC, concerning IP-addressed computers on the Internet...

The person utilizing this computer is an Illegal Click-Clown, and he must go down.

Please feel free to forward all you want. As
stated "I don't run any amps right now,
but I would be willing to donate a few to who
would use them in a proper and orderly fashion"
Now how does that make me illegal? I don't
have a CB in my truck or bikes. Nothing set up
at home, just all this equipment sitting in a cupboard
in the garage. Boy, I'll tell yah, you sure jump
real easy.

The Landshark

Form Message
Subject: 1229642444 RN42020028 Questionable Item
Item: 1229642444
Message: This Item is an amplifier that works between 24 and
35
megahertz, which makes it illegal, as it is for use on the CB band". The
seller clearl stayes that this amplifier works from "10 to 40 meters",
which is the frequency range of 7 to 29.7 megahertz. Any amplifier that
works with less than 50 watts drive power, or on any frequency between
24 and 35 megahertz, is illegal in the United States. Please verify this
with ebay's FCC contacts if need be.

Hello,

Thank you for writing.

You are correct. Item #1228654777 does not abide by our guidelines and
we have removed it from eBay and have advised the seller of the policy
for amplifiers of this kind:

http://pages.ebay.com/help/community/png-scanners.html

Along with you, we want eBay to be the best site possible. We rely on
member reports, so your help is always appreciated.

Regards,

Les

This is rather amusing, all the crap posted here the last few weeks. It was bad enough before.

Ok, bottom line, while I do not agree with operating illegal equiptment, talking about it, sharing ideas, and knowledge is NOT illegal, this is a text (discussion) forum. Remember those peices of paper, the Constitution and the Bill Of Rights? These assure us ALL the right to talk about things we believe in, talking = mutual sharing of ideas and information. Just talking about it is NOT illegal. So we have the anti-keyclown fewls (yes I spelled that wrong but it is intentional, they aren't worth spell check) they are so bothered by people doing "illegal" activities on here, yet at the same time THEY THEMSELVES are partaking in illegal activities. All the spam, forging addresses, posting binaries (sick ones at that) to a NON binary group. These are all things they can lose their accounts for, and I am fortunate enough to have friends in high places at major ISP's across the country. Ever hear of the Undernet IRC network? It is hosted by the ISP's, I know all the admins personally. So I am going to start forwarding headers to the ISP admins.

In otherwords, you guys may have good intentions but you are going about it the wrong way. I am not a policeman, I am not a doctor, if someone breaks a law I will let the police and the judge take care of it, if someone needs surgery I will let the doctor take care of it. They are the professionals.

And while I know you are hams, I am not letting that cloud my judgement, I am STILL taking my exam for my ticket. and when I get it I will not be complete assholes like you, I will remember my roots and what got me involved in radio communications. I will work in harmony with cb operators for the good of the hobby. There is alot that can be learned by people sharing information.

You're right... because the posting host IP matches the same idiot who's been posting the EBAY humor, et al, posts...

nmap, nbname, and sdig have been very informative here... ::grin::

I don't yet have enough information to go to this person's ISP, but I will soon enough.

These characters aren't hams, they are bozos with Codeless Tech licenses. All this means is that they passed the exam intended for wives to get bread and milk brought home. When the Old Timers at the Club pee on their shoes and tell them it is raining instead of recognizing their inherent superiority, they come here to try to pee on your shoes. The Amateur Community has no more use for these clowns than you do.

Let me give you three web sites that will help in your licensing quest:

http://www.arrl.com good general site.

http://www.qrz.com for sample exams

http://ah0a.org for Morse Academy. Feel free to E-mail me although I am changing ISPs shortly as Earthlink is a monumental joke. They bought my ISP.

Doing the code instead of putting it off has the advantage of giving you 28.3-28.5 which may utilize at least some of your existing antennas and gear. You will also find that Element 2, the Tech written, is pretty trivial and covered well in a number of pubs. Element 3 is pretty non-technical but is something like your drivers exam on a larger scale.

The nice thing about passing all three elements is that now you, too, can ask how these characters are such great authorities on legalities having never passed an exam on them. You will also have privileges on all Amateur bands.

There is no inherent conflict between the services; these low-life are simply playing status games. I was an Amateur before CB was legalized so I have off-and-on seen it all. I will also admit to being an honest-to-goodness FCC-blessed Extra and dittybopper. Big Deal.

*** Looking up 205.188.199.48
-
*** Resolved 205.188.199.48 to spider-wl063.proxy.aol.com

they are using AOL. I have already spoken with the AOL admin about
them and send copies of the headers and the flooded spam posts ect.

I did the same with dougies posts from concentric.net oh btw
concentric.net has new ownership I will post the abuse contact info
here for you all to use

since dougie insists on doing the LEGAL thing and enforcing the
rules.... lets make sure HIS isp enforces them too

his ISP is not owned by XO communications

E-mail: abuse@xo.com
Phone: (517) 758.6500 or Fax (517) 249-6510
Regular Mail: XO Communications
Network Violations Dept.
4800 Concentric. Blvd.
Saginaw, MI 48603

since dougie wants to play god and tell everyone else what they can do
or not do. screw it he is breaking the rules as much as anyone else

Hello:

* Thank you for contacting abuse@xo.com and/or abuse@concentric.net.
We have received your e-mail regarding possible Terms of Service
violations.

Your message will be reviewed and resolved according to our Terms
of Service & Acceptable Use Policies. XO Communications customer
accounts that fail to abide by the Terms of Service may be fined,
terminated, or both.

SPAM COMPLAINTS
When e-mailing Network Violations with spam complaints please be sure
to include the full headers of the original post. If you have trouble
finding these, or copy/pasting them into an e-mail, our Web site -
<url below> does have instructions for some of the more popular news
and e-mail programs used on the Internet.
** http://support.xo.com/abuse/

If your issue regards a recent unsolicited mass mailing (spam)
involving
a Concentric customer we may have already resolved the matter. Abuse
will usually have all unsolicited email issues resolved within a day
or two.

Due to the large amounts of e-mail we receive we aren't able
to respond personally to all, but you can be sure that each will
be read and resolved by one of our Network Violations Team members.

Thank you for helping to curb network abuse.
Best regards,

The Network Violations Team
XO Communications

Aw, Train,
Ya hurt my feelings! Just when another ham and I started today covert-
ing a Bauer broadcast transmitter into a kilowatt ham transmitter for
160-10 meters. LOL!

You are exactly RIGHT!

The point has been made before on the group, but it was in vain. One
cal talk about amps, mods, and export radios all they want to, and there
is nothing that can be done about it. Talking and USING are two differ-
ent things.

Hi Dick, thx for the info I have already been browsing the arrl site
and have been taking the on;line practice tests, I pretty much ace
them every thime now, my biggest hurdle will be the code as I have a
hearing problem steming from abusing my ears when I was younger when I
played drums in a rock band w/o proper ear protection, which now
causes a constant ringing in my ears that is close to the same pitch
that code comes in with (at least the code I have heard).. a friend
has told me that there are code modulators that have adjustable pitch,
if this is the case then I can tune it to a pitch I can hear and I'll
be fine as long as I can take that to the exam with me

I was going to ask if it was one of the water jacketed models until I saw it
was only a kW. I would have to say.......Keep on tinkering with it and get
it running. We owe it to the radio folks that came before us to keep the
tradition alive as most of you know today's hams are unable to even turn a
screwdriver to open the case on their radio not less actually troubleshoot
it and repair it.

happy Easter to all the group,even to those who bear bad fruits,(Jesus said to judge people by the fruits they bear)remember it is not want goes into the body ,but want comes out of the body, (meaning our mouths) that we are to be judged on,we are (all) going to have to explain every word that ever came out of our mouths, be thankful that JESUS paid in full for all our sins, by dying on the cross, all he asks that we confess our sin and confess with our (mouths that he is lord and savior),the return of JESUS could be today or tomorrow or very soon,we all need to be prepared,as the bible says (do not be caught like a thief in the night) .GOD BLESS and happy Easter to all. CGL

You have my sympathy because I do not like the standard 750 Hz tone either. In my case it is just habit; I learned in the days of adjustable BFOs and my dad had left his high-freq hearing in the Southwest Pacific so I like a bit more of a growl. He liked it lower still; ever hear 35wpm of what sounded like stomach rumbling.

Morse Academy is adjustable and I run it about 670 myself. The exams are 13-16 wpm characters spaced at 5. I think the program is defaulted to these values.

VEs, and I was one, are required to handle physical problems within reason. I have done exams for the blind and the dying so yours would not be the worst by any means. Morse Academy can be used to generate exams so my best advice is to get with the VEs early in the process. Aside from the legalities, they are 99% dedicated and nice guys.

Case closed. It IS a legal radio for the use intended. Just because it CAN be made to do things not intended does not make it illegal. I've NEVER seen a radio that CAN NOT be made to go places that the maker did not intend. I still want to know how I could be a redneck when i live in Jersey?
As for the racial bilge you spewed, It's not worth comment!

Don't bother. The group's psychotics have jumped into a pit of delusional hatred. Instead of climbing out and joining the human race, they are attempting to justify their own behavior by trying to drag others into the pit with them. When anyone responds to their posts it just encourages them to post even more garbage, which is usually directed at the person who responds. If you want to make yourself a target for irrational spam, that's your business. I only ask you to think of the group first.

Sparky, FLCD

Hello & Good Evening Jerry,
You know, maybe a pair of Messenger
400's, one for the front speakers, one
for the rear speakers would suit you.

The Landshark

4331. Re: MOBIL AMP SALE BUSTED

Newsgroup: rec.radio.cb
Date: 2001-04-15 02:17:01 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3AD9049D.2531@bellsouth.net>
Source record: 78855

Yeah,

It came out of a small town radio station a couple years back--I think they upgraded to a bigger one. It's as clean as a pin, too! It's on 1390 KHZ (I almost said KC). It's operating, we just have to add a VFO to make it go all band, and a couple tweaks here and there (YIKES! Don't tell Leland and his buddies I said "tweaks" in here, he'll start screamin' KEYCLOWN, KEYCLOWN!

BTW, you ought to see my friend's shop. He's semi-retired, having run a CB and two way shop for about 40 years. He's got some really neat stuff, and parts to build 10 transmitters I reckon. He is near 70 y/o so ya can't blame him for letting up a bit. Oh, he will fix a CB or ham set for a few friends, but he's mostly quit--except for tinkering like we are now with the Bauer. Um, I'd better quit since the anti-keyclown fells might report me to FCC for TALKING about radios. If you'll email me, I'll tell ya some more of our "toys". LOL!

It's a pleasure to talk with you on the group about sensible things!

Your built in web tv id doesnt show when you use dejanews,

"I don't use Dejanews."

and the other usenet posting services stupid ass.

"Wrong. This has to be Leland to be so smart about computers."

But I forgot you are the king of Headers right

"No. Just your King. So keep worshiping me from afar.....and back on your knees."

you and your web tv. You cannot afford a real computer

"What in the world ever made you think I don't have a computer? C'mon Leland."

living below poverty can you

"I can't do anything. I am below poverty level, remember?"

You trailer park trash.

"OW! Please stop. Coming from you it is so hurtful."

D-uh! This from someone that came begging to me for a name! Sorry, no cigar, the webtv DOES have the encrypted sig and it IS present no matter what you do. Not even a good try, so it MUST be Leland, KC8LDO again. No one else is that ignorant to not know how webtv works. Also, ANOTHER COINCIDENCE is, in the above post, we have the nauticom addy present, the newsdawg.com AND...taaadaaa..the cet.com ("ol Sparky) HAHA! Oh yea, and take your towel with you..it needed washed for months..hahahahaha! Oh, and I really need to do something with Leland Scott, KC8LDO's post below. It keeps following me. Something about Leland badgering me for months through this name of "punisha" from an anonymous server and forging me hundreds of times, even when ignored, just won't allow it to go away. I guess it has something to do with his lying snake-like

nature."

Group: rec.radio.cb Date: Sat, Apr 7, 2001, 12:41am From:
punisha-no-spam@cotse.com (Punisher Of KeyClowns) For the good of
this newsgroup this character ought to say sayonara and waddle off into
the sunset. As it is, he draws flames and acts like a buffoon. And he
obviously doesn't care about what a mess he's making here. Of course no
one can side with such an idiot, and he knows it. His time has come.
Goodbye, Mr. Twisted!

Wouldn't happen to be yet another coincidence that you share an addy with the forgers in the group, eh? I mean, cet.com was present in that last attempted forge, sweepea. All a HUGE conspiracy and misunderstanding I am certain. A little spin, but you are at the helm, junior. So sit back and tell Leland to send out more invitations.

At the risk of getting "ratted out" (LOL), I know where to find plenty
of "illegal" amps, I know where to find "export" radios, but that
doesn't make me "guilty" of anything. Heck, I used to know where a
couple of moonshine stills were so did that make me guilty of makin'
'shine. No. I just knew not to go nosin' OR huntin' around them thar
parts (snicker). I don't use amps. I've got one in one of my car, but
it is legal for me. I don't really need it. Another thing that goes
over the "radio polices' heads is that IF he/they (whatever) are sending
all these emails to FCC and flooding their mails, they most likely are
just ignoring it--like the little boy (apt name for these nuts) who
cried wolf too many times.

I thought only hams we're snobs oooops.

If your a lurker and wanna see who does still use a CB in your state take a look at my site.

I am only here once for the real people who want to find people to talk decent talk with on the radio.
Here's the link http://www.stringsobsession.com/others.html use it if ya want.

Flame and I won't even know.

Cause I am back quiet finding a nicer place.

With warm regards,
Obsession

I wish I were doing the conversion and you had a boil on the butt. :-)

Been far too long since I worked on a nice piece of hardware. Before you convert it too much, take the time to appreciate the things they did to make it a rugged, reliable money-maker for the owner. Things they did to keep failures within bounds and fairly easily fixable.

Tell me when you are ready for 7295.

Dick N&#65533;BK, ex P1-15936, aging boy wonder.

No coincidence, I don't share an address with anyone here. If you want to talk to Rob (the owner of my ISP) you need to write something that he would be interested in reading. So far, nothing you or anyone else has written would interest him. In fact, nothing you have ever written interests me, either. But if you want to libel his business, I'm sure he and his lawyers would be very interested. Didn't I tell you to be careful where to point your legal finger?

Sparky, FLCD

Ok, guys, Here is my feeling. This newsgroup just needs to be shut down. We all know what is legal and illegal. The mud slinging and name calling here has gotten to the ridiculous side. I try to keep my filters on here,, but u guys keep coming up with new stuff. How bout just taking all ur junk to a chat room and then just really finishing it there.
Bill

I'm thinking that neither N8 nor Twistie can stand a full round inside the ropes. Why else would they spend all this time and energy begging for respect in this newsgroup? Because they are both pathetic dimwits and they know it. Respect is earned; and neither of them have done anything to earn respect here. Honestly, I don't think either of them are over 16 years old -- I have known many 4-year-olds with more maturity than they have shown.

You can shut down the newsgroup, but wherever the CBer's go, they will follow. It won't stop as long as there are people that will respond to their posts.

I'd like to start off by THANKING the 40+ people that have responded to my first post. It warms my heart to think there are a few more people out there that are ready to stop crying and start buying as the saying goes. This sale will only last through the middle of this week so get them orders in fast. For those interested, X-Force is by far the most popular amp being ordered. Looks like it's going to be a fun summer on the 11 meter band!
E-Mail me for your needs!
Train

4375. Densa Moderated Group is way of handling rejection!

Newsgroup: rec.radio.cb
Date: 2001-04-15 13:28:59 UTC
From: twistedhed@webtv.net
Message-ID: <11184-3AD9A21B-40@storefull-125.iap.bryant.webtv.net>

Let's put it this way: It takes a 2/3rd's majority vote to start a newsgroup, and there must be 100 more 'yes' votes than 'no' votes. Now, who want's a new, moderated newsgroup?

Whassa matter chickenhawk? No body want to play with your fat frame? Aw, poor chicke, er, spark, no one likes you...you had no takers when you said I would be gone, you had no takers when you cried for help with 'ol Twisted, now, you poor pathetic, leech, ahahahah..you cwy, er, cry harder each day (sigh), once more, so you can't say you were not warned, the good people on this ng are not as dumb as you look. Now quit begging and crying, for God's sake, son, have you no shame at all? Too damn dumb to read betwen the lines, you are not welcome here, loser! Your multi posts waxed your fate, BUT, don't let us stop you papp, er, Dogie er, Leland. 100 people, huh? AHAHAHA! You can't get 5 legitimate people to come to your aid, let alone 100. Go play in the alt.foreign.sex.pervert group. Now take your sorry excuses, pathetic cries and pleas for help and attention somewhere else, you will not get it here, except from me in the form of adding to your self- degradation. If you had any sense at all (but you don't, you think the group is as stupid as your porn group) you would stop crying and holding your breath for people to come to your pink side of the street. Now go and form yer moderated group with the tons of fake email nics you invent and talk to yourself with...we already have three groups, but of course, you already know this and have a serious problem handling rejection, so you pull down your skirt and make one last deserate plea......bwaahahahah! Oh, and Happy Easter! :) And try harder, I don't even have to expose you anymore, the entire amateur community knows that Leland C. Scott is exactly what I said he is, see, unlike you, I don't have to ask for support, I already have it.

4380. Re: Leland in full drag as Sparky tonight.

Newsgroup: rec.radio.cb
Date: 2001-04-15 13:43:02 UTC
From: twistedhed@webtv.net
Message-ID: <11185-3AD9A566-14@storefull-125.iap.bryant.webtv.net>
Source record: 78807

Wouldn't happen to be yet another coincidence that you share an addy with the forgers in the group, eh? I mean, cet.com was present in that last attempted forge, sweepea. All a HUGE conspiracy and misunderstanding I am certain. A little spin, but you are at the helm, junior. So sit back and tell Leland to send out more invitations.

No coincidence, I don't share an address with anyone here.

"Wrong. You do, and I showeed it.. Your lies bury you girls every time."

If you want to talk to Rob (the owner of my ISP) you need to write something that he would be interested in reading. So far, nothing you

"More spin. I never wrote them."

or anyone else has written

"Man, you don't even wait. You go straight to the lies. Malignant troll. Go satrt your playroom for the other short bus players."

would interest him. In fact, nothing you have ever written interests me, either. But if you want to libel his business,

"who mentioned his business? YOU did, like you stick your chickenhawk beak into everything else. YOU are the only one that mentioned his business. HAHAH! God, how can someone live to be so old and still have no sense?
"
I'm sure he and his lawyers would be very interested.

"WOW. I am so impresses. Bet you used spell check."

Didn't I tell you to be careful where to point your legal finger?

"Whatever delusional trip you are on now. And what did I tell you with your last threat of legality action? I told you if you have something, act on it, or shut your piehole, you have done neither, because A) you are a coward, and B) whatever you may lie about, I have done nothing, as my ISP told you, "if you have something, send it with headers to abuse@webtv.net, if not, this matter is closed."
So once again you talk out your beak in attempt to deflect your own problems.....yer yellow, chickenhawk, yellow, and the best part about it is. HAHAHHA...there ain't a damn thing you can do about it. Now go play with your one friend who believes you are somebody.!

Sparky, FLCD

Dana,
There are a few of us who have started doing a little reporting of our own in this NG. Our reporting is to the ISP's that are allowing this abuse of Usenet to continue. There is no reason we can't stand on the Net Admin.'s a little to get these losers to disappear and fast. The last thing in the world a Net Admin. has time for is to deal with crap caused be these *people*. I for one will start posting all needed info on the ISP's involved along with various contact info for the Net Admin. including phone, fax, and e-mail addresses. It should slow down very fast once the ball starts rolling and the NORMAL people in the NG start contacting these ISP's.

They are both at fault. Leland was a good foot soldier until some folks on here who tired of his garbage found him out. Below is an exerpt from his resignation letter, posted an entire day after disinfecting their kennel and blowing Leland's cover. It was only posted AFTER he was exposed and this was an immediate way to attempt to save face, only you can't even do that right, can you Leland?
Once I saw what he was up to
  I just chose not to associate myself with him, in
  "Just when was THAT, Leleand? OH, that's right. The day after exposing you. HAHAHAH! We all know about Dogie, but you Leland, as a licensed amateur, should have known way better than to even align yourself with someone of his disturbed caliber in the first place. Keep the lies coming. So you approved of ALL his spoofing and porn garbage up until only until last week, eh? Many of us already knew what you were like Leland, so it comes as no surprise you heartily endorsed Dogie until getting caught yourself. YOUR words LEE, your words......BWAHAHAHAHH>>>Keep 'em coming, Leland, keep them coming! YOU, should follow the advice you like to give so well, in drag with your buddy as well as in this current persona, and vanish with your clipped tail into the night. Isn't that what you said you would do (Not, unlike (sigh) of course, Sparky) anyway?"

HA! You girls get some support with more losers? Even the hammie folks slap you around like you are yesterday's thrown out poultry. Poor sap can't even get a crosspost troll going, but that is to be expected, especially since Lean, KC8LDO, is more than likely tutoring your little porn group. Dogie can't do anything on his own, and Leland does everything wrong and backwards. A perfect match. no wonder you girls hang tough. Now (ahem), Spark,...uh...er....hey, Spark! Sparky! Don't run off now, sweepea! How is that short bus ng coming along? How many applications you receive so far? AHEHEHEHEH!

>They think they have problems with illegal power,out of band
>transmissions,interference now.

Obviously a reference to ham operators.

>They aint seen nothing yet,they insist on littering my NG with
>profanity,prejudice and hatred.

Quit judging entire groups by the actions of a few. You don't even know WHICH of the renegades has a ham license, and which ones do not. You would not want the same standard ("If one does it, the whole group is no good."") applied to those who enjoy CB or this NG. So don't do it to others.

>We had it under control until they began harassing our NG.

There was nothing to get "under control". This is Usenet. Wake up. I (and a dozen others) have been on this NG longer than you, Sandbox. And we don't claim to "control" anything. Who appointed you? How do you rate referring to it as "MY" newsgroup. Why not OUR newsgroup?

> A fire has
>started that will build
>inside the hearts of every CBr on this group,

Any "fire" results because you and a couple of others insist on fanning embers into flames. If you will read some of the Internet resources about Usenet, you'll find the answer is quite simple. Don't feed the trolls. Not a crumb; not a single French fry.

>You can have my Ham license,i dont give a damn about it anymore.

Suit yourself.

"Don't let the door knob hit you
where the Good Lord split you."

I couldn't resist that one, but on
the serious side....Chuck you can't
turn someone in for voicing their opinion. If they threaten you,

"Many here they have."

Harassed you,

"Ditto."

obscene

"That's all they know."

, pornographic

"Like clockwork, each time they get smacked, out comes the porn."

Etc, Etc...

"And there are so many in that, "etc. etc." that aren't even mentioned.
It's a great idea. Only the ones with something to hide would have
something to fear from publishing network admins. number, addy's and,
faxes. I especially like the fax idea. The printed word carries SO much
more weight. I support the idea 100 percent. Go for it."

WOW! QRM seems to share Leland C.Scott's, licensed amateur KC8LDO and computer grad, inability to see forges, apparently from any domain. Either that or he chooses to perpetuate the ruse, not unlike the rest of the short bus crew (all 2 of them). The post erroneously attributed to Mad Dog appears to have originated overseas. Just another coincidence that a member of the porn posting posse happens to live overseas. Let me guess, QRM, you don't bother to read headers when responding...better yet, don't even bother replying.

..to effectiveness of Twisteds kicks.

The effectiveness of Twisteds kicks:

1. Antikeyclowns post, in an atempt to get twisteds attention. Twisted slaps chickenhawk, chickenhawk commences to consume bandwith bitching by repetetive posts and bleeding all over the place.

2.Chickenhawkt rushes to dress in drag as another nic, sparky, pappy, etc.

3. Chickenhawkie consumes bandwith with bitching, crying, moaning and begging us to "get rid of twisted" or else, and are ineffective. So chickiehawk tries to start another group in drag, only no one will play with her.

4. we sit back and laugh at twisteds predictable lumping up of chickenhawk and her porno behavior.

5. We post again, <see steps 2, 3 and 4>

Kari, Doug, Leland, and Sparky.

WoW! YET ANOTHER COINCIDENCE?

HAHAHAHHA!

The above was posted before Leland C. Scott, KC8LDO was single handedly
responsible for their demise when he so foolishly claimed he could not
tell a forged header from webtv, and he allegedly has a degree in
computer science.
At the time the chickenhawk posted this, he had no idea it would be used
against him within a matter of weeks. Happy Easter right back. Your
little tangled web of garbage you girls weaved so well looks great!.
Unfortunately, when we total all your IQ's, we are still in the double
digits.

hey twistfag, 'o licker of catboxes...If you are so amused, why do you support ISP ratouts? One of your recent posts did say this.

"If he would have said he supported drilling for oil on the moon I would have supported him. Matter of fact, I will support anyone that is in direct contrast of your pornographical postings, ranting threats, banshee wails, and bedwetting cries."

And dont lie motherfucker...

" MF? I plead no contest, I just turn and I shrug."

the "G-O-I-N-G", and the "get fucked" was when you were posing as 1mangayboy.

"Wow. Still can't get overthis dude, eh?"

You WISH we would go,

"My wishes are irrelevant. I do not waste time
worrying about people I can not make go away. Instead, I learned to control them."

CANT do SHIT about it,

"Actually, according to my email, I have many, many friends here...and to hear them tell it, I already DID it."

and as a result have to play sour grapes..

"Won't find a sour grape post from me, Junior. More like porn and crying from you. How goes the short bus hiarchy keyclown group headed by "Sparky" and brought to deterioration by Leland C. Scott, KC8LDO?"

YOUR shrink would call this the "grief pocess"..

"I don't have a shrink. If I have any grief, it is that you are a coward and are too scared to post your real email, so lets see how I do, my guess is it is either Leland C. Scott, KC8LDO, or Densa Dogie Adair, N8wwm. Is Kari, (OH8, ah hell, you get a free ride this time Kari, I can't remember your call,) still a member? Oh, that's right. We DID have a trollish post here today from overseas, didn't we?"

FUCK YOU CUNTLIP FACE!

"Your vernacular astounds us all. That truly hurts."

4436. Chickenhawk-Won't you cry just a little bit harder?

Keeping you busy

"I stay busy seven days a week. I have my play station to the internet to the left of me, my work station directly in front, and my radio to my right. When one of you girls post, I get an audible ding and glance to the left. I told you before your ignorance inspires me, which is why I have you on all day. Perfect."

running around,

"More like a swivel chair."

being the big hero,

"Hmmm..you said that once before. I guess that would explain your idolization, obsession, and compulsions of wanting to be me."

and posting more shit

"All the fecal matter has originated within your own contaminated litter."

on here...

If your statement is true, you would shut up to annoy us, but you won't...this exposes you as a liar.

"Great. I actually equate your opinion of me with that of the lost village inhabitants of Madagascar."

Hell Lean,, many would volunteer for it if you were the perp.

"I say Lean, and you jump. Absolutley freakin' amazing."

So if even 1 percent of the posts, about you being a convicted sex
offender, is true then you have already been on the receiving end.

"Receiving end of what? The only allegations have come from your kennel
of anonymous sex pervs. When one actually considers the source, these
statements mean even less than the words the chickenhawk used to form a
somewhat laughable pass at ironic self-induced redundancy. But YOU, on
the other hand, have already duplicated and displayed the ignorance you
posess so deservingly in attributing authenticity to posters in drag, or
quite properly in many instances, yourself."

What pll does this radio use?
I know the older 148's use the mb8719, but what about this one?
thanks
BC

AW, c'mon girls. That isn't how the game is played. I go back and find something incriminating on you porn posting sex pervs., and you pervs are supposed to go find something on me, not try to impress me with your (Now, a running joke among the hiarchy) poor forges and cries for attention in crossposting and crossdressing. Come on LEan, I know you can find something that isn't forged, surely you can.

Hey dink boy. You are convinced LELAND was "punisha", right?
Then how come "punisha" was asking Leland to contact him?
DUH!

Because it was to throw off the stupid, which, judging by your pathetic cries for members of your newly formed ng chickenhawk church and deluge of responses, none are to be found here. Now tell me why Lean tried convincing someone a forged post by me was authentic in a hammie forum when Leland C. Scott KC8LDO, allegedly has a degree in computer science? Can ya' do that dirtball? No? WHAT A COINCIDENCE! NEITHER COULD LICENSED AMATEUR LELAND C. SCOTT, KC8LDO ! How many coincidences involving the three of you girlie musketettes in drag?!

Kari, Doug, Leland, and Sparky.
WoW! YET ANOTHER COINCIDENCE?
HAHAHAHHA!
The above was posted before Leland C. Scott, KC8LDO was single handedly
responsible for their demise when he so foolishly claimed he could not
tell a forged header from webtv, and he allegedly has a degree in
computer science.
At the time the chickenhawk posted this, he had no idea it would be used
against him within a matter of weeks. Happy Easter right back. Your
little tangled web of garbage you girls weaved so well looks great!.
Unfortunately, when we total all your IQ's, we are still in the double
digits.

Or how can Mr. Scott defend his association with you other losers?
Dogie, we knew about, Kari and LEan exposed themself, and you so
cleverly handed it to us here on a platter. Huh!

Richard,

It made you sound like crap to begin with. Now that it's busted, it makes
you sound like crap, too. What's the difference?

At least we want everyone to think this, even if its not true. See, if people 'think' the FCC doesn't care, then they WILL stop complaining, and bingo! My illegal cb business is safe.

4470. Re: Where to send FCC complaints.

Newsgroup: rec.radio.cb

I am hoping that "right minded" people can help. How can we convince people that the FCC don't care about CB? If we can get people to think its hopeless, they will stop complaining. And if no one complains, I can sell my cb amps and modded radios and never get caught. Please post your suggestions here. Thanks.

Train

THE SCENE - Twistedhed's Trailer

TWISTEDHED: (balling up his fists, shaking with rage) Oooooh! Those nasty AntiKeyClowns have done it AGAIN!

NEBO: What's wrong, honey?

TWISTEDHED: Just LOOK at the newsgroup! Here's a new post titled, "Twistedhed Molests Gerbils"!

NEBO: Do we have any gerbils handy? We could furnace tape them and grease up their assholes and then I could stick my...

TWISTEDHED: (interrupting) I'm just too upset to think about gerbils right now. Those vicious, vicious AntiKeyClowns are on my mind. If only they would stop tormenting me.

NEBO: But this mess was all started by you, remember?

TWISTEDHED: Oh great, now YOU, my gay lover, are in on the conspiracy too? I bet the ARRL got to you. How much did they pay you?

NEBO: The ARRL is out to get you? What evidence do you have?

TWISTEDHED: Evidence? Hah! I have my own superior logic to guide me. I don't need "evidence"!

NEBO: Hey hon, I just had an idea. What if I bought some Easter Bunnies and duct taped them, and then lubed up their asses, and then I stuck my...

TWISTEDHED: (interrupting) Fine! GO! Go satisfy your silly sexual needs with animals. See if I care.

NEBO: Maybe we could find some underage children for you.

TWISTEDHED: (brightening) Really? Wow. This could turn out to be be a TERRIFIC Easter!

(They kiss)

Here's the deal.

I need your help to write to these guys ISP's and stop them before they write to my ISP and stop me.

My TOS say that I can't use my online service for any criminal or illegal activity. Now, all these guys have to do is send copies of my posts where I advertise illegal CB amps for sale to my ISP and I am screwed.

That's why we gotta act fast. Get them TOS'd before they get me TOS'd.

Train

Hello Richard: I know the Button-Olgy and reach ability of the jeeps. But you might also keep and eye on the radios with a Noise Blanker (NB) and Automatic Noise Limit (ANL), because in most vehicles a quiet radio is great to hear the distance stations, instead of the ignition noise hammering ya all the time.

I had a good friend who allowed the local CB Shop to install his CB Radio, with the stipulation that the engine noise had to be kept to a minimum. And they did a pretty good job with the mounting of the radio and antenna. And yes the radio was very quiet on receive.

Happy Easter to you and your family.

Looking for recommendations on a good compact size CB that is no more than 1.5 inches thick. That's all I have room for in my Jeep.

So far I have found:

Uniden 510 XL PRO - basic controls - $39
Uniden 520 XL Pro - basic controls - $49
Midland 77-235ESP - adds RF Gain, Mic gain, Scan, Wx - $79
Radioshack TRC-504 - adds RF Gain, Mic channel control - $79 ($59 on sale)
Radioshack TRC-519 - adds RF Gain, Wx - $99

Can anyone comment on these models or offer any information on others in the same size range?

Thanks in advance,

Rich

Hello Tad: I have one of those radios. And it uses the mic PTT switch to switch all of the radios transmit and receive functions. So it has like 8 wires in the Mic cord.

What I suggest you do is have a technician add a internal relay in the radio so that the relay can switch all the PTT functions, and this would allow the radio to use any type of mic.

Happy Easter!

: Now, who want's a new, moderated newsgroup?

I suspect that a majority would. However, you will have to follow the
proper protocol - if you want to start a moderated newsgroup.

The first step is the make a formal proposal and post it to this group.
In the proposal, you need to state why the group is necessary. You also
need to state how the group will function, and who will be the moderators.

After time for discussion, say a month, you need to call for a vote, with
an unbiased person to tally the votes. After the voting period ends, you
have the information to send to the powers that be to create the new group.

: Together, we can work to keep eBay a safe and fun place to trade!

Yeah. With enough effort, soon the only things legal to auction will be the King James version of the Bible. Everything else will be prohibited, because it can be misused by someone.

Ebay was never fun - just a necessary evil. The business has deluded itself about how people feel about it.

Bull. I don't run an illegal CB station, and no one is attempting to
keep me from posting to the group.

I have posted, a number of times, my feelings about "CB" amplifiers. I do
not like them - they tend to be overdriven and non-linear. I would much
rather see a CBer who wants to run power use good Ham gear instead. At the
same time, they could listen to the Ham bands and study for their Amateur
licenses.

Hi all, A problem has popped up with my hr-2510 and I need some help diagnosing it! out of the blue, the SWR meter began pegging itself on all frequencies. I tested the antenna system with another radio and meter, it's swrwas good.

also, with the radio off I'm reading .4 ohms across the coax connector (antenna feed wire to radio chassis) a visual inspection showed nothing shorting it.

has anyone experianced the SWR meters in these radios crapping out? Is the almost zero resistance across the antenna connector normal, or a problem with the finals?

thanks for any help anyone can provide,
Tate

For sale is this RCI-2950 from a recent ham radio estate sale. Please check out the pictures. Radio receives great and power output in SSB shown on power meter. Nice overall condition, No mobile bracket or operating instructions. Played around with it, looks OK. Display looks funny due to flash from camera, it is FINE!! Buyer pay's shipping of $14.00 UPS in the USA. Microphone is an ASTATIC mike with tone control on side. I am guessing but I think that this is not the original microphone but works great. Radio was tested and listened to on another radio, SSB is loud and clear, AM fine etc...
This is my reference link so you know who you are purchasing it from!

http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userid=rlonn@home.com

PayPal or BidPay will work for me. USPS Money order or cashiers check is fine.

4525. Roll-your-own 5/8 wave questions

Newsgroup: rec.radio.cb
Date: 2001-04-16 03:42:15 UTC
From: dB <doctorbeltway@hotmail.com>
Message-ID: <rStC6.11825$JV1.817328@news1.rdc1.va.home.com>
Source record: 78999

I basically want to make a 5/8 that outperforms the ones designed, tested and sold by pros on my first try without any decent equipment or antenna knowledge :-)

1. Will I be able to tune it right with just an SWR meter?

2. Is it worth the trouble to add 4 quarter-wave ground radials?

3. Do I insulate the 21.5 foot section from the base & radials section like a regular antenna or does the single-turn matching coil automagically do the insulating?

4. Is 6 feet of thin copper tubing OK for the matching coil? Would smaller diameter and more than 1 turn be better? What about those small vertical matchers? (gamma match?)

Well, those are the big question marks over my head... If anybody can add tips or suggestions I sure appreciate it.
Thanks!
#607 "Beltway" Va. Beach

Take it to the mythology newsgroups God boy.
There is enough crap on this newsgroup without introducing your mythology.
When are you going to learn. America is the most fucked up country in the
world because it the one most infested with your disease.
Hint: History tells us that Jesus never existed. Reality tells us there is no good
God.

I'm familiar with the process. I am also familiar that many proposed newsgroups fail for lack of votes. That's why I wanted to see just how much support there would be so I wouldn't be wasting my time. Although I am sure you are correct that a majority would use it, I don't see enough sincere interest to warrant the effort of creating and maintaining such a newsgroup. On the contrary, I am beginning to believe that there are many that actually enjoy this spamming war. Go figure. That's fine with me, I can think of better things to do.

>1. Will I be able to tune it right with just an SWR meter?

Nope. If you use an SWR meter, you are just matching the load to the
source. That doesn't mean your antenna is properly tuned. There are a
host of problems that can happen which will prevent your antenna from
working as expected while at the same time show a good SWR. In fact,
you can have 1:1 SWR with nothing more than a piece of shorted coax.

>2. Is it worth the trouble to add 4 quarter-wave ground radials?

A counterpoise is always necessary -- it gives the radiating element
something to "push against". For a 5/8-wave antenna the length and
angle of the ground radials depends upon how the antenna is matched.

>3. Do I insulate the 21.5 foot section from the base & radials section like
>a regular antenna or does the single-turn matching coil automagically do the
>insulating?

You need to determine the proper method of matching the antenna. This
is part of tuning the antenna. Since there are so many variables with
any home-built antenna, there are no definite values for building a
matching network. In fact, the length of your radiating element may be
different from your calculations -- you need to measure everything
properly.

>4. Is 6 feet of thin copper tubing OK for the matching coil? Would smaller
>diameter and more than 1 turn be better? What about those small vertical
>matchers? (gamma match?)

Like I said, there is no definite value. You said you wanted it to
perform better than one built by professionals. In order to do that
you need to know what they know.

>Well, those are the big question marks over my head... If anybody can add
>tips or suggestions I sure appreciate it.

There are several books at your local library on antenna design,
including the ARRL antenna design book. Most books on electronic
telecommunication will have two or three chapters dedicated to
antennas. That is the best place to start.

>I was wondering if someone could tell me where all this
>twistie/antikeyclown bullshit started?

This all began with a discussion about illegal CB operation. I have
two theories about what happened from there:

The first theory is that a few people from opposing sides began
exchanging threats. Neither of them have the balls to stand up to the
other f2f, so they spend their time in a battle of (dim)wits on the
newsgroup. The second theory is that their parents taught them to
behave this way. I tend to favor this theory the most.

No matter the cause, the effect will not stop until these children
grow up -- don't hold your breath.

Saddam Hussein and President George W. Bush meet up in Baghdad for the first round of talks in a new peace process. When George sits down, he notices 3 buttons on the side of Saddam's chair.

They begin talking. After about 5 minutes, Saddam presses the first button. A boxing glove springs out of a box on the desk and punches Bush in the face. Confused, Bush carries on talking as Saddam laughs.

A few minutes later the second button is pressed. This time a big boot comes out and kicks Bush in the shin. Again Saddam laughs, and again Bush carries on talking, not wanting to put off the bigger issue of peace between the 2 countries.

But when the third button is pressed and another boot comes out and kicks Bush in the privates, he's finally had enough, knowing that he can't do much without them functioning well. "I'm going back home!" he tells the Iraqi. "We'll finish these talks in two weeks!"

Two weeks pass and Saddam flies to the United States for talks. As the 2 men sit down, Hussein notices 3 buttons on Bush's chair and prepares himself for the American's revenge.

They begin talking and Saddam is uncooperative, Bush presses the first button. Saddam ducks, but nothing happens. Bush snickers.

A few seconds later, as Hussein continues his belligerence, Bush presses the second button. Saddam jumps up, but again nothing happens. Bush roars with laughter.

As things progress, then the third button is pressed, Saddam jumps up again, and again nothing happens. Bush falls on the floor in a fit of hysterics.

"Forget this," says Saddam. "I'm going back to Baghdad!"

Bush then says, through tears of laughter, "What Baghdad?"

From: "Dianne Henry" <diannehenry@hotmail.com>
Subject: Fwd: School Shootings and White Denial
Date: Fri, 09 Mar 2001 16:20:35 -0000a
Interesting commentary.....it's long but worthwhile reading. School Shootings and White Denial Tim Wise, AlterNet March 6, 2001

I can think of no other way to say this, so here goes: White people need to pull our heads out of our collective asses. Two more white children are dead and thirteen are injured, and another "nice" community is scratching its blonde head, utterly perplexed at how a school shooting the likes of the one yesterday in Santee, California could happen. After all, as the Mayor of the town said in an interview with CNN: "We're a solid town, a good town, with good kids, a good church-going town...an All-American town." Yeah, well maybe that's the problem. I said this after Columbine and no one listened so I'll say it again, white people live in an utter state of self-delusion. We think danger is black, brown and poor, and if we can just move far enough away from "those people" in the cities we'll be safe. If we can just find an "all-American" town, life will be better, because
"things like this just don't happen here." Well bullshit on that. In case you hadn't noticed,
"here" is about the only place these kinds of things do happen. Oh sure, there is plenty of violence in urban communities and schools. But mass murder; wholesale slaughter; take-a-gun-and-see-how-many-you-can-kill kinda craziness seems made for those safe places: the white suburbs or rural communities. And yet once again, we hear the FBI insist there is no "profile" of a school shooter. Come again? White boy after white boy after white boy, with very few exceptions to that rule (and none in the mass shooting category), decides to use their classmates for target practice, and yet there is no profile?

Imagine if all these killers had been black: Would we still hesitate to put a racial face on the perpetrators? Doubtful. Indeed, if any black child in America -- especially in the mostly white suburbs of Littleton, or Santee -- were to openly discuss their plans to murder fellow students, as happened both at Columbine and now Santana High, you can bet your ass that somebody would have turned them in, and the cops would have beat a path to their doorstep. But when whites discuss their murderous intentions, our stereotypes of what danger looks like cause us to ignore it -- they're just "talking" and won't really do anything. How many kids have to die before we rethink that nonsense? How many dazed and confused parents, Mayors and Sheriffs do we have to listen to, describing how "normal" and safe their community is, and how they just can't understand what went wrong?

I'll tell you what went wrong and it's not TV, rap music, video games or a lack of prayer in school. What went wrong is that white Americans decided to ignore dysfunction and violence when it only affected other communities, and thereby blinded themselves to the inevitable creeping of chaos which never remains isolated too long. What affects the urban "ghetto" today will be coming to a Wall-Mart near you tomorrow, and unless you address the emptiness, pain, isolation and lack of hope felt by children of color and the poor, then don't be shocked when the support systems aren't there for your kids either.

What went wrong is that we allowed ourselves to be lulled into a false sense of security by media representations of crime and violence that portray both as the province of those who are anything but white like us. We ignore the warning signs, because in our minds the warning signs don't live in our neighborhood, but across town, in that place where we lock our car doors on the rare occasion we have to drive there. That false sense of security--the result of racist and classes stereotypes -- then gets people killed. And still we act amazed. But listen up my fellow white Americans: Your children are no better, no nicer, no more moral, no more decent than anyone else. Dysfunctions is all around you, whether you choose to recognize it or not.

According to the Centers for Disease Control, and Department of Health and Human Services, it is your children, and not those of the urban ghetto, who are most likely to use drugs. That's right: White high school students are seven times more likely than blacks to have used cocaine; eight times more likely to have smoked crack; ten times more likely to have used LSD and seven times more likely to have used heroin. In fact, there are more white high school students who have used crystal methamphetamine (the most addictive drug on the streets) than there are black students who smoke cigarettes.

What's more, white youth ages 12-17 are more likely to sell drugs: 34% more likely, in fact than their black counterparts. And it is white youth who are twice as likely to binge drink, and nearly twice as likely as blacks to drive drunk. And white males are twice as likely to bring a weapon to school as are black males. And yet I would bet a valued body part that there aren't 100 white people in Santee, California, or most any other "nice" communities who have ever heard a single one of the statistics above. Even though they were collected by government agencies using these folks' tax money for the purpose. Because the media doesn't report on white dysfunctions.

A few years ago, U.S. News ran a story entitled: "A Shocking look at blacks and crime." Yet never have they or any other news outlet discussed the "shocking" whiteness of these shoot-em-ups. Indeed, every time media commentators discuss the similarities in these crimes they mention that the shooters were boys, they were loners, they got picked on, but never do they seem to notice a certain highly visible melanin deficiency. Color-blind, I guess. White-blind is more like it, as I figure these folks would spot color mighty damn quick were some of it to stroll into their community. Santee's whiteness is so taken for granted by its residents that the

Mayor,in that CNN interview, thought nothing of saying on the one hand that the town was 82 percent white, but on the other hand that "this is America." Well that isn't America, and it especially isn't California, where whites are only half of the population. This is a town that is removed from America, and yet its Mayor thinks they are the normal ones -- so much so that when asked about racial diversity, he replied that there weren't many of different "ethni-tis-tities." Not a word. Not even close.

I'd like to think that after this one, people would wake up. Take note. Rethink their stereotypes of whom the dangerous ones are. But deep down, I know better. The folks hitting the snooze button on this none-too-subtle alarm are my own people, after all, and I know their blindness like the back of my hand.

Does the 2510 still function well? Most 10m/11m radios have a TVI
circuit in the ouput stage to the antenna jack - usually a coil to
ground - thus giving the short-circuit that you mention. The final
would be isolated by an output capacitor, and you wouldn't see it at
the ant jack. It MAY be the adjustment trimmer went south in the radio
that's giving the SWR meter fits... these loosen up sometimes and
cause the meter to read full-scale all the time.

Tate's Laptop wrote:

Sure. You want posts? Do an archive search or email me. These two clowns came in preXmas last year and started swearing, forging, and preoccupied with homosexuals. They try to regulate speech, once one of them found a column I wrote for a magazine, they went ballistic with envy and have carried on, the way you see, ever since. Sparky is a liar, and is in on their little self-styled group they refer to as "Keyclowns". Do an archive search and watch the headers, you will see I have started absolutely nothing toward four or five folks, who are always on my ass, and these four or five folks are all the same three folks, Doug Adair, N8wwm, Leland C. Scott, Kc8LDO, and some funny guy from Finland. It died down recently, but these guys can't stand if I don't pay them any attention. I was ignoring them for awhile, and Leland C.Scott, KC8LDO, licensed amateur and self-bragging computer college grad, forged me in an amateur forum, a place I previously never posted in. Another licensed amateur pointed out to Leland C.Scott, that it was not I who posted, but a forger. Leland, a computer college grad, insisted to the amateur that the forge of a WEBTVER was authentic, and then attacked him on a personal level, attempting to engage the amateur in an argument, anything, to take the focus off of the poor college grads mistake. Leland then attempted to say it was HE that was being forged, but in those posts made a statement to another licensed ham alluding to a prior discussion they had. A forger would not have known this. When questioned on this matter, and many other lies that Leland has so expertly managed to expose himself in, he reacts with the fluff you have seen here, phony nics, porn, repeated posts, lies, begging for assistance, posting as new people daily, etc. I just wanted to know why. Obviously, by all of his posts, he is a very unhappy person, skilled in manipulation. It goes on. Of course, the guilty will reply to this post, so just go to dejanews.com and do a search. Believe no one. Watch the headers and make up your own mind. Have a good day.

Not sure what the original cause was, and I don't care to speculate.

All I know is that after 6 months or so of repairing returned amplifiers, it should have been apparent to the factory that they had a design problem.

And to my knowledge they never did anything to try to 'fix' it.

Regards,

Dennis O.

Where did you get your information that this was an ILLEGAL CB AMPLIFIER.

Wherever you got it; check it again becuase your information is incorrect.

> Dennis O. is obviously performing a helpful service for these illegal businesses.

Those who responded were all licensed ham operators.

What is illegal about repairing HAM repairing an FCC type accepted amplifier?

Also, it seems that there are more HAM operators on this newsgroup than there
are CB'rs..

What's illegal about providing technical information to HAM operators about an
FCC type accepted amplifier?

> What makes you applaud his actions?

Only they can answer that.

Well, so far all the commercial 5/8s (with or without groundplanes) I've seen have one of some type or another, and the one book I've been able to get my hands on had the 6-foot length of copper tubing as a one-turn matching coil. Believe me, I would rather not mess with the matching network unless I have to - it's just that I've never seen anything that would lead me to believe it wasn't necessary - before this. Thanks!

Thanks for the answers & suggestions, SSB. Asking for CB antenna help in the amateur forums has never been too helpful in the past, so I figured this would be the place to find some CBers (and hams, even) willing to bring some of the advanced stuff involved in making a 5/8 down to a layman's level. Thanks again.

> knowledge :-)

That won't happen.

> 1. Will I be able to tune it right with just an SWR meter?

If you put the meter at the feedpoint or use a resonated
cable you'll be pretty close.

> 2. Is it worth the trouble to add 4 quarter-wave ground radials?

That'll depend on the design you choose. In most cases
the radials are there as coax isolation rather than to form
a ground plane. If that's the case, an easier and cheaper
way to minimize coax radiation is to use a 10 turn coaxial
choke at the feedpoint and run the coax down the mast
directly under the antenna as far as possible.

> 3. Do I insulate the 21.5 foot section from the base & radials section
like
> a regular antenna or does the single-turn matching coil automagically do
the
> insulating?

You should know the answer to that based on having
an understanding of the design you're going to use.

> 4. Is 6 feet of thin copper tubing OK for the matching coil? Would smaller
> diameter and more than 1 turn be better? What about those small vertical
> matchers? (gamma match?)

You need to do some homework. The design you choose
will have suggestions on what materials to use.

> Well, those are the big question marks over my head... If anybody can add
> tips or suggestions I sure appreciate it.

Forget the whole thing and just buy a Maco V-58.
It's what you're trying to beat. Based on what you've
written here, you're understanding of antenna design
is so low that you'll be lucky if your homebrew
antenna is equal to the performance of a 6 foot
base loaded mobile. Once you get the V-58 working
right you can take some field strength measurements

that you can use as a baseline for comparison with
your future homebrew efforts.

> Why mess with a Gamma match on an antenna which should be tunable by
varying the
> lengths of the groundplane radials and radiating element?

Because what you're saying doesn't apply to
5/8 wave antennas.

In other words, an impedance matching network
is required because the feedpoint impedance is
not close to 50 ohms naturally. The only reason
for using a 5/8 wave radiator is that theoretically
it's supposed to have the lowest angle of radiation
of any single element vertical. The length of the
antenna must be fixed to get that effect. The
impedance matching netweork is used to maximize
power transfer (equal to minimum SWR, minimum
reflected power, and maximum field strength) into
the antenna.

Twisted, you can't tell the real posts from the phony ones to save your life, much less even "guessing" who posted them. Recently you have been accusing anyone pointing out your errors as a forger. Even some of the long time CBers on this news group don't want to have anything to do with your hallucinations about conspirators everywhere you look. Take a good look around Twisted, where are your "friends" now? I don't see anyone rushing to defend you and your crazy remarks. You made a total fool of yourself, chased away your compatriots who supported you in the past, just to let you stew in your own errors, and left you to twist in the wind at the end of the rope you so willingly stuck your neck in to.

You performed this totally remarkable act through your own design, with no other thought in mind other than a sense of misguided vengeance, and have successfully isolated yourself from anyone who could kelp you Twisted. You continue your totally in vain vendetta compounding your foolish errors, demonstrating to the multitudes your complete ignorance, and ineptitude at reading news group header files. The longer you keep it up the more you just become the group's resident circus clown no longer taken seriously by anyone.

Personally I don't care what you say about me, or anyone else for that matter, because nobody takes what you say seriously anymore.

I understand. So if I work out the coax velocity factor and adjust the
radiator's (and GPs also, probably) length accordingly for resonance on
27.185, as well as taking relative field strength measurements with the
SWR/FS meter, do I have a chance at tuning somewhere near optimal?

This is what I thought, but antennas like the Imax-2000 that claim no
groundplanes are needed sort of made me wonder if the benefit was worth the
extra parts and construction. What I'm thinking about is pretty much like
the Maco V58, with the one-turn matching coil and groundplanes. I just need
to find out if the top is insulated from the bottom, and how long the GPs
are.

> >3. Do I insulate the 21.5 foot section from the base & radials section

> different from your calculations -- you need to measure everything
> properly.

So insulating the radiator from the GPs & base isn't always necessary? I've never been able to take apart or even eyeball a 5/8 in person to find out if the two are insulated from each other, but the pictures I've seen always include some type of adjustible matching network between. I wouldn't be able to calculate or make an exact, no-adjustment matching circuit anyway.

> >4. Is 6 feet of thin copper tubing OK for the matching coil? Would

> you need to know what they know.

Maybe I was a little too facetious in saying I want to beat out the pros on my first 5/8 attempt, but deep down I think every antenna homebrewer (advanced or first-timer) has that bouncing around in their heads. To be honest, I'd be happy if it worked well with no interference to the neighbors. Logic would suggest that one-size-fits-all commercial antennas incorporate some type of "optimal" specs in order to function well with all the variables and only two threaded rings (Imax2K) or the one-turn matching coil (Maco V58) available for adjustment.

I have read some of the lower level antenna books, which is where I got the idea for this 5/8. The higher-level stuff tends to give me the heebie-jeebies. I'm not much for advanced mathematics or circuit building, and I don't have a lot of spare cash to buy test equipment (or commercial antennas for that matter). I just thought I would see if any antenna guys around here had some practical advice or maybe even some plans they had used. Thanks for the suggestions!

Touche! Thanks for making my point to not only yourself, but to the world. I think you have a problem with that part where I stated the ng isn't as dumb as you look, at least in the comprehension department. Note the manipulation, (will not acknowledge Leland C. Scott's lies) sexual references, and accusations toward another when confronted. Same exact tactic employed in every one of his posts, going back to where Leland started it all in a hammie forum, where he hurled accusations at another ham for pointing out his error. Same exact arrogant posts, and he tries so terribly hard to mask his exposed stench. The posts are archived and available to anyone who wishes to search. Hundreds of phony posts lead to Leland with the headers a perfect match. Since he began his campaign of nastiness for attention, you will find no forged posts from me, with the exception of a technical question I asked back around the holidays under a different webtv nic to avoid the garbage like Leland posted above. As I said, believe neither one of us and do the search yourself, watch the headers, and make up your own mind.

> extra cash!

They're only $70. You should be able to save that
in a short period of time. In the meantime, put
up a homebrew 1/4 wave groundplane. They are
easy to build and get working, and the performance
is plenty good enough to get by with until you can
afford the V-58. A 1/2 wave dipole made from coax
or pipe is another good homebrew choice while you
save for the V-58. A run of coax and two 9 foot
pieces of pipe is all you need. Run the coax
through one piece of pipe. Attach the shield to
that piece of pipe. Attach the center lead to the
other piece of pipe. Make the pipes a little long
to begin with so you can trim them for lowest SWR;
or, you can just use a tuner (aka matcher) to achieve
a conjugate match. In either case the performance
will be virtually the same (the same as a Big Stick).
The performance may be good enough to where you
won't need or want the V-58.

The bottom line is that a 5/8 wave is more of an
intermediate homebrew antenna project. 1/4 wave
groundplanes and dipoles are the basic projects.
And the difference in performance between all of
them is nothing big. The knee-jerk answer that
everyone gives is that the 5/8 wave is the best
performer, but that isn't always the case. The
problem is that the coax is rarely completely
kept out of the picture. It's been proven through
experiment that for a 5/8 wave to achieve the
theoretical level of performance the radials need
to be 5/8 wavelength. With shorter radials the
coax involvement increases and the performance
ends up being about the same as a 1/2 wave.
And all of that assumes that the antenna was
designed properly (the physical length is actually
5/8 wavelength at the operating frequency and
the impedance matching network is efficient).
Why go through all of that when you can easily
make a 1/2 wave, get the SWR close by trimming,
and achieve a conjugate match with a tuner to

maximize the performance? The difference between
that and a V-58 (that doesn't have 5/8 wavelength
radials) will be very little.

I hope this helps.

Nope, I'd say pretty high on the old Trollometer.

Here's one for ol' "Christian Mythology...."

Let's suppose that he, like most who talk like him, need to see something to believe it exists. Well I doubt that he has ever seen or touched his own brain. So by his standards his own brain doesn't exist. But to read his post he clearly is speaking from ignorance, so I give it that much credit....

...I hate it when I hit "send" when I meant to hit "save!"

...anyway, as I was saying....since this is the same guy who is filling this newsgroup with trash about "fags" and "Keydowns" his credibility is zero. He is too much of a coward to show himself so he posts anonymously. Sounds like someone I used to call "Howard the Coward." I wonder if that guy is still around?

BTW -- the only one he got right is number 4. Christians ARE in the minority, so what -- at one time there were only 12, now there are millions.

bzzzt -- wrong,.try again.

> >
> > 2. Says earth is 6000 years old

wrong again, try 10,000 or so. Radiometric dating has its flaws. I won't go over your head with a lengthy explaination.

> >
> > 3. Says "I AM THE TRUE RELIGION"...just like Catholics, Jews, Moslems, Bhuddists, etc...

wrong again. Christianity is not a religion, it is a faith and a relationship. Jesus doesn't say that He is the "true religion." He says "I am the way, the truth and the life."

> >
> > 4. Is a minority religious text...LOTS more Bhuddists and Moslems.

ding ding ding ding ding -- correct answer! Yes, we are a minority -- GIVE THE "MAN" A CIGAR!

> >
> > 5. Is cynically manipulated by people who make $$ off it.

Nope, you've been watching too many "tv preachers." Most of them I would not consider to be "Christians."

> >
> > 6. Was written by MEN...not God<God doesnt exist..NO ONE has ever proven
> > God's existence>

Yes, men did the writing but God did the dictating. As far as wheter or not God exists, read the brain analogy above.

> >
> > ETC ETC ETC...
> >
> > Christian Mythology
> troll meter =0

>27.185, as well as taking relative field strength measurements with the
>SWR/FS meter, do I have a chance at tuning somewhere near optimal?

I think you are missing the point. A 5/8-wave antenna is not a
resonant wavelength, so it must be made resonant. How that is done
depends upon the design. It could have inductive reactance added to
make it a full-wave resonator, or it could have capacitive reactance
added to make it resonate at a half-wave. One will insulate the
radiating element, the other will not.

Also, your counterpoise can be very different from one design to the
next. For example, the antenna might be fed from the half-wave point
and the counterpoise can be the remaining 1/8-wave plus 3/8-wave
radiators. Or the radiators can be 1/4-wave and reactance added to
bring the feedpoint to the 3/4-wave point, which is probably what you
have in mind.

The other factor to consider is feedpoint impedance. This changes
along the entire length of the antenna. Other things affect feedpoint
impedance, such as the angle of the radiators, proximity to other
objects, etc. You won't know exactly what that impedance is going to
be until you hoist and measure it. If it isn't close to 50 ohms you
will need to do some impedance matching for the best performance.

BTW, if the length of your coax changes your SWR, then your coax is
radiating as part of your antenna. Unless you want this to happen,
it's bad.

>This is what I thought, but antennas like the Imax-2000 that claim no
>groundplanes are needed sort of made me wonder if the benefit was worth the
>extra parts and construction. What I'm thinking about is pretty much like
>the Maco V58, with the one-turn matching coil and groundplanes. I just need
>to find out if the top is insulated from the bottom, and how long the GPs
>are.

Please learn to make the distinction between 'ground-plane' and
'counterpoise', even if others do not. Some of those 'no-ground-plane'
antennas use the coax as a counterpoise (avoid), and others have one
built into the bottom half of the antenna. No ground-plane is needed,
but some make it optional. These optional ground-planes are mostly for
show, and can actually disrupt the antenna's radiation pattern if the

antenna is not properly tuned.

>So insulating the radiator from the GPs & base isn't always necessary?

It depends on the design.

>I have read some of the lower level antenna books, which is where I got the
>idea for this 5/8. The higher-level stuff tends to give me the
>heebie-jeebies. I'm not much for advanced mathematics or circuit building,

>antennas for that matter). I just thought I would see if any antenna guys
>around here had some practical advice or maybe even some plans they had
>used. Thanks for the suggestions!

You can buy or build an antenna matching unit for next to nothing, and
with it you can use almost anything for an antenna. Test equipment is
cheap and easy to build yourself (my site has a couple pages about how
to make some simple RF test equipment -- www.cet.com/~sparky). With a
good antenna book and a little patience, you can eventually make an
antenna that performs as well -- if not better -- than those made by
the pros. Just keep working at it.

Massive clean out......Different pieces of test equipment (MOST is used and working in fair to decent shape) ie; RF Generators, Audio Generators, Oscilloscopes, Power supplies, Frequency counters, Sencore CB 42 Analyzer (needs some repairs), Wattmeters (NOT Bird or Telewave), CB/10 m Base Antennas (NEW though 1 is in "opened" container), some older CB mobile sets (40/23 channel AM). Books, parts, etc. If you need something - I may have it. ASK! Brand names on some of the equipment is EICO, B&K, Radio Shack, Olsen, Digimax, etc.

Have a Turner SSB Microphone, one mic similar to it, for parts. Many items too numerous to list. As I said, if you are looking for some thing special, ask.

UPS Shipping is extra. Postal MO gets same day (businessday) shipping.

E-mail directly to me. IF you are in Pittsburgh PA area, I'm only 40 miles south of the city.
Have other items I can offer to those in area. Such as a tower, etc. Will NOT ship that.

I have sold numerous items via the Radio related news groups and E-Bay. Feel free to inquire before buying.

Source record: 79101

History? What history? Prove that Columbus came to America. You CAN'T! Yes, you have documents, ship's manifests that SAY he did. But you in and of yourself can't PROVE it. If I am not willing to believe it, you can't convince me. If I choose to reject the history that tells me Christopher Columbus came to what was then called the New World, then you can't PROVE it to me. So, therefore, using your same logic, we are even.

Whether you admit it or not, you live on certain faiths. You believe that, when you finance a house or a car, you will live to pay for it. You don't KNOW you will be alive tomorrow, but you and I both live our lives believing you WILL. If I knew I were going to die in 24 hours, I wouldn't go out and buy a car, leaving my estate to settle the debt. So you choose to believe, or take for granted, that certain things are true. I do the same things and I choose to have faith that the things the Bible says are true. And, BTW, the King James translation is just THAT--a translation into the language of the people, where previously, it was in Hebrew or Latin. The Latin was used by a certain church to control the beliefs of the people. King James' intent was just the opposite--to FREE the people from religious control.

I used to work with someone just like you, Mr Troll, who went around spouting declarations that there is no God, etc, and cursing the Bible as myth. One day, he was walking thru the shop where a worker was charging a hydraulic cylinder with compressed air in order to force the rod out to its end stop. There was a tremendous explosion and the rod shot out of the cylinder striking "Kelly" on the leg just as he was waling past. It knocked him several feet, breaking his leg in a compound fracture, and also ribs where he landed. We rushed to his aid. "Kelly" was in almost unbearable pain. The femur of his leg was sticking out, and an artery was punctured. Blood was everywhere and was shooting out a foot or more. When we arrived, "Kelly" was screaming, "OH GOD, PLEASE HAVE MERCY, PLEASE DON'T LET ME DIE"! We administered first aid, got the bleeding stopped, and the ambulance took him away. He recovered, and, you know, I have never heard him say another word, not even a cuss word, or anything against God. Funny how people who deny God suddenly cry out to Him in crisis!

Finally, let's say for sake of argument, you are right. I am just going to die and rot away in a cold grave. BUT OTH, if I am right, God exists and I have accepted Him, then that Bible's words are true, and I will die and go to Heaven to be with Him. And you, having rejected Him and His Son's death on a cross, will spend forever in a place called Hell.

I know, I know, you don't believe that...no flames necessary. So, tell
me, if I try to live by that Book, accept that

Traditionally and historically, religion was invented and used as a
means to control the populous. Religion is quicky being replaced by
surveillance and weapons technology. For more info, read Plato's
Republic.

> > > 2. Says earth is 6000 years old

My major required physics and electromagnetics, and I took particle
theory for kicks. I do calculus for fun. Please try and go over my
head with your explanation.

> > > 3. Says "I AM THE TRUE RELIGION"...just like Catholics, Jews, Moslems,

>
>wrong again. Christianity is not a religion, it is a faith and a
>relationship. Jesus doesn't say that He is the "true religion." He says "I
>am the way, the truth and the life."

Just like Clinton's definition of sex, you can call it what you
want...

religion: 1. belief in God or gods to be worshiped, usually expressed
in conduct and ritual. 2. any specific system of belief, worship, etc.
3. any object of conscientious pursuit.

> > > 4. Is a minority religious text...LOTS more Bhuddists and Moslems.
>
>ding ding ding ding ding -- correct answer! Yes, we are a minority -- GIVE
>THE "MAN" A CIGAR!

Reality is not subject to a vote. Regardless, people will believe what
they want. http://www.the-void.dk/incident/intro.html

> > > 5. Is cynically manipulated by people who make $$ off it.
>

>Nope, you've been watching too many "tv preachers." Most of them I would
>not consider to be "Christians."

Everything good will eventually be abused. That's human nature.

> > > 6. Was written by MEN...not God<God doesnt exist..NO ONE has ever
>proven
> > > God's existence>
>
>Yes, men did the writing but God did the dictating. As far as wheter or not
>God exists, read the brain analogy above.

Extraordinary claims require extraordinary proof. The burden of proof
rests with the claimant. Absence of proof begs faith, since faith
requires only blind obedience. Read "The Golden Bough" by Frazer.

>My advice to "Mr. Christian Mythology" is to get his facts straight before
>he opens his mouth. It MIGHT add to his credibility.

Speak for yourself. You might also try speaking for yourself on a more
appropriate newsgroup.

every knee shall bow and confess Jesus as lord and savior,we will all meet
Jesus when when die, (to be absent of the body is to be present with the
lord),the only decision we have to make is
1, are we going to meet him as our loving lord and savior
2. or as judge and jury
I prefer the first, all JESUS said we had to do to have eternal life ,was to
except him as lord and savior, and repent of our sins, GOD bless cgl

Ok, let's try this for starters.

The "age" of a rock or whatever is determined by certain isotope ratios found in said rocks. Explain to me how you know without a doubt that the Uranium/Lead ratio or the Potassium/Argon ratio in a particular rock is was not there from the beginning and is not natural. Explain to me how a mammoth in northern Siberia (is there a southern Siberia?) can be dated (using Carbon-14) anywhere from 5000 to 14000 years old given different samples from the same animal. Explain to me how the same animal's stomach contents was dated to only 1500 years old using the same dating methods used to date the animal. Usually very wildly varying dates are determined when dating a sample. These dates are never published. If the dates don't fit the "preconceived" age of the sample they will not be published. Radiometric dating is FAR from flawless.

Also, what is "particle theory?" I know what particle physics is but what is particle theory?

Remember St. Thomas, he had to see to believe! Your words strike a
chord
I learned when in School (Catholic), when making a bet always bet on the
fact that there is a Supreme Being, because, if you are right, I have
still not lost anything but I suspect there is something out there, too
many miracles for chance happening. My faith is a deep and personal
thing, I can not describe God nor can I touch him but neither can I
touch Sunshine but feel its warmth.

Funny how our poster included Muslims as Anti-believers, they follow the
path of one true GOD and my Islamic Friends would be not be amused. The
BIBLE forms part of the their belif system.

JESU VIVAT!

I told you last time, dickhead. Solder the +12VDC line to the switch. Don't you see I got a "cb mods" site? I been showing people how to do this kind of stuff for years. If you can't follow my simple instructions that's your tough luck.

No! Go to Radio Shack and buy a 50 ohm
1/4 watt resistor. Solder this to the
#2 lug of the switch. Then run a piece
of wire from the metal (GND) part of the
switch to the +12VDC (red wire). The
resistor converts the frequency output
to the upper "channels".

Don't believe anyone else, no matter WHAT
they say. They are assholes forging posts.
Just follow my directions and you'll be
fine.

sparky@cet.com (Sparky) wrote:
>Read "The Golden Bough" by Frazer.

"ON SCAPEGOATS IN GENERAL"
James George Frazer��
(The Golden Bough.1922)

�THE FOREGOING survey of the custom of publicly expelling the accumulated evils of a village or town or country suggests a few general observations. ���

��In the first place, it will not be disputed that what I have called the immediate and the mediate expulsions of evil are identical in intention; in other words, that whether the evils are conceived of as invisible or as embodied in a material form, is a circumstance entirely subordinate to the main object of the ceremony, which is simply to effect a total clearance of all the ills that have been infesting a people. If any link were wanting to connect the two kinds of expulsion, it would be furnished by such a practice as that of sending the evils away in a litter or a boat. For here, on the one hand, the evils are invisible and intangible; and, on the other hand, there is a visible and tangible vehicle to convey them away. And a scapegoat is nothing more than such a vehicle. ���

��In the case of the modern age, the village may find its equivalent in the electronic news forum knows as the "newsgroup". When a newsgroup is beset by evil and strife it is commonly effective to expel a scapegoat, usually a personality that has proven himself to be silly, paranoid and acting the part of a circus clown. In ancient times such a scapegoat was thought to "have a twisted head" and this term was later shortened to the nomenclature "Twistedhed". Such a personage can be conveniently engaged as a tangible vessel for all the accumulated strife that has built up over the past year or two. In this manner all the varied ills that infest the newsgroup will be cleansed once the scapegoat has been expelled.

> --

Only antennas on an odd multiple of a quarter wave are resonant at about
50 ohms. One quarter and three quarter wave antennas are easy to match.
Any other feed point is a high impedance point and the power transferred
at that point will be lower. (Power transfer theorem, works with Ohm's Law.)

To match a 5/8 wave antenna, basically you are adding the additional length
electrically to the antenna so that you are feeding it a low impedance point.
These are the coils you see on a 5/8 wave. It can be one big loop, or many
small loops. The design of the matching circuit can make a big difference
in field strength. Some methods create more capacitance then other methods.
Capacitance means loss. Maybe Jay in the Mojave can give us more enlightenment.

Bill:

Even easier for the dipole:

2 pcs 8 feet long, and 2 pcs 3 feet long, such that the 3 foot pcs slide over the 8 ft pcs... TO tune, just slide each of the shorter pieces out or in the same amount... No cutting to tune.

This issue has been resolved to the point of exhaustion. There are
several ways this can be done initially. Radioactive elements and
their byproducts are different chemically, so the sample can be
verified by quanitative analysis of the byproducts from the resulting
chemical changes. Another method is by crystallography, where the
inert material is found in the crystalline structure of it's isotopic
predecessor. Isotopic ratios at the time of formation can also be
verified by comparison with samples where the age has been previously
established. Recent verification of the Carbon-14 process has been
made recently through a meteorlogical study. Tree rings and ice-core
samples were used to make a continuous record of weather patterns
every year for the past few hundred thousand years. The process works,
and it works well.

> Explain to me how a

>(using Carbon-14) anywhere from 5000 to 14000 years old given different
>samples from the same animal. Explain to me how the same animal's stomach
>contents was dated to only 1500 years old using the same dating methods used
>to date the animal. Usually very wildly varying dates are determined when
>dating a sample.

You need to reference your information. Regardless, if what you say is
true, and since I don't have any specifics, my first guess would be

mineral absorption, or, more specifically, petrification. This is a chemical process, the progression of which can be measured, and is always considered when using the Carbon-14 process. Mineral absorption can be verified by observing a linear progression of mineralization through a section of uniform permeability. I suspect the dates you mention were the "raw" data before any correction was made.

> These dates are never published.

If not, where did you get your information?

> If the dates don't fit
>the "preconceived" age of the sample they will not be published.

That's hogwash. All the sciences that use the process have had many suprises, and countless theories have been drowned when faced with the results.

>Radiometric dating is FAR from flawless.

Some of those failed theorists, in an attempt to save their work, choose to attack the process. "I can't be wrong, so the altimeter must be broken, and that mountain goat in the clouds is just a hallucination."

>Also, what is "particle theory?" I know what particle physics is but what
>is particle theory?

The same difference as nuclear theory and nuclear physics. Particle theory predicts, verifies, calculates, etc. the existance, action and behavior of nuclear and subnuclear particles. It is also significant factor in electromagnetics and quantum theory. I suggest you look at some college and university literature, as well as the references I noted previously.

Any further discussion on this topic should probably take place on another newsgroup.

Strangely appropriate, however misdirected it may be. The same chapter
discusses the use of a 'divine' scapegoat, and Jesus is probably the
best example. While his intent may have been to be the 'ultimate'
vessel to carry away the evils, the periodic nature of the expulsion
seems to have continued, manifested in it's celebration. You just
can't take the animal out of the man...

Martin,

Exactly. I didn't get to finish my post--my computer sent it before I meant to. Like I was saying. *Assuming* there is no God as the Troll says, if I die believing there is and there "ain't", then I have harmed no one by my beliefs. No harm done. BUT if there IS a God, and I truly believe there is, and I DON'T believe it and reject his Son as my Savior then I'm going to bust Hell wide open. So I have placed my faith in Him. "For if a man gain the whole world, and lose his own Soul...." remember that one.

I had one of the meters puke out like that on mine. Turned out to be the adjustment screw backed out a bit. BE VERY CAREFUL, it's a very sensitive adjustment, 1/4 turn is 100 times too much. GL

i just recently built the 1/4 ground plane on this page, works great!
i am gonna build the 5/8 vertical gain this week, maybe the
construction plans will answer some of your questions ...

4619. Need CB Radio recommendations for car

Newsgroup: rec.radio.cb
Date: 2001-04-17 02:27:02 UTC
From: usenet201@hotmail.com
Message-ID: <9bg9lm$qc8$1@news.netmar.com>
Source record: 79145

I am new to CB Radio. I will be traveling across country within the next two weeks and would like to limit my driving boredom and trying a new hobby. I was originally looking into a handheld unit. But I heard the range is horrible and an optional whip antenna is cumbersome. I would like to consider a mounted automotive unit. However I don't want to take apart my dash and car to install the unit and a fixed antenna. I am wondering if there is a unit that is easy to install, including antenna, that performs well. Something that I could just plug into the cigarette lighter with an external antenna that suctions to the roof and wires through the window. I would appreciate any advice.

>so just go to dejanews.com and do a search. Believe no one. Watch the
>headers and make up your own mind. Have a good day.

That's a very nice plea of justification, but then again, your sense
of justice is just as warped as your perception. Aren't you the one
that described the three steps on how to kill a car burgler? I think
"spray him with lead" were words you used. And didn't you brag about
how it's legal to shoot college kids that are just picking mushrooms
in the field? And weren't you just one of many that claimed to have
the "right" to break the law just because you choose to do so?

But now you want everyone else to believe that you have been wronged only because you exist. I don't suppose any law is going to help you, since your harrassers have the "right" to ignore those laws, and they "choose" to do what they do. Or maybe they just have thier own "interpretation" of the rules, interpretations that you don't like. Are you going to shoot everyone that doesn't agree with your own "interpretations"? Is that how you resolve your personal conflicts? By shooting anyone that says anything different?

I agree with you, Twisted, people should just go to dejanews.com and look up some of your comments over the past few months, and let them make up their own minds.

Sparky, FLCD

: I'm familiar with the process. I am also familiar that many proposed
: newsgroups fail for lack of votes. That's why I wanted to see just how
: much support there would be so I wouldn't be wasting my time. Although
: I am sure you are correct that a majority would use it, I don't see
: enough sincere interest to warrant the effort of creating and
: maintaining such a newsgroup. On the contrary, I am beginning to
: believe that there are many that actually enjoy this spamming war. Go
: figure. That's fine with me, I can think of better things to do.

It can be a problem starting such a group. If you look at the history of this newsgroup, you will probably find that there are far less than 50 regular posters. So you are correct, you probably would not get the minimum required number of votes.

KA3, that's all well and good, but some of us have severe cases of
paranoia. Hell, the hammies are always getting popped for one reason or
another. Now that the Feds want your SS# it is just one more reason not
to get involved in the big 'ol cluster**** they call ham radio. I have
friends that are hammies and they enjoy what they do. Some would rather
stay on the fringe where the excitement is. I have already received an
email suggesting that the true outaws will have bogus licences, much as
the way kids have fake ID's and of course, fake degrees. Think about it,
if this comes to pass, and you get pulled over for a radio inspection
and you have an illegal radio for cb, ya' wave that worthless piece of
paper and chances are a LEO is not going to wait for a relay check from
dispatch to verify the validity of such "license" when it is clear that
no other law was broken except maybe some "pain-in-the-ass-regulation
concerning cb rules that was delegated because the feds have no true
interest in enforcing what they created". ......and this was from a Fla.
State Patrol Officer. His words, " I'll be damned if I'm gonna babysit
the airways for some cber".
AND AGAIN!

Subject: Re: modification on frs radio
Newsgroups: rec.radio.cb
Date: 2000-08-18 19:16:40 PST
There will always be tinkerers modding radios to see what can be done.
And thats a good thing. And it bothers noone unless interference occurs.
Some just like to whine about legalities and are not the least concerned
with what they cry about, as long as they can play radio cop!

...Great posts! Now check out the headers. HAHA! Poor chickiehawk!

Except for stepping on my signal, interfering with my broadcast radio, TV and CATV reception (yes, cable), and sometimes my computer. As an electronics tech

"Sounds sort of like....a whine, no?
Here is a claim of him being "an electronics tech."

it always interferes with my work. And even the police department has had incidents where unfiltered linears trounced their comm. Then there are the idiots that chase you all over the spectrum trying to pick a fight "just because it's fun",

"Not unlike how you girls consistently have your nose in my behind. Y'all enjoy it. Pot, kettle , black."
"
and because they are under the mistaken idea that they can hide behind their microphone.

"much like you do behind your phony nics and addys?"

Maybe you don't do those things, but a lot of people do. I hope you are not defending their actions.

>> If they are going to try and drive me off the air by >> their illegal acts, I am going to try and drive them back >> with my legal acts. That includes the NGs.
>
>So what you're trying to say is because you were picked on >in grade school

"Classic Leland C. Scott, KC8LDO.. He has demonstrated consistently and quite arrogantly, not to mention ignoramously, his penchant for an attempt to change the subject whenever he is called on his erroneous, ridiculous and hilariously hysterical posts."

, you're going to get back at them on >someone else? Is that it?
Because someone offended you >elsewhere, you're gonna take it out on people here who fit >the same uh... "modeus operandi", if you will?

"LMAO. Hypocrite central."

"Some of you >posters' here
are brand new, what do you know of this >group?
If the newgroup archives went back far enough, you would find that I have been on the web for well over ten years,

"there is the bragging that shines through with the arrogance."

and in and out of this NG for a lot of that time under four different names (as my ISP changed).

"Again classic Leland C. Scott, Kc8LDO, your arrogance dictates the need to JUSTIFY and explain yourself to others as to WHY you have so many names. Leland has always demonstrated an acceptance problem...hence him balling up his flabby fists and jumping up and down shaking with rage, holding his breath, making threats and wrting checks his ass couldn't cash if one were to hold his hand. "

You should really think about what you say before you say it.
>If you haven't done
>anything wrong, then you must be in the clear.
"That is what I always say. Here. Try again..it's:

abuse@webtv.net abuse@webtv.net abuse@webtv.net

But if >you're going to come here and pose a "nuissance" to >everyone, then you might as well take the flames.
I'm glad you mentioned (but misspelled)

"Hmmm..not too long ago you said I picked on spelling and sentence structure when I had no point. Does that apply to you as well? Oh I see, you don't walk the talk. You like to be in control and Twisted took that away from you. So were you wrong, lying, or is it a forge? HYUK HYUK!"

nuisance. Why don't you spend a few minutes and look for the legal definition of that word. You might find a few court cases where illegal radio operators have been found guilty of causing a nuisance. When you

finish that, look for any cases where a poster on a newsgroup has been found guilty of the same.

"Very interesting. You may want to stamp this on your head and repeat it as a mantra along with "TWISTEDTWISTEDTWISTEDTWISTEDTWISTED...ahaha! But it was you that threatened me with a lawsuit not even a week ago. Two faced, liar, and troll. Classic Leland. Rules apply when they are advantageous to himself, but not when he is at a disadvantage.
Wow. Sounds like Leland C. Scott, KC8LDO, does it not?"

>>With the new law, legal operaters can help to clean
>> up the airwaves with simple DF equipment and a FS meter, >> and cooperation with their local law enforcement.
>
>Yes. I do agree with you here. But not to take it out on >people that do frequent this newsgroup and have to hear you >spew "the speed limit is 55 and you were doing 56. YOU >BROKE THE SPEED LIMIT THUS YOU VIOLATED MY RIGHTS AND I AM >GOING TO PLACE YOU UNDER CITIZENS ARREST, YOU CRIMINAL!!!!>AAAAAAAAAAAAAAAAAAHHHHHHHHRG!"
Assuming that this is your way of saying that the FCC regs are insignificant, then perhaps you should enlighten the readers as to what laws they should and should not obey.

"Again, classic Leland. Always worried about what other readers think. Always jockeying for that tiny bit of attention that stems from his rejection in childhood, except from uncle chickenhawk of course."

If you don't like a post, ignore it.

'H-Y-P

"P, as in porn posting Leland."

"O-C-R

"R, is for rejection, which is at the bane of Leans arrogance."

"I -T-E. HYPOCRITE. Hypocrite. Whenever we need a troll leand can be found,"
,
No one is making you read it. If you want to argue, that's fine too, it just keeps you off the air a bit longer. But it is impossible for me to ignore a jerk down the street with a 1KW penis-compensator. So as long as the illegal operators continue to whine about getting caught, I will continue to laugh.

"No one is whining except you and your gal pals. Just one more lie you asked me to point out. Would you like another, Lean? Ok. One more, and then you have to find your own lies, k?"

Sparky, ignoring the grade-school banter.

"What happened? Arrogance get the best of you? And Just like Leland, KC8LDO, you BOTH, TWICE, said you were ignoring everything..within the

past week. AND YET STILL ANOTHER COINCIDENCE. Safe to resume your bonafide, tried, true, tested, blue, tag as a liar. One more before I go, and just like Leland, you nailed yourself with your own hairlipped words. HAHAHA"

Now we move on to the adventures of Leland in Drag as Voobie. Also of special note, it should be of proper merit to mention our finnish funny guy Kari. See, he maintains his innocence, but again, like his fellow pathologicals, he added to these posts with his own little smart remarks. Check it out and see, he is very chummy with Spark, Voob, Leaan, and Dogie.

AHHHhh, they have been, m dear chickiehawk, they have been. My mailbox was jammed this AM. Added much more to trash box. Kari, here is your name in with that crowd again. Care to elaborate?

"Mr. Aaron H. Voobner" <aaronvoobner@my-deja.com> wrote in message news:93ih6v$et7$1@nnrp1.deja.com...
> You once stated that you approved of dissenters to the > illegal focus of rec.radio.cb - but only if they are not > disruptive, and make their opinions known respectfully. > (Which I think is outrageous, pure BS)

That is exactly what makes you a troll. You admit that you are deliberately disruptive and disrespectful, hence YOU ARE A TROLL by canonical definition. I will be referring to this stated intent to disrupt and disrespect the group throughout this post.
> You named Professor and SPARKY as examples of
> well-behaved legal CBers. But when Sparky didn't conform > to your point of view, you decided he needed some slapping > around to keep him in line.
NEVER have I mentioned Professor in ANY of my posts. Again you have shown your tendency to LIE. How many does this make now?
Sparky STILL has not proven me wrong in my example of NON-TROLLING pro-legal CBers, and at no time did I "slap him around" or "keep him in line", as I so often do with you. Sparky showed needless disrespect in a thread by dismissing
without cause what I had said, and I showed it back. Your deliberate mischaracterization is typical of a troll's tactics.

> Your "contribution" to this NG seems to be that of thug > and enforcer.
How so? Because I continue working you over in a flamewar you started? Because I oppose your deliberate disruption of a group I like to read? Because I call you on every lie you attempt to put forth? Because I don't like trolls? What have I enforced other than the constitutional rights of others which you had ignored? To whom (other than YOU) have I been a "thug"?

> >Simply put, it's *obvious* you have a grudge against CB,
> Your saying so doesn't make it true.
Right. Your stated commitment to DISRUPTING A CB GROUP makes it true.

> The "group" inexplicably uses the same arguments for being > illegal as they accuse me of using *against* them.

"Classic Lean. Hem hee, haw, when all else fails, obfuscate."

Even > YOU can see that.
The group is not illegal. The "group" also does not seek to disrupt itself, YOU DO. That's why I continue to correctly call you a lying troll and you prove it yourself time and time again.

> There are plenty of legal CBers here who do not support > your point of view.
Name them. I don't think ANYBODY supports your stated intent to disrupt and disrespect the group, other than perhaps N8WWM.

> >Other than N8WWM, I have seen NOBODY
> >openly support your trolling.
>
> That's because I'm not trolling.
I'm sorry, but you ARE a troll by deliberately disrupting this group, and ONLY N8WWM joins you in doing so. You HAVE stated your respect for him because he also claims to be against "illegal CBers" and shows it by flood-posting, disruption and disrespect, even though fellow hams have unanimously spoken against him and he has been repeatedly kicked from ISPs for abusing usenet.
> The posts of Fred, Sparky, QRM2000,
> Kari and others support the same ideas I do.

"TAaaaaa daaaaaaaaaa! Those names again. And why isn't lean's name present? Because chickiehawk is author of said post."

Classic Leland. Watch the manipulation take place. Same slant he tried in the hammie forum when he mistakenly intentionally, and arrogantly attributed a post to me that HE forged himself.

Aren't you the one that described the three steps on how to kill a car burgler?

"Nope. Where did that come from? Please cite your reference Lia, er, lean."

I think "spray him with lead" were words you used.

"No. Get it right. And once again your ignorance in attribution is so proudly displayed."

And didn't you brag

"No. You made, as usual, an ignorant, uninformed comment about how it is illegal to shoot trespassers in every state in the country. My reply is below. Sorry to see your comprehension is also compromised. Now that I see this post, I have been slapping you around much longer than I ever knew Leland...hahahah! No wonder you're so pissed. LMAO!"

about how it's legal to shoot college kids that are just picking mushrooms in the field? And weren't you just one of many that claimed to have the "right" to break the law just because you choose to do so?

"No. How may more examples you want of you lying? I have hundreds."

<twistedhed@webtv.net> wrote in message news:17962-3A37846F-11@storefull-123.iap.bryant.webtv.net...

I'm sure that you can make a 5/8 wave antenna and that it will
work. If that's what you want to do, then I'd say 'go for it!'. I
doubt if it's performance will be significantly different from the
commercially made ones, though.

> in field strength. Some methods create more capacitance then other methods.
> Capacitance means loss. Maybe Jay in the Mojave can give us more enlightenment.

1. 1/4 wave verticals with radials has a low impedance
input, typically around 20-40 ohms.

2. For odd multiples of a 1/4 wave, see above.

3. Capacitive coupling has less loss than inductive coupling,
assuming that both coupling devices are designed correctly.
In either case, the 'loss' is less than if neither type of
coupling is used.

4. Your right, Jay probably can.

You'll be amazed; the criminally-minded think of themselves as "high-end CBers"... Sleep tight, I'll getback to you tomorrow - local time, that is....
P.S. How long can they go on planning their clearly criminal activities? Hmmm.
zzzzzzzzzzz... Gary

Damage. Who have dey damaged, other than wimps >that get too close?
Dave!
The definition of a crime is a violation of the law. "Damage" is
something which a victim can seek a remedy for. In a local civil case, a
lady successfully sued her neighbor for causing a nuisance with his
illegal CB equipment. There was criminal conduct resulting in damages.
Sparky, FLCD

"Here is another lie you told. You asked for one, oh just one lie,
please please please. I gave you a half dozen . Here is one more since I
am being so generous. I called you on the lie you made above. That never
happened. You made the claim, prove I am wrong...hahahahahahahha Lie
boy! You can't. You ignore it just as you did when I called you on it
the first time. I try to tell you girls your lies nail you everytime.
Now run away Sparky girl and come back when you think everyone has
forgotten your self emabarrassment. I'll still be here."

From: Pappy@naut.net
Message-ID: <3ADC6D81.81DDD7DC@naut.net>
Source record: 78985

Check this out Sparky. Here is a perfect example why we need a moderated group. Not the fact the alleged illegal items being sold on ebay, but the filthy language. There are most likely people backing you than posted to your inquiry for fear of being slammed by the people opposing the proposed new moderated group.

4660. Re: Thank You sir may I have another? Sure Twisted

Newsgroup: rec.radio.cb
Date: 2001-04-17 16:25:44 UTC
From: "Leland C. Scott" <no-spam@junk-mail.net>
Message-ID: <tdorkbspj95lc1@corp.supernews.com>
Source record: 78986

You never answered the question about if your a convicted sex offender. As often as I see it mentioned I am beginning to wonder about it. It would easy for you to clear that up by just posting your real name and address Twisted. That way various sources can be consulted since most if not all states maintain lists of know sex offenders. Then let the good people on the news group judge if your telling the truth or not. 8-))

If you don't provide the above information then one could reasonably assume there is some element of truth to the allegation, right? Heck everyone on this news group knows my real name and address by just consulting with QRZ. It hasn't hurt me any in the least that my name and address is public. If your innocence then you have nothing to hide either, or do you?

4664. another interesting SWR problem

Newsgroup: rec.radio.cb
Date: 2001-04-17 17:16:15 UTC
From: Mike Bleiweiss <mbleiweiss@laurelholdings.com>
Message-ID: <tdoupom6pj1786@corp.supernews.com>
Source record: 79159

Here's another one. I took my antenna off the mast and mounted it just below my attic window, using the same method I used on the last mounting which gave me an SWR of 1.2. Now that I moved it, my swr is back into the 2.5 - 2.9 region. The only difference is, the coax cable comes from the bottom of the A99 antenna, and slopes about an 80 degree angle upwards towards my attic window, to my shack in the attic. So, the coax is basically almost running parallel upwards alongside the antenna, to the radio which is in the attic about 5' above the antenna. Is this what is causing the problem?

Thanks in advance for any help.

Mike

First of all, this racial bullshit doesn't belong here, I don't care what group is being singled out. Last time I checked I was on rec.radio.cb. Isn't this supposed to be about radios?
Second of all, alot of the information in the article/tirade is bullshit. As someone who lived in Santee for many years and just recently moved away from there, I can tell you most of the "facts" and I use that term very loosely, are wrong. If the mayor of the fine town of Santee believes the town is 82% white, it is because that is the make-up of his country club not the town. The only possible way Santee could be 82% white is if everyone that has 25% white blood in them is considered white. Santee is a very diverse community like San Diego County in general.
Wow, can you believe that more whites have used crank than there are blacks that smoke cigarettes? Could that possibly have anything to do with the fact that the country is only 10-15% black and therefore whites greatly outnumber blacks?
If you want to get into some statistics deep enough, you can twist them to show just about anything. I can dig up some statistics to show that Russians are stupid as compared to Koreans or Germans have bigger brains than Finns but unless you look at the WHOLE picture, they wouldn't mean a thing.
ICE COLD, keep the jokes coming. They are funny and I enjoy them. Leave the racial shit where it belongs, flushed down the toilet with the rest of the shit.
Now let's get back to talking about radios.

We don't obey IP rules against spamming, porn, and forging ...because we don't agree with them. And that is OUR GOD GIVEN RIGHT.

We think the IP rules are *trivial* and need not be obeyed.

Look all over the net. NO ONE cares about enforcing these rules. And even if they did, we would never get caught.

These IP rules are a JOKE! And you people who complain about US BREAKING RULES have nothing better to do than go around ratting out others.

Haven't any of you ever jaywalked or gone 35 mph in a 45mph zone? Probably have. Yet you holier than thou IP NAZIS point the finger at us.

It is our RIGHT to break these IP rules. After all, if we are caught it is we who will pay the price. Why are you sticking your nose in OUR business?

We know what we do is "against IP rules". So SHUT UP ALREADY. We don't need to hear it again and again. You made your point now go away!

The WHINERS who just like to cry about rules being broken will only be happy when ALL our freedoms taken away!!!!!

>
> kev.

Hey Kevin,

I've had a 1/4 wave GP up for about 4 years now and it worked great even though the counterpoise radials weren't made "as described" in the book. I also tried the "fishing pole ear" which didn't work at all when built to the instructions. I downloaded a couple of old DOS antenna coil calculation programs and experimented until I wound just the right combination for a 4 foot coil and "stinger". Stuck it up in the attic and it works pretty good. Be sure and post how the "5/8 vertical gain" antenna works when you get it done. I can't find the tubing I need to make the pieces fit inside one another. Arrrrghh.. I'm trying to hold out against using the ol' hose clamps.. Good luck!

Very good point.

> I hope this helps.

Sure does. If I can't find tubing with the right inside and outside diameter to telescope for the 5/8 (or 3/4 even), I'll probably go ahead with the 1/2 wave dipole. BTW, excellent FAQ! Thanks for the information!

4695. Cobra 2000 Audio Problem

Newsgroup: rec.radio.cb
Date: 2001-04-17 19:08:51 UTC
From: Johnny2114@aol.com
Message-ID: <rVZC6.220$Un6.176659581@news.netcarrier.net>
Source record: 78982

I recently lost my audio on both the speakers and the head phone jack. The meter is showing an incomming siginal, and I am able to transmit. If you put your ear right up to the speaker you can hear transmissions but I am unable to adjust the volume. I tried to replace the volume turnpot with no sucess. Anybody have any idea what snapped and how I can go about repairing it? Feel free to email me..Thanks!!

Interesting site.. That's neat how you used the cross-shaped copper sheeting
to adjust the dipole and support the top section! I'd like to try making the
antenna matcher (LONG WIRE!), and a good antenna book is looking like a very
important thing to have. Thanks for the info!

I'm definitely looking for the best compromise between easy/robust
construction and least loss. Since I can't use the plan in the book (because
it's going to be on a 36' mast, not on a 6' piece of 4x4 as specified), I'm
stuck making changes without understanding the whys and hows (which sucks).
So far I'm not sure about the 5/8, but at least I can re-use the tubing from
a 1/2 dipole when I get my head around the theory. Thanks for the breakdown!

Have you checked the RX wire in your mic? Had the same problem on a 148gtl and
it was the RX wire on the mic plug that came loose. Hope this helps. Good luck.

> basically almost running parallel upwards alongside the antenna, to the
> radio which is in the attic about 5' above the antenna. Is this what is
> causing the problem?

That would be a good bet to start. Anything that is conductive that is
"near" the antenna becomes a "significant" part of the antenna "system".
When we speak about "near" we mean in the "near field" of the antenna, which
you could consider to be about one wave length, or about 30 feet for 11m.
When the geometry of the antenna changes it is not unexpected to have the
feed point impedance change too, thus a change in SWR. The shield of your
coax is conductive and could be coupling to the antenna proper. Also
currents induced on the outside of the coax shield can be screwing with your
SWR measurements. I had that problem myself with a 6m mobile antenna until I
fixed it. Finally is the wall the antenna mounted close to Aluminum sided?
If it is that will be a problem.

You sir may I have another? Sure Twisted

Group: rec.radio.cb Date: Tue, Apr 17, 2001, 12:25pm From:
no-spam@junk-mail.net (Leland C. Scott)
You never answered the question about if your a convicted sex offender.
As often as I see it

"Well we already know how much you value the source now don't we?"

mentioned I am beginning to wonder

"Your arrogance blinds you in to actually thinking I care what you care.
Nothing could be further from the truth."

about it. It would easy for you to clear that up by just posting your
real name and address Twisted. That way various sources can be consulted
since most if not all states maintain lists of know sex offenders. Then
let the good people on the news group

"You worry about the people on the ng. That is your arrogance. I care
what no one thinks."

judge if your telling the truth or not. 8-))
If you don't provide the above information then one could reasonably
assume there is some element of truth to the allegation, right? Heck
everyone on this news group

"We already know how you are Lean."

knows my real name and address by just consulting with QRZ. It hasn't
hurt me any in the least that my name and address is public. If your
innocence then you have nothing to hide either, or do you?

"One more time since you have that comprehension problem. I do not care
if you accuse me of having sex with your mother...it doesn't matter to
me what you believe, and your ego does not allow you to grasp or handle
the fact that I simply do not care what you or anyone else thinks."

If you read it closer, you will see that the statistics ARE distorted in the forwarded post by Cold. The numbers are stated for a 50/50 population. While this proportion could happen in some areas, in most cases the numbers are more spread out, with a larger percentage of non-blacks in any given place.

I didn't think it was a racial post. It was entertaining in the fact that the numbers were glaringly wrong. To be fair, more sh!t has been done to me by whites. Of course, I have spent more time around whites, so whites had more opportunities to do so. As a repairman, I have been asked if a certain brand or model has more failures then others. My response is that brand X has sold so many of model Y that of course I see a lot of them. It just shows how popular that model is. There is power in numbers.

Hi Mike
You say that you took the antenna off the mast. The mast acts as a ground plane and can mess up the SWR. Try running a ground wire from the base of the antenna to a 4 to 6 foot copper ground spike and see if that helps. Make sure that the antenna is clear of all obstructions by at least 10 to 30 feet, (i.e.. siding, coax, power lines and roofing materials). Remember that the bottom of the antenna radiates more then the top on an A99 so keep the bottom clear and away from the house. Try cleaning all the joints on the antenna with emery paper this includes the coax connector to be sure of a good connection. Last take an ohm meter and check to see if the coax is faulty. It sounds like the antenna is radiating but you have some reflected power.
Good luck

Below we find the three chickies huddled together, as usual, clucking happily. But Kari has nothing to do with them, remember, he said so, so it must be true. As usual, Lean posts a phony message appearing as an innocent newbie. Problem is, the email is phony (as usually is by Lean KC8LDO, or Dogie N8WWM). Then, Lean's arrogance and ego comes into play. She must stroke herself, feed her ego carefully, so she answers her own post in a poor attempt to impress the ng, remember, her arrogance dictates that she revere what the ng thinks, an obsessive compulsory, if you would. And what cheerfully folllows is the usual trash spewed by the whoresome foursome of Dogie, Lean, Kari, and (ahem) SPAR' KEY! What a coincidence. Oh. And we have Kari with a hotmail address below. Wonder why she needed all those addys? Just when N8wwm pops up in the group with a hotmail account? What a coincidence. But she is innocent 'cause she said so.

If your neighbor is unwilling to voluntarily cooperate, there are a few
things you can do.
First, log all incidents caused by his operation. Log the time, date,
description of the incident, and how it affected you.
Second, notify the FCC and the local law enforcement and send them a
copy of your log, CC'd to your neighbor. Continue logging.
If the operator is still unwilling to cooperate, you need to talk with
an attorney, because you may have local and state laws which say that
your neighbor is causing and maintaining a public nuisance. If so, not
only can the courts force him to abate that nuisance, you could also
receive compensation for damages. But always talk to an attorney first.

What? You didn't write it? Must be that new language used in headers
that only you seem to understand, you know, where you translate it to
mean that I am in some sort of conspiricy just because someone you
don't like responded to my post.

It's sure interesting how you didn't quote my post in your reply this
time.

> Where is that town that
>prosecuted the woman? You did say that. And you did ask me to point out

I haven't until recently. Besides, where's the lie?

>"
> and because they are under the mistaken idea that they can hide behind
>their microphone.
>
>"much like you do behind your phony nics and addys?"

Nothing phony about my "nic", I've had it for many years. My ISP isn't
phoney either, but you seem to be too lazy to verify that fact. So
where's the lie?

>Maybe you don't do those things, but a lot of people do. I hope you are
>not defending their actions.
>>> If they are going to try and drive me off the air by >> their illegal
>acts, I am going to try and drive them back >> with my legal acts. That

>quite arrogantly, not to mention ignoramously, his penchant for an
>attempt to change the subject whenever he is called on his erroneous,
>ridiculous and hilariously hysterical posts."

That might be a fair assessment if it was Leland who wrote it. I have
mentioned before that all anyone has to do is email me for my name and
address, or they can look it up on a search engine. Is that too
difficult? Apparently. So where's the lie?

>, you're going to get back at them on >someone else? Is that it?
>Because someone offended you >elsewhere, you're gonna take it out on
>people here who fit >the same uh... "modeus operandi", if you will?

>
> "LMAO. Hypocrite central."

Now you are lost. ONE37 wrote that, or don't you know what the quotes
(>) are for? Again, where's the lie?

>"Some of you >posters' here
> are brand new, what do you know of this >group?
>If the newgroup archives went back far enough, you would find that I
>have been on the web for well over ten years,
>
>"there is the bragging that shines through with the arrogance."

.... where's the lie?

>and in and out of this NG for a lot of that time under four different
>names (as my ISP changed).
>
>
>"Again classic Leland C. Scott, Kc8LDO, your arrogance dictates the need
>to JUSTIFY and explain yourself to others as to WHY you have so many
>names.

And your ignorance won't let you read the part where I have changed
the name I have used on the internet. It wasn't arrogance that
prompted my reply, it was the accusation of being a "newbie", but your
ignorance blinded you to that, too.

So where's the lie?

> Leland has always demonstrated an acceptance problem...hence him
>balling up his flabby fists and jumping up and down shaking with rage,
>holding his breath, making threats and wrting checks his ass couldn't
>cash if one were to hold his hand. "

That might be Leland's problem, not mine.

>
>You should really think about what you say before you say it.

It only controls your speaker volume and has nothing whatsoever to do with the transmitted power level.

only works on Receive not Transmit. If your radio is equipped with a
Mike Gain or a DynaMike control the that will be your volume control
on transmit.

Anyone one know if there is any stores stocking this part??? I need 5 (part number = 1007).

Anyone knows if HC Valzah is still in business.

I heard he bought the whole inventory from Antenna Specialist 10 years ago ???
I bought some parts for a Sigma 5/8 from him 10 years ago.

The phone number I have for Valzah is disconnected ??

Thanks

You will transmit the same whether the volume control is way up or is set real low.
That only has to do with your receive not what others hear.
But behave don't just key up when you can not hear whats going on.
http://www.stringsobsession.com
Seems a bit calmer latly.

You really need to shut off you webtv, get your fat ass out of that chair, and go putt your boat around the bay a few times to clear your head. You don't understand half of what you are talking about anymore, and although you are not my most favorite individual in this ng, you are really going off the deep end. I have browsed a few of your posts from the past year, and it seems that you are not only proud of freebanding, dog-beating, and drug use, you actually enjoy it. Perhaps you were mentally ill before all this, but now you are a raving lunatic. Let it go before your family and friends (if you have any left) lock you up in a rubber room. Just shut the damn thing off for awhile.

> Excuse me, "Scott" you too have a hotmail address, does that make you a
> "troll" too? The guy was trying to ask decent questions

The "best" radio is the one that does the job the user wants. There
are several things to consider. Some features are required and others
are toys that make your radio hard to understand (echo/voice changer),
or annoying (loud or multi-toned roger beeps). Some folks like radios
with tone controls, I prefer sideband units. There is no set answer
to that question. A $20 dollar radio on a good antenna will always
outperform a $400 dollar radio on a coat hanger antenna. A clean
signal will be understood better then an overmodulated one.

Now then,

When one is posting an email address on a public forum, one should
never use an address that is directly downloaded to your computer.
(like POP or IMAP)

Hotmail provides that layer of isolation between the bozos and my
PC. Spam is easily deleted and all attachments are checked for problems.
Viruses have been sent to me, none have ever had a chance to infect.

In effect, Hotmail is my email P.O. box. Now that you have posted,
you will start to receive spam. The spambots cruise the NG's and
compile lists of email addresses. These are feed to 'puters that
flood the internet with junque email and free porn offers.

Now _YOU_ know...the rest of the story.

"Did you really think we want those laws observed? said Dr. Ferris.
We WANT them to be broken. You'd better get it straight that it's
not a bunch of boy scouts you're up against.... We're after power
and we mean it .... There's no way to rule innocent men. The only
power any government has is the power to crack down on criminals.
Well, when there aren't enough criminals one MAKES them. One
declares so many things to be a crime that it becomes impossible
for men to live without breaking laws. Who wants a nation of law
abiding citizens? What's there in that for anyone? But just pass
the kind of laws that can neither be observed nor enforced or
objectively interpreted--and you create a nation of law-breakers--
and then you cash in on guilt. Now that's the system Mr. Reardon,
that's the game, and once you understand it, you'll be much easier
to deal with." --Ayn Randrad

> You say that you took the antenna off the mast. The mast acts as a
ground
> plane and can mess up the SWR.

When it was on the mast I had it completely insulated from the mast. I used nylon guy wires, and the bottom of the mast was PVC. So the antenna never really had a ground before - but it still got 1.2 swr.

> Try running a ground wire from the base of
> the antenna to a 4 to 6 foot copper ground spike and see if that helps.

I'll try that... but the antenna is about 10' off the ground. Would the ground wire be too long?

> Make
> sure that the antenna is clear of all obstructions by at least 10 to 30
> feet, (i.e.. siding, coax, power lines and roofing materials).

It's about 6' from the house, which has aluminum siding. Also, the coax runs up the siding.

> Remember that
> the bottom of the antenna radiates more then the top on an A99 so keep the
> bottom clear and away from the house.

Bottom of the antenna mounts on the metal rail that goes around the deck. (its insulated from the rail, though)
Woo hoo, I'm batting a thousand with these "don't do's". :)

> Last take an ohm meter and check to see if the coax is
> faulty. It sounds like the antenna is radiating but you have some
reflected
> power.

Coax is good. I should just take the whole thing and put it on the roof.

Law enforcement here in Texas takes a somewhat more liberal approach to trespassing and endangerment. After dark, if you feel that you or your property is threatened, deadly force is legal. You might not agree with it, but that's the way it is here. Example: about a year ago a guy in Dallas was rumaging a trash can behind a fence in an alley late at night. The homeowner picked him off from his bedroom window on the second floor. Dropped the bum with one shot. Grand jury did not send a bill, and never would under similar circumstances. I found out who had been TP'ing my house (ain't it grand to have teenagers!) and explained that it wasn't fun any more to clean up. Also explained that if I found them doing this again, the 12 gauge would be pressed into service. In Texas there is no requirement to ask for ages first. If the residence is being vandalized, they are fair game. Haven't had the yard trashed again.

Source record: 79354

If it was, it's not any more. When this thread was going the first time I verified this with many states, including Texas, California, and Florida. Yes, you have the right to protect you family and property, but nobody has the right to use deadly force unless death or serious injury is imminent.

"Show your ignorance some more why don't you? For all your armchair lawyering, you know jack. If someone bothers to scale my fence, hop the wall, and trespass where the signs indicate otherwise and places his body in one of my out buildings or barns, reasonable suspicion is given he is ripping me off (read: MY PROPERTY), for which one may use deadly force. So cluck some more about what you know nothing of. "

That hardly defines a car burgler, or kids out picking mushrooms in a field, and that does not include property. There is no law that allows the use of deadly force for trespassing except where such trespassing will cause (not 'may cause') death or serious injury.

"Wrong, pal. Property protection in the state of Florida is allowed with the use of deadly force."

These laws have been upheld in the US Superior Court time and time again, and that is the best place to search for info on the subject.

"Wrong again. We have a great record in the 'pile of similar cases not even coming close to making it to Federal court. Why? Because they are ruled justfiable and never make it past the local jurisdictions. Case closed. You yankees always seem to know evreything about the south, especally the ones that have never been here."

Sparky, FLCD....professional liar, dress wearer, chickenhawk, impostor, perved mind, and troll.

HAhah! Because you have a comprehension problem I am busted? Don't think so chickiehawk. Judging by my mail box and the amount of folks that have forwarded your dribble to the proper authorties, I can make a safe prediction that you are in a heap of hot water, son. All your crying about rules. The laughter you hear is directed at you for being such a fool and going from annoying to criminal. Now that was funny, watching you self destruct. So ate up with your inability to be accepted, we watched your lack of control get the better of you day by day until you could take the fits of laughter no longer and ou just went over the edge...hahahahah! So carry on, junior, and keep on doing what you do best. Surprised your wanna-be-lawyer didn't point this out to you, fool.

Conspiracy Team:
Leland C. Scott KC8LDO, , many aliases, many lies, runs when asked why he lied or forged.

Dogie N8wwm -self explanatory

Kari-funny Finish guy: "I have absolutely nothing to do with them, NOTHING!" So he claimed. Then we see a post showing him taunting Tim, telling him he forwarded a post of his to authorities. This coupled with the repeated pairing of the names "Kari, Doug, Leland, and Sparky" by their own mouths in their own posts! HAhahahahahahha! Only they aren't lying, right Kari? How about that lady that sued and won,ch, er , Spark? Have you scoured the net and found anything to support your big fat lie? No? Didn't think so. Seems to me you girls "bust" your own selves just fine. Just sit back and let your arrogance and stupidity take control, y'all always screw up. So what town this take place in Spark? Thats ok. We all understand why you attack me with each post instead of answering the question. Same reason Leland can't explain his lying about me posting in a hammie room and the same reason Kari can't explain why his name is always present in the same line with you losers.

Group: rec.radio.cb Date: Wed, Apr 18, 2001, 3:22am (EDT+4) From: sparky@cet.com (Sparky)
You really need to shut off you webtv, get your fat ass out of that chair, and go putt your boat around the bay a few times to clear your head. You don't understand half of what you are talking about anymore, and although you are not my most favorite individual in this ng, you are really going off the deep end. I have browsed a few of your posts from the past year, and it seems that you are not only proud of freebanding, dog-beating, and drug use, you actually enjoy it. Perhaps you were mentally ill before all this, but now you are a raving lunatic. Let it go before your family and friends (if you have any left) lock you up in a rubber room. Just shut the damn thing off for awhile.
Sparky, FLCD

You need to worry about yourself and not concern your trolling self with other's business. Sorry, chickiehawk. You are arrogantly again assuming I give one iota of care about what you think. Stop deluding yourself. If you can't handle the truth, or answering for your screwups, maybe it is you that should go away. Shut yours off son. I am going nowhere. So unless you have something constructive instead of attacking me every single time I make a fool of you because of your inability to answer your own lies, I suggest you ease up on the caffeine. You are beginning to appear uneasy and anxious.

Your so busy chasing your imaginary physiological phantasms that you neglected to noticed the growing criticism toward you from you former compatriots. Nobody cares about who is stomping on your tail. The simple question was put to you however- Are you a convicted sex offender? You have been afforded many opportunities to exonerate yourself by simply providing your real name and address. A quick and simple check with local law enforcement is all that is necessary once that information is in hand. I have nothing to hide, but you seem to. Nobody on this news groups cares whose spoofing you except yourself. What really interest people is useful information, like one views on the evening television news, such as if their neighborhood is home to a known sex offender. You silence is the best prosecution witness against you at this point. So are you going to do the right thing, or once again avoid answering a direct question?

>My joke supply is getting low.

Two men and a woman have applied to the CIA to become assassins. They have completed all the other tests and screenings when they are brought into a room with three doors.

"Each of you will find a person handcuffed to a chair in the room you are assigned. You will hae passed the test when you shoot the person in that chair." the examiner tells them.

The examiner hands a 9MM to the first man and he opens the door. He's astonished to find his wife cuffed and gagged. He goes in and closes the door, but comes out 10 minutes later a ball of tears.. "I can't do it...I just can't do it".

The examiner takes the weapon from him and hands it to the second man. He too opens his door to find his wife also bound and gagged. He too comes out 10 minutes later, unable to pull the trigger.

The examiner dismisses him and hands the weapon to the woman. She opens her door to find her husband bound and gagged. She walks in and closes the door. Seconds later a shot rings out, followed by a second, and then the sounds of a scuffle. The scuffling stops, and she walks out, clothes torn and hair messed, but smiling.

"Some idiot put blanks in that gun, but I beat him to death with the chair...!"

UPDATE!!!

USA: KSMR Disappears
By Hans Johnson, Cumbre DX, and Nick Grace C., Clandestine Radio Watch
Clandestine Radio Watch 65 Extra, March 24, 2001

[Mar 24] After weeks of broadcasting, KSMR - Kentucky State Militia (KSM) Radio - disappeared on March 21st.

Although the reason for the disappearance cannot be confirmed, CDX- CRW received a report that the KSM ordered an immediate end to the station`s transmissions earlier this week. The KSM, however, did not respond to a inquiry asking them to confirm or deny this report.

CDX-CRW have also learned that the operator of KSMR, 'Major' Steve Anderson, may possibly return to the air with a new station. This operation may be a militia-supported station, but may have a different callsign and fewer, if any, ties to the KSM.

  You need to worry about yourself and not concern your trolling self with other's business.
You made it my business, Twisted.

"Wrong. You stuck your nose into someone elses business. I mentioned you not once until you interefered and began taking sides of the porn posting posse."

And why don't you take your own advice and worry about yourself instead of anybody else in this ng?

"I do. Every time you girls come at me, you want I should roll over and go away. Maybe you ought to, once again, worry about yourself and not others."

  Sorry, chickiehawk. You are arrogantly again assuming I give one iota of care about what you think.

If you didn't care you wouldn't be responding.

"Y'all share a comprehension problem. Inbreeding? Whatever. I reply at my convenience. Y'all are ate up with it all, posting 'round the clock..."twistie watch".....hahahah! So do tell, Sparky."

You are only assuming that my attitude is arrogant.
Stop deluding
yourself. If you can't handle the truth, or answering for your screwups, maybe it is you that should go away.
Truth? The truth is that I'm not Leland, and I am not in any conspirisy with

"Yea , yae, we know. Just like Kari denied having anything to do with you guys, but your names are used in the same sentence many times by who, Sparky? Who is that? Why, it's the same person y'all put so much belief in what he says. That and your trolls are always together."

anyone else against anyone. You did this all by your little lonesome.
The only one you can blame is yourself,

"Thanks for demonstrating YOUR ignorance of the subject. Only I don't think it's ignorance on your behalf. I believe it is malice with intent on you, Leland, and our soon to be famous wonderhawk's behalf."

but I guess that's too much truth for you to swallow. Screwups? Where? You kept saying that I lied, but you haven't found one yet. Where's the lie, Twisted?
Shut yours off son.
I'm not your son.

"Nope, you aren't. My son would have better manners and wouldn't have as many misfiring neurons as you."

I am going
nowhere. So unless you have something constructive instead of attacking me every single time I make a fool of you because of your inability to answer your own lies, I suggest you ease up on the caffeine. You are beginning to appear uneasy and anxious.
You are making a fool of yourself all the time. Once again I ask: Where are the lies?

"I showed you many. You too, also intentionally and incorrectly attributed forges as authentic posts. You claimed a case in Wash that you cannot prove. Another lie. you stated you have nothing to do with these clowns, you lied. Or, did the guy posting as Punisha lie when he refers to all you in one sentence repeatedly? You were all in on a game and were caught, and now, like little children, you deny it all. even when confronted with evidence of your own makings, eh clown punisha?"

Sparky, FLCD

>the yard trashed again.

Chapter 9 of the Texas penal code gives the conditions where deadly
force is justifiable, and there are some occasions where protection of
property is a defense. But you are forgetting that there is also case
law to look at. Since Chapter 9 doesn't excuse anyone from civil
liability, you need to go browse the dockets. Nor does Chapter 9
exclude anyone from criminal charges resulting from reckless use of
deadly force. This is why you can't find anyone that mounted a
successful defense for the use of deadly force just for trespassing.
Search for yourself.

That's a reasonable alternative to buckshot, I would think.

We have been hearing a lot about this "mailbox" of yours, Twist. You claim you have a lot of support and a lot of sympathizers. Can you name three people who support you? How about one? Just post one name of a person who supports you, OK?

While I may not support Twistedhed as much
as others, I surely don't support the three poeple
that are playing this game.
It's not enough that you three have come
here with a vigilante attitude, but this multiple
posting of vile, vulgar pornography is abhorrent.
Yes people do illegal things, yes they could
face fines and such, but that is the duties of the
sworn government officials to which they are
assigned, NOT VIGILANTES!
I don't mind the bickering, even an occasional
raw post, but when you are so low as to cower
behind forged identities..........Well so be it.
Then when you post Vile, Vulgar, obscene,
harassing posts, well it should be noted that those
post can be forwarded complete with headers
to said ISP.

You made it my business, Twisted. And why don't you take your own
advice and worry about yourself instead of anybody else in this ng?

> Sorry, chickiehawk. You are arrogantly again
>assuming I give one iota of care about what you think.

If you didn't care you wouldn't be responding. You are only assuming
that my attitude is arrogant.

> Stop deluding
>yourself. If you can't handle the truth, or answering for your screwups,
>maybe it is you that should go away.

Truth? The truth is that I'm not Leland, and I am not in any
conspirisy with anyone else against anyone. You did this all by your
little lonesome. The only one you can blame is yourself, but I guess
that's too much truth for you to swallow. Screwups? Where? You kept
saying that I lied, but you haven't found one yet. Where's the lie,
Twisted?

> Shut yours off son.

I'm not your son.

Group: rec.radio.cb Date: Wed, Apr 18, 2001, 9:26am From:
no-spam@junk-mail.net (Leland C. Scott)
"Twistedhed" <twistedhed@webtv.net> wrote in message
news:23942-3ADCCF35-3@storefull-123.iap.bryant.webtv.net...
Nothing could be further from the truth."
Your so busy chasing your imaginary physiological phantasms that you neglected to noticed the growing criticism toward you from you former compatriots.

"Listen carefully. I understand that autism is treatable, but it is a matter of a simple lack of intellect and comprehension here. Your referral to others beliefs infers I care. Get a grip on yourself."

Nobody cares about who is stomping on your tail.

"Never asked anything from the group. Constantly begging the group for support has always been your forte, Sparkys too. He said he was leaving, as did Leland, and said he was starting his own group, then begged for members. They are still here."

The simple question was put to you however- Are you a convicted sex offender? You have been afforded many opportunities to exonerate yourself
by simply providing your real name and address. A quick and simple check with local law enforcement is all that is necessary once that information is in hand. I have nothing to hide, but you seem to.

"Again, you have a delusion that I actualy care what you believe. I will repeat this for you again s-l-o-w-l-y. I do not care what
you think. The fact that you choose to believe an anonymous poster again demonstrates your herculean intellect and ascertains your trollish existence with the other losers."

Nobody on this news groups cares whose spoofing you except yourself. What really interest people is useful information, like one views on the evening television news, such as if their neighborhood is home to a known sex offender. You silence is the best prosecution witness against you at this point.

"And this is the same Nazi tactic you and the girls try to employ here on the ng. Wrong, chickie. Once again, the burden of proof is on the one bringing the charge, even if it was brought by an anonymous coward."

So are you going to do the right thing, or once again avoid answering a direct question?

"Pot. Kettle black. I asked you two weeks ago why you lied about me in a ham forum, you refuse to answer. Your arrogance once again asks for a courtesy you yourself would not afford."

Hello dB: You have some good question here, but some of the questions must be defined or qualified.

dB wrote:
>
> I basically want to make a 5/8 that outperforms the ones designed, tested
> and sold by pros on my first try without any decent equipment or antenna
> knowledge :-)

This is pie in the sky thinking. You half to do field strength tests to make comparisons between different designs, makes, and models. No one can come out here and design the best antenna off the top of his head, without doing all the testing, tuning, falling of the ladder, throwing rocks at the antenna, kicking the mast, and walking away yelling it will all be in the scrape bin tomorrow, tuning/adjusting one antenna while having the antenna anaylzer connected to another antenna. And so on. The way you ask the question leads me to think this is possible a troll posting? But in your other posts you are taking it all in.

Add in there sleepless nights, running full speed into dead ends, discovering that advertisements on antenna gains are probably all wrong, ect. Talking to antenna design engineers, and even paying them a consulting fee ($$$$) ....

To only realize that your testing and tuning and testing and redesign and more redesign, and more testing will tell you the truth, as long as you document everything.

Any high performance product has been flight tested over and over, with the competitions products tested in comparisons tests. So that the design engineers know where everybodies product performs, and who's lying and who's not. This type of information isn't put into books. The guys who can design antennas with the min of testing walk on water and get paid big dollars, some others write books. But you half to know whats in the books to get a direction, on how to walk on water.

> 1. Will I be able to tune it right with just an SWR meter?

Yes you can. A lot of guys think that tuning the antenna with a field strength meter is the way to go, while ignoring the SWR. There are many many variables here, too many to cover now. Tuning the antenna for max. field strength must be accomplished in such way that reflections from near by objects and the ground will not interfere with the measurements. Tuning for min SWR is a great place to start, but can bite you if you don't know whats going on and keeping an eye on the field strength.

The 5/8 wavelength ground plane antenna, will need to be built to its 5/8 wavelength length, and then have the impedance matching circuit adjusted so that the SWR is at its lowest, 1 to 1 on the operating frequency.

After the SWR is tuned for a min, then the field strength tests can begin.

> 2. Is it worth the trouble to add 4 quarter-wave ground radials?

Absolutely yes. The 5/8 wavelength, over a elevated ground plane will kick ass every time. And have less interference to neighbor consumer electronics in most cases.

> 3. Do I insulate the 21.5 foot section from the base & radials section like
> a regular antenna or does the single-turn matching coil automagically do the
> insulating?

The method of impedance matching the 5/8 wavelength antenna will determine if the vertical element will need to insulated or allowed to be grounded.

No the single-turn coil does not do the insulating. The single turn coil is a impedance matching device, for a insulated vertical element.

> 4. Is 6 feet of thin copper tubing OK for the matching coil? Would smaller
> diameter and more than 1 turn be better? What about those small vertical
> matchers? (gamma match?)

The six feet of copper tubing might be all right, field strength measurements will tell. The smaller the diameter of the impedance matching coil or inductor the more loss. The Gamma match rods (a variable capacitor) are used on Yagi Beam antennas that have low impedance. The Gamma Matches are used on a vertical element that is 3/4 a wavelength in length, or electrical 3/4 wavelength, and do not need a expensive insulator assembly. The Sigma 4 is a 3/4 wavelength antenna, that has a lower hoop that restricts the vertical elements radiation pattern to act like a 5/8 wavelength, instead of a 3/4 wavelength antenna. It uses a Gamma Match. The use of a Gamma Match on a 3/4 wavelength works, but I'll put money on the 5/8 wavelength, with the properly designed insulated vertical element, and low loss impedance matching circuit overtime.

> Well, those are the big question marks over my head... If anybody can add
> tips or suggestions I sure appreciate it.
> Thanks!
> #607 "Beltway" Va. Beach

Hope this helps a little.

>you think.

Nobody cares what you think either, but we do want to know if our neighborhood is a save place to live, without a convicted sex offender living near by. Adults also don't want their kids exchanging messages, publicly like on this news group or privately in a chat room, on the Internet with a known convicted sex offender. Since it has been mention several times in this news group that maybe you are one, you can clear that up quickly by just simply posting your real name and address. The others on the news group will do the rest by checking with local law enforcement to see if you appear on any of the lists that convicted sex offenders must resister their current residential address.

Everyone on this news group knows my name and address. I don't have to hide behind fake names making a post. So what are you trying to covering up? Afraid your name is going to show up on one of those lists? You like to accuse people of various forged posts, and claim they did it. Then challenge them to prove otherwise. This is no different. In fact it is very easy to prove it one way or the other. All you have to do to prove your not a convicted sex offender is to simply post the requested information, and to stop changing the subject. People don't care about your claims of forged posts, they want to know about your criminal status, and if their kids are safe when your around.

Title: Program helps residents solve neighborhood disputes.

By Kathy Mulady
Staff writer

For five years Mavis Wendt listened to her neighbor's citizens band radio conversations. They poured through her television, telephone and radio from early morning until late at night.

"It was nerve-wracking," she says.

Her grandchildren couldn't play Nintendo at her home because the video game picked up the broadcasts, filled with profanity.

Last month, with the help of Safe Streets Now, Wendt took her neighbor, Gary Hutto, to small claims court and was awarded a $1,500 judgement [sic].

<section snipped for sake of space>

Wendt says she called her neighbor several times about the problem since 1993. She even bought electronic filters to eliminate the interference, but they weren't effective.

"I just want my mother back, she has been a nervous wreck with this going on," says Wendt's daughter, Gloria Gilbert.

The Federal Communications Commission was contacted about the "bleed" and sent a letter telling Hutto to reduce his power, but the problem stopped only temporarily.

Hutto dod not appeal Judge Donna Wilson's ruling by the Jan. 7 deadline. He and his wife sent Wendt $5 and a note explaining they will pay her the $1,500 award at $5 per month.

"I can't accept that," says Wendt, "I'm 69 years old, I wond't be around to see that $1,500 paid that way."

But more important than the money, Wendt says she finally has relief.

The CB interference stopped Jan. 3 and she hasn't had a problem since.

"Boy, is it wonderful," says Wendt.

So where's the lie, Twisted?

I can read headers a lot better than you can, and I proved that a few
days ago. The only references where you will see my name with anyone
elses came from you, with the exception of the one you have posted
many times. I responded to that post. What did my response say,
Twisted? At the same time I asked you to back off, didn't I ask the
same of Dougie and others? I sure did, and I'll go back and get the
posts if you are incapable of reading them for yourself.

You still haven't emailed me asking for my real name. Are you avoiding
the truth that I'm not Leland?

And where's the lie, Twisted?

Irresponsible CB'ers like that should get what they deserve... She should go back and drag him into court to get the full award now... $5 a month is a pittance.

Which comes to the point I've been trying to make, and which most people on this NG who seem to want to jump overboard fail to understand.... RESPONSIBLE operation of a radio transceiver will not cause interference. Turn down the modulation to a sane (near, but under or at, 100%) level, and don't run obscene amounts of power (under 100W IMHO is not obscene), and you won't be dragged into court. Work WITH your neighbors if they get interference from your set, and there will be fewer problems. Ignore your neighbors, and you'll end up in court.

As for obscene words, etc, over the airwaves... IMHO if you have to say F*** this S*** blah blah all the time, it shows a lack of creativity, a lack of class, and a lack of intelligence. Think about it.

Sound simple enough?

Where and when? The forges you made or somebody else?

> You claimed a case in Wash that
>you cannot prove. Another lie.

Sorry, you lose again. Where's the lie, Twisted?

> you stated you have nothing to do with
>these clowns, you lied.

I don't, other than the common denominator -- Twistedhed. Didn't you ever wonder why it is only you I am picking on? And why the keyklown gang has you listed as PE#1? Do you think they just picked you at random? Or could it be something else? Hmm... something for you to think about.

> Or, did the guy posting as Punisha lie when he
>refers to all you in one sentence repeatedly?

I don't know if he lied or not. The post was requesting several people to email him, that's all. I didn't, and I didn't when he asked me to email him more recently. If there is any conspirisy, I'm not part of it, and that is something you need to get through your thick skull.

> You were all in on a game
>and were caught, and now, like little children, you deny it all. even
>when confronted with evidence of your own makings, eh clown punisha?"

What evidence, Twisted? There isn't any, for pete's sake. Turn up your cerebral cortex and read the posts for what they say, not for what that little voice in your head says.

That is one of the things I like best about Netscape with FixNews. It automatically posts to news groups with an "anti-spam" return mail address. But when I send regular e-mail, it uses my real return address. No spam for me!

<snip>
Someone once told me that just because I can't hear them doesn't mean
they're not there. Maybe, but highly doubtful.
Did you know the difference between receive and transmit? Did you know
that there are frequencies designated for receive only? Apparently not.
I did talk to a US
Forest Ranger in Burns, Oregon (I think that's where he was, I'd have to
check the log to be sure) years ago and he said he waited for the skip
almost nightly. Yea, I know it's still a form of squatting, but you can
still homestead in parts of the US,
Where? Alaska is off limits to homesteading, and almost everywhere else
has been designated a national park or wilderness area.

"Several states have abandoned property clauses, homesteading is still a
real possibility
especially if you farm it."

So where is homesteading allowed in the US?

"Check with your local agricultural or farm bureau for informattion in
your state."

and also legally "steal" property if
a landowner is negligent.

Really? How?

"Practiced often in slums as well as the suburbs.. Realty agents often
search for back taxes owed and attempt to contact the delinquent owner
and bail them out for pennes on the dollar. If a landowner is delinquent
on his property tax, say, on that vacant lot next to you, and you were
to pay the taxes and maintain it for X (varies by state) amount of time,
you may have a legal right to claim it if certain conditions are met.
Check your laws concerning abandoned properties."

Have you ever legally stolen someone elses property?
Aren't you afraid of the owner shooting you? If you legally steal it,
and the owner tries to legally take it back, can you legally shoot him?
Or does he legally shoot himself?

Episode # 1 now showing for your viewing pleasure at:
http://www.RattyOShack.com
Ratty O' Shack is my comic strip about an alien from the planet "Teck-nul-ogie", who arrives here on earth thinking he has cloned himself to look like a human.. only to find his physical replicator device didn't do such a good job. He must now fit in with human kind until he can return home... but before that, he must survive using his superior brain power and anything else... such as pure luck... to get him through each day. Follow his Adventures, which should prove.. very interesting.

  Y'all are ate up with it all, posting 'round the clock..."twistie
watch".....hahahah! So do tell, Sparky."
First you are paranoid about the government, now you are paranoid about
the newsgroup. What's next, your family?

"Nope. Family and friends are the only ones to trust."

You are only assuming that my attitude is arrogant. Stop deluding
yourself. If you can't handle the truth, or answering for your screwups,
maybe it is you that should go away.
Truth? The truth is that I'm not Leland, and I am not in any conspirisy
with
"Yea , yae, we know. Just like Kari denied having anything to do with
you guys, but your names are used in the same sentence many times by
who, Sparky? Who is that? Why, it's the same person y'all put so much
belief in what he says. That and your trolls are always together."
You can try to back that one up anytime you think you can. It should be
very entertaining.

"Already have. Porn poster refers to you and dogie and kari and leland on a few separate occasions, stating you all share the same beliefs and to email him. Again, did he lie? How do you decide what posts he makes to believe?"

anyone else against anyone. You did this all by your little lonesome. The only one you can blame is yourself,
"Thanks for demonstrating YOUR ignorance of the subject. Only I don't think it's ignorance on your behalf. I believe it is malice with intent on you, Leland, and our soon to be famous wonderhawk's behalf."
Identity problem again.
  but I guess that's too much truth for you to swallow. Screwups?
Where? You kept saying that I lied, but you haven't found one yet.
Where's the lie, Twisted?
Why no reply to this? Where's the lie, Twisted?
Shut yours off son.
I'm not your son.
"Nope, you aren't. My son would have better manners and wouldn't have as many misfiring neurons as you."
.....
So unless you have something constructive instead of attacking me every single time I make a fool of you because of your inability to answer your own lies, I suggest you ease up on the caffeine. You are beginning to appear uneasy and anxious.
You are making a fool of yourself all the time.

"If that makes you happy, great. The ng needs anything right now but porn and trash."
Once again I ask: Where are the lies?
"I showed you many. You too, also intentionally and incorrectly attributed forges as authentic posts.
Where and when? The forges you made or somebody else?

"Another lie. Please post one single forge from me complete with headers. You were doing so well and then succumbed to the arrogance, intentionally attempting to perpetuate that lie, like leland did in the hammie forum."

  You claimed a case in Wash that
you cannot prove. Another lie.
Sorry, you lose again. Where's the lie, Twisted?
  you stated you have nothing to do with
these clowns, you lied.
I don't, other than the common denominator -- Twistedhed. Didn't you ever wonder why it is only you I am picking on?

"No. Never wondered. I know why. You are a troll. Interesting you consider scratching your backside and sniffing your claw as "picking on me. I never looked at it that way at all. I also find it funny how you girls peruse my old posts, reaching for anything you can. I remember several instances of your arrogance getting your beak slapped by others long before you "picked on me." Property laws? hahahah!. You are reaching.....trolling.....All of yours were sent to me. I figured,

judging by the frequency and arrogance in your posts, you know, begging for a new group, etc., that you were another loser like those mentioned. And guess what? I was right."

And why the keyklown gang has you listed as PE#1? Do you think they just picked you at random?

"Of course not. Look at the pattern. Anyone who dares speak a point of view different than theirs, are brow beat, called names, ridiculous accusations, same thing they did to me. Only I didn't curl up and go away like they are so used to. They are bullies and bullies always self destruct."

Or could it be something else? Hmm... something for you to think about.
  Or, did the guy posting as Punisha lie when he refers to all you in one sentence repeatedly?
I don't know if he lied or not. The post was requesting several people to email him, that's all. I didn't, and I didn't when he asked me to email him more recently. If there is any conspirisy, I'm not part of it, and that is something you need to get through your thick skull.
You were all in on a game
and were caught, and now, like little children, you deny it all. even when confronted with evidence of your own makings, eh clown punisha?"
What evidence, Twisted? There isn't any, for pete's sake.

"You can say whatever you please, you always do, which is why we are having a conversation that had nothing to do with you in the first place until you stuck your beak in. Now you are trying to turn it around like lean and kari tried to do, only it backfired on both of them too."

Turn up your cerebral cortex and read the posts for what they say, not for what that little voice in your head says.

"That little voice is instinct, which has become finely honed over the years. Too bad it has nothing to do with you girls trolling together."

Sparky, FLCD

4840. Re: Military antenna conversion

Newsgroup: rec.radio.cb
Date: 2001-04-19 01:38:15 UTC

Source record: 79315

What is it, a yagi, quad, vertical, loop, horizontal-dipole? we need more information.
Let us assume it is a vertical. Try lengthening or shortening it until it is resonant in the 11meter CB.
Then use a tuner (if necessary) to achieve a appreciable SWR, preferably below 2:1.
Contrary to popular belief, a tuner is a Impedance matching device.
The transmitter (source) will not supply maximum power to the antenna (load) until the input Impedance of the antenna matches the output Impedance of the transmitter.
Let me know exactly what type of antenna it is and i will try to help you further....

First of all...I want to honestly THANK YOU for pirating my call, and making a few bogus posts here in the NG. It's often said that 'immatation is the finest form of flattery.' So with that in mind...again, I THANK YOU!
Secondly, the AMERICAN EAGLE SSB CB'ers CLUB does NOT condone illegal radio operations. But we cannot, and will not police members who chose to do so. Our membership is simply too large for this to even be a concern of ours. We are NOT the Government, and we do NOT care what YOU do in your own private radioroom!
'Nuff said on that. And last, but not least, give us a real good look. We're at:
www.american-eagle.tripod.com

73's...and have a GREAT day!

While I may not support Twistedhed as much
as others, I surely don't support the three poeple
that are playing this game.
It's not enough that you three have come
here with a vigilante attitude, but this multiple
posting of vile, vulgar pornography is abhorrent.
Yes people do illegal things, yes they could
face fines and such, but that is the duties of the
sworn government officials to which they are
assigned, NOT VIGILANTES!
I don't mind the bickering, even an occasional
raw post, but when you are so low as to cower
behind forged identities.....Well so be it.
Then when you post Vile, Vulgar, obscene,
harassing posts, well it should be noted that those
post can be forwarded complete with headers
to said ISP.

Message-ID: <3ADE4E4A.91049DC4@pacbell.net>
Source record: 79318

The 1729 is a center fed dipole with a pre set tuner at various freqs across 30 to 76mhz. You should be able to re tune the lowest freq coil to resonate at 27mhz. Others have used the antenna in the 50mhz range with ok results on cb.

4846. CB or AM/FM/CB Power Antennas

Newsgroup: rec.radio.cb

Yep, I have the BEST ones ever made--the 2 wire Motorola 1977? units that can wire in using the stock car wiring--you just run the new coax & splitter. Can be converted to CB ONLY or the AM/FM/CB 42" Power antenna that they are.

Brand new in the box NOS Fully Automatic, and the Semi automatic is also fully automatic with a switch. $70 each, Dealer quantities and prices too. I will beat all current suppliers prices for a easier wiring power antenna than all 3 wire antennas . E mail me with questions @ truth@planetc.com
Dave

If you didn't forge any posts, fine. But answer the questions, where did I attribute a forge as an authentic post?

> You were doing so well and then succumbed to the arrogance,
>intentionally attempting to perpetuate that lie, like leland did in the

>hammie forum."

Interesting, now Leland is someone else. Make up your mind, am I
Leland or Sparky?

BTW, I'm still waiting for you to back up all the crap you have spewed
so far:

1) that I am Leland;
2) that I am a liar;
3) that I post porn;
4) that I am part of a conspiracy;
5) that I defend anyone else for posting porn or profanity;

Proof, man, post some proof. I have backed up everything you wanted me
to back up so far, now it's your turn.

>=A0=A0You claimed a case in Wash that
>you cannot prove. Another lie.
>Sorry, you lose again. Where's the lie, Twisted?

No response. You said you would admit when you are wrong, so what are
you waiting for?

>=A0=A0you stated you have nothing to do with
>these clowns, you lied.
>I don't, other than the common denominator -- Twistedhed. Didn't you
>ever wonder why it is only you I am picking on?
>
>"No. Never wondered. I know why. You are a troll. Interesting you
>consider scratching your backside and sniffing your claw as "picking on
>me. I never looked at it that way at all. I also find it funny how you
>girls peruse my old posts, reaching for anything you can. I remember
>several instances of your arrogance getting your beak slapped by others
>long before you "picked on me." Property laws? hahahah!. You are
>reaching.....trolling.....All of yours were sent to me. I figured,
>judging by the frequency and arrogance in your posts, you know, begging
>for a new group, etc., that you were another loser like those mentioned.
>And guess what? I was right."

But why only you, Twisted? Because you keep begging for it. You keep
coming back for more. Do you really think it will stop? It's very
simple -- you leave me alone and I'll leave you alone. I'm still
willing to live by that rule, but you sure don't seem interested in
leaving anything alone, you just keep pushing. And now that I'm
pushing back you complain that much more.

How long this goes on is up to you. And like I said before, you can't
blame anyone else but yourself. Or did you forget about "taking
responsibility for your own actions"?

>And why the keyklown gang has you listed as PE#1? Do you think they just
>picked you at random?

>
>"Of course not. Look at the pattern. Anyone who dares speak a point of
>view different than theirs, are brow beat, called names, ridiculous
>accusations, same thing they did to me. Only I didn't curl up and go
>away like they are so used to. They are bullies and bullies always self
>destruct."

So your pride got a little hurt. Stick a band-aid on it and move on.
Take the example from others in the newsgroup. Call it what you want,
but at least they are smart enough to know that N8's posts mean
nothing, and mature enough to walk away from a bully picking a fight.
Are you so stupid to think that you can win a fight in a newsgroup?

>Or could it be something else? Hmm... something for you to think about.
>=A0=A0Or, did the guy posting as Punisha lie when he refers to all you

(Twistedhed) wrote:

>"Several states have abandoned property clauses, homesteading is still a
>real possibility
>especially if you farm it."

Abandoned property is just that. Making a claim on abandoned property
is not theft.

> So where is homesteading allowed in the US?
>
>"Check with your local agricultural or farm bureau for informattion in
>your state."

You missed the question. You made the claim that homesteading is
allowed in the US and I asked where. Back up your claim like I did:
YOU tell ME what state allows homesteading.

>and also legally "steal" property if
>a landowner is negligent.
>
>Really? How?
>
>"Practiced often in slums as well as the suburbs.. Realty agents often
>search for back taxes owed and attempt to contact the delinquent owner
>and bail them out for pennes on the dollar.

That's not theft if the landowner agrees to the purchase or bailout.

> If a landowner is delinquent
>on his property tax, say, on that vacant lot next to you, and you were
>to pay the taxes and maintain it for X (varies by state) amount of time,
>you may have a legal right to claim it if certain conditions are met.
>Check your laws concerning abandoned properties."

When taxes are owed on a property, a lien is automatically placed on
that property by the taxing district (depending upon the district).
Either way, when title is transferred due to abandonment of tax
responsibilities, it is because the government entity holds a claim on
that property. That's not theft.

>Have you ever legally stolen someone elses property?
>Aren't you afraid of the owner shooting you? If you legally steal it,
>and the owner tries to legally take it back, can you legally shoot him?
>Or does he legally shoot himself?

These were all good questions, why ignore them?

As long as an effort is being made to pay, there isn't much that anyone
can do about the timetable.

>
> Which comes to the point I've been trying to make, and which most people
> on this NG who seem to want to jump overboard fail to understand....
> RESPONSIBLE operation of a radio transceiver will not cause
> interference.

Not necessarily true. I used to have problems with certain neighbors
when running a perfectly legal radio. The problem is that most modern
consumer electronics are not built with the proper shielding, to reduce
the amount of unwanted RF that leaks into the device. That's why one
brand of TV may be totally destroyed by a nearby transmitter, whaile
another brand is perfectly immune.

> Turn down the modulation to a sane (near, but under or at,
> 100%) level, and don't run obscene amounts of power (under 100W IMHO is
> not obscene), and you won't be dragged into court. Work WITH your
> neighbors if they get interference from your set, and there will be
> fewer problems. Ignore your neighbors, and you'll end up in court.

The problem is that no matter what the circumstances are, you, as a
radio operator, are always placed on the defensive. "you must be running
something illegal", or "You're CAUSING interference". In fact, you may
be running a perfectly legal station, and nothing that you do on your
end can solve the problem (other than not transmitting at all). People
need to realize that most of the problems are caused by poorly designed
consumer grade widgets. As long as the public continues to be duped into
believing that they have no responsibility (through the intelligent
purchase of suitable devices), to limit their subceptability to
interference, that they will be unrealistic in their demands that you
cease and desist all radio operations. The FCC has to shoulder part of
the blame as well for not adopting stricter interference suppression
requirements on consumer electronic goods.

In their minds, the radio operator is the sole cause of the problem.
After all, if the radio op weren't there, there would be no problem. But
radio ops have the right to pursue a radio hobby just as much as somone
has the right to watch Oprah Winfrey. What makes the problem worse is

the confrontational attitudes that are often displayed. The irate neighbor demands that you stop interfering. The radio op, states that his equipment is 100% legal, so the problem is the neighbors, and it becomes a battle from there. It's tough for someone, who has no understanding of RF theory and radio practice, to comprehend the factors involved.

The sad fact of society is that we tend to treat a minority problem (radio operators) like second class citizens, and laws get passed that restrict their rights, as a quick solution to an interference problem, rather than take the necessary steps to do it the right way (which would add to the cost of every consumer electronic device). The more illegal radio ops there are, the more their actions will bring about even more restrictive laws that will affect the rest of us as well.

Here is another of your lies. Yesterday you said that I made this your business. You said I brought you into this. Let's review where you stuck your beak in where it didn't belong, shall we? You posted the following little gem when you saw your pink ladies being slapped around:

Since my name usually gets included with the

"Did I mention you? No. MAtter of fact, no one did. This proves you are a troll. You incriminated yourself., just as Doug did, and Leland."

group you are talking about, you might decide to include me as a defendant in your complaint.
"If you are gulity, so be it. If you are not, blow it out the window, although I am sure I am not the only one who is questioning your motives at this point. Why would ANYONE try to defend what has taken place here, unless the heat is one and they feel it on themselves?"

But since you are clueless as to the scope and application of the RICO act,
your complaint will be met with one of my own for malicious prosecution, and you will not even be able to file Chapter 7 to avoid the damages. So, in your quest for revenge, you better be damn careful where you start pointing your legal finger

"Did I say I had a clue troll? I asked in the form of the question, did I not?
Bring it on anonymous (HAHAHAHAHA) tough guy. I did nothing wrong. So file suit, or shut your piehole, troll."

Sparky, FLCD

Remember that Sparkles? That was how you stuck your beak where it didn't belong. So in the above, we have yet two more lies by you exposed. How many more ya' need, Sparkles? If it walks like a ch, ..er, duck.....

The Grant LT is the same as the old style 148gtl and the grant xl. Both are a good choice for a radio. I have an LT and it tuned the same way as a 148. Got it doing 8-9 bird and 25-28 bird peak.

(Twistedhed) wrote:
"Several states have abandoned property clauses, homesteading is still a
real possibility
especially if you farm it."
Abandoned property is just that. Making a claim on abandoned property is
not theft.

"Which is why you are making a play on words. The quotations around the
word "steals, were put there for a reason. Comprehension thing again,
eh? Must have taken English lessons from Leland."

So where is homesteading allowed in the US?
"Check with your local agricultural or farm bureau for informattion in
your state."
You missed the question. You made the claim that homesteading is allowed
in the US and I asked where. Back up your claim like I did: YOU tell ME
what state allows homesteading.

"Actually, I don't think you understand exactly what homesteading means.
It has many meanings. To quote only a few of Websters Encyclopedic
Unabridged Dictionary of the English Language:

"Homesteading- 1) An act or instance of establishing a homestead. 2) A
federal program designed to improve urban deteriorating by offering
abandoned or foreclosed homes."
"Homesteading isn't just about staking a claim in the woods anymore. Any
real estate agent can tell you where to obtain pertinent information for
your area and a peek in your phone book will offer clues..(hint) Start
with Government offices. Just about every state offers some form of this
in one way or another. If I felt you were sincere, I would be glad to
assist you, somehow, I feel you are not."

and also legally "steal" property if
a landowner is negligent.
Really? How?
"Practiced often in slums as well as the suburbs.. Realty agents often
search for back taxes owed and attempt to contact the delinquent owner
and bail them out for pennes on the dollar.
That's not theft if the landowner agrees to the purchase or bailout.

"Which is why the word was in quotes. When an owner finds himself with
his back against the wall and doesn't want to sell, but must, I wouldn't
exactly call that "agreeing".

If a landowner is delinquent
on his property tax, say, on that vacant lot next to you, and you were to pay the taxes and maintain it for X (varies by state) amount of time, you may have a legal right to claim it if certain conditions are met. Check your laws concerning abandoned properties."
When taxes are owed on a property, a lien is automatically placed on that property by the taxing district (depending upon the district). Either way, when title is transferred due to abandonment of tax responsibilities, it is because the government entity holds a claim on that property. That's not theft.

"Again, see above. A lien is NOT automatically placed on property. Many attempts at contact are made to notify the owner of any pending action. It most cases it must go before a judge in a court of law unless a prior agreement was signed by the purchaser that somehow waived their rights, or their city government dictates otherwise. It is not automatic by any means. If one were to locate an abandoned parcel that has a tax delinquency and was to make good the outstanding debt and continue to maintain the parcel, one can indeed lay a claim to it long before a lien is placed on it."

Have you ever legally stolen someone elses property? Aren't you afraid of the owner shooting you? If you legally steal it, and the owner tries to legally take it back, can you legally shoot him? Or does he legally shoot himself?
These were all good questions, why ignore them?

"Because they are not pertinent and are consistent with your trolls. If you are truly interested in my real estate ventures, send me a number where I can reach you and I would be glad to give you a call and explain how even you, can become a homeowner. If you don't muff that up, you may be able to buy some land as well without coming out of pocket.""

Why does almost everyone want such strong radios and such. It was much more fun when everyone used just their radio and antenna, nothing else. Oh, that was 30 or 40 years ago when I first started in CB. The good old days.

Dennis in GA.

Source record: 79342

Lack of common courtesy, responsibility and the "mine's bigger than yours" attitude that most kids go through.

Everyone has to have a bigger radio than the other guy so that he can be heard. It's a vicious cycle of needing to have a bigger radio because the other guy has a bigger one. When I got into CB back in the mid 1970's a big amp was 50 watts. A guy a mile or so from me had a 100 watt amp and a Moonraker-6. He was the envy of the town because he could talk all over the country and sometimes to other countries with his setup. But back then the noise level was maybe S3-4 on bad skip days. Now it's S9+20 much of the time. Yep, the good old days...they won't be back until they can find some way to enforce laws against stupidity.

The Gizmotchy has been around since the 60's. It was originally built by Utica in Chicago, IL. The original version was a 3 element and Charles bought the patent when Utica closed down. Charles made improvements to the original design by using "aircraft aluminum" and the ability to add elements with the "booster kits". Also Teflon gamma match kits are available for high power users.

A great beam. My 5 element has a boom length of approximately 16' and weight is around 20 lbs. It's been up for 5 years and never have had a problem. Great all weather tolerance and no problem with wind resistance.

Pete in NE IL

The fact is "matched" transistors is a marketing ploy. Maybe 1 in a 1000 transistors when tested for beta gain differences are
actual out of tolerance. What you should be concerned with is that the transistors are from the same lot. There are codes on the transistors that signify lot batch.

Dave:

You apparently missed my point....

...which was this: A RESPONSIBLE Radio operator will work with his neighbors to minimize and/or eliminate interference. A RESPONSIBLE radio operator will run his set in such a way as to not cause interference to most electronic devices in the first place. Front-end overloading does occur in "cheap" electronics (like the upstairs neighbor's cheap $8 telephone that my Cobra 2000 was "interfering" with. A $0.19 ferrite ring fixed the problem, and I sprung for it). If the interference is due to front-end overload, it's the owner of the equipment that's getting the interference's responsibility to fix the problem. If the station is causing other interference, it's the station operator's responsibility to remedy the situation.

So I stand by my statement. RESPONSIBLE operation of a radio transceiver will not cause interference.

-SSB

You mean that you are going to try and convince me that, even after
the post by Dougie where he asks me and others to email him, you had
no suspicions that I was part of his conspiricy? If you expect anyone
to believe that then you are high. Especially after you repost that
"proof" half a dozen times and accuse me of being Leland.

You were the first person to threaten a lawsuit for the harassment
that you seem to beg for. You are the one that keeps crying about me
being an anonymous poster when I have offered to give you my real
name, something you have not done. (Pot, kettle, black?) You sure lay
it on thick.

You said that you would admit when you are wrong (do I have to dig up
that post, too?) You accused me of making up the story of the lady who
sued her neighbor, and you did so several times. So when are you going
to admit that you were wrong? I have proved you wrong many times, and
not once have you admitted you were wrong. You lied time and time
again, you keep accusing me of lying and I keep proving you the liar.
When are you going to quit?

And when are you going to back up your crap and prove:

1) that I am Leland;
2) that I am a liar;
3) that I post porn;
4) that I am part of a conspiracy;
5) that I defend anyone else for posting porn or profanity;
6) that I have accused you of child molestation;
7) that I have accused you of homosexuality;
....and since you are so fond of changing the gender of myself and
others you don't like,
8) that I am a girl.

When you can back up all these accusations you have made (with VALID
proof, not just rumors or your own subjective opinions) I'll go away.
Until then, shut your fat ass.

Sparky, FLCD

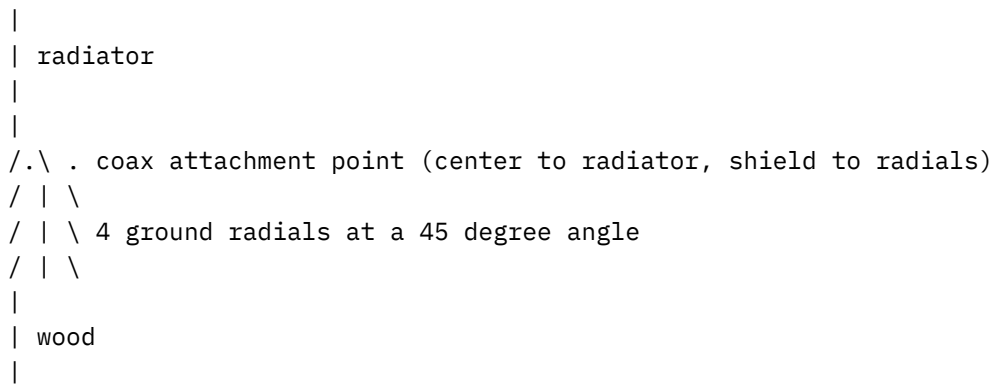
I got an old RS 1/4 ground plane that I take camping. I mount it on an eight foot piece of 1x2, attach RG8m coax to it and have a 1.2 SWR. This simple design of a quarter wave radiator and 4 quarter wave ground radials at a 45 degree angle, for proper impedance, works like a champ every time I set it up.



Of course a 5/8 wave would have a lower angle of radiation. No problem talking over 50 miles barefoot from the top of a mountain on sideband!

I used a 7Ah battery on a 2950 the whole night from inside my tent. (I hate having to give that radio back after special events!)

Reasons Why The English Language Is Hard To Learn:

1) The bandage was wound around the wound.
2) The farm was used to produce produce.
3) The dump was so full that it had to refuse more refuse.
4) We must polish the Polish furniture.
5) He could lead if he would get the lead out.
6) The soldier decided to desert his dessert in the desert.
7) Since there is no time like the present, he thought it was time to present the present.
8) A bass was painted on the head of the bass drum.
9) When shot at, the dove dove into the bushes.
10) I did not object to the object.
11) The insurance was invalid for the invalid.
12) There was a row among the oarsmen about how to row.
13) They were too close to the door to close it.
14) The buck does funny things when the does are present.
15) A seamstress and a sewer fell down into a sewer line.
16) To help with planting, the farmer taught his sow to sow.
17) The wind was too strong to wind the sail.
18) After a number of injections my jaw got number.
19) Upon seeing the tear in the painting I shed a tear.
20) I had to subject the subject to a series of tests.
21) How can I intimate this to my most intimate friend?

only cause we're at the peak of a sunspot cycle and at the time you are comparing it to was a low.

"Kevin Muenzler, WB5RUE" <wb5rue@arrl.net> wrote in message news:s2ED6.12926$2S6.119463@newsread1.prod.itd.earthlink.net...
Lack of common courtesy, responsibility and the "mine's bigger than yours" attitude that most kids go through.

Everyone has to have a bigger radio than the other guy so that he can be heard. It's a vicious cycle of needing to have a bigger radio because the other guy has a bigger one. When I got into CB back in the mid 1970's a big amp was 50 watts. A guy a mile or so from me had a 100 watt amp and a Moonraker-6. He was the envy of the town because he could talk all over the country and sometimes to other countries with his setup. But back then the noise level was maybe S3-4 on bad skip days. Now it's S9+20 much of the time. Yep, the good old days...they won't be back until they can find some way to enforce laws against stupidity.

Source record: 79225

"As long as an effort is being made to pay, there isn't much that anyone can do about the timetable."

This is very true. A chap at work had a judgement against him and he employed a similar tactic. Seems as though it would actually cost the plaintiff more to try and force larger or full payment(s) than to just drop it. Strange thing is the plaintiff can't recoup the court costs associated with the effort. Seems that only applies to frivolous law suits...like I said, strange!

<snip crap>
Remember that Sparkles? That was how you stuck your beak where it didn't belong. So in the above, we have yet two more lies by you exposed. How many more ya' need, Sparkles? If it walks like a ch, ..er, duck.....
You mean that you are going to try and convince me that, even after the post by Dougie where he asks me and others to email him, you had no suspicions that I was part of his conspiricy? If you expect anyone to believe that then you are high.

"You are just as bad as the computer college grad who can't tell who posts what. I don't "expect" anything. I show your lies and people will think what they may. You said I made you part of this. That was a lie. I did no such thing. You stuck your nose in and then I fired on you and then you cry about the accuracy of my posts. Tell you what. Simple answer. You feel you are being falsely accused? Pipe down, and mind your business. Again, YOU brought yourelf into the fold, which makes you a troll."

Especially after you repost that "proof" half a dozen times and accuse me of being Leland.
You were the first person to threaten a lawsuit for the harassment

"Wrong. This is where you have that comprehension deficiency thing going on again."

that you seem to beg for. You are the one that keeps crying about me being an anonymous poster when I have offered to give you my real name,

"So give it, if that will make you feel better about your trolling self."

something you have not done.

"And just why would I care or want to do that? To prove something to you? Don't think so, son."

(Pot, kettle, black?) You sure lay it on thick.
You said that you would admit when you are wrong (do I have to dig up that post, too?) You accused me of making up the story of the lady who sued her neighbor, and you did so several times. So when are you going to admit that you were wrong? I have proved you wrong many times, and not once have you admitted you were wrong. You lied time and time again, you keep accusing me of lying and I keep proving you the liar.

"Oh, so you DIDn"t Stick your nose in with a stupid comment, "Since my name is likely to be brought up anyway,"...I also showed you did that as well after a firm denial from you."

When are you going to quit?

"As soon as you pack up and leave and start that ng like you said you were going to."

And when are you going to back up your crap and prove:
1) that I am Leland;
2) that I am a liar;
3) that I post porn;
4) that I am part of a conspiracy;
5) that I defend anyone else for posting porn or profanity;
6) that I have accused you of child molestation;
7) that I have accused you of homosexuality; ....and since you are so fond of changing the gender of myself and others you don't like,
8) that I am a girl.
When you can back up all these accusations you have made (with VALID proof, not just rumors or your own subjective opinions) I'll go away. Until then, shut your fat ass.
Sparky, FLCD

Oh, it is perfectly ok for you to question a person about an anonymous posters accusations,
but I don't see you asking them for VALID proof. How ya' like me now, Sparkles? A page right out of your own book.
By the way, your reply about your name being in the same sentence with KAri, Leland, and Dogie, means jack. I showed where all three lied, and since your posts are always clustered together with theirs, and the way you stuck your beak in something that didn't concern you (and then denied it and tried to say I brought your lying tail into this) when your pink cohorts were getting slapped, well, reasonable doubt about your motives and intentions have definitely been proved. Birds of a feather......"

The teacher gave her fifth-grade class an assignment. Get their parents to tell them a story with a moral in it. Next day, Kathy said, "Myfather's a farmer, and we have a lot of egg-laying hens. One time we were taking eggs to market in a box on the front seat of the truck, when we hit a bump and a lot of them broke and made a mess." "So, what's the moral of the story," asked the teacher.
"Don't put all your eggs in one basket," answered Kathy. Another child, Lucy, told her story. "Our family are farmers too. But we raise chickens for the meat market. We had 16 eggs one time, but when they hatched, we only got 10 live chicks. And the moral to this story is: don't count your chickens until they hatch." "That was fine," said the teacher. "Now, Johnny, do you have a story too?"
"Yes, ma'am. My daddy told me about my Aunt Karen. She was a Navy C-130 flight engineer in Desert Storm in Iraq. And her plane got hit. "She had to bail out over enemy territory. All she had was a bottle of whiskey, a machine gun and a machete. She drank the whiskey on the way down so it wouldn't break. Then she landed in the middle of 100 enemy troops.
She killed 70 with the machine gun until she ran out of bullets. She hacked 20 more with the machete until the blade broke. And she killed the last 10 with her bare hands."
"Good heavens!" exclaimed the horrified teacher. "What kind of moral did your daddy tell you was in this terrible story?"
"Don't fuck with Aunt Karen when she's been drinking

From: "Dianne Henry" <diannehenry@hotmail.com>
Subject: Fwd: School Shootings and White Denial
Date: Fri, 09 Mar 2001 16:20:35 -0000a
Interesting commentary.....it's long but worthwhile reading. School Shootings and White Denial Tim Wise, AlterNet March 6, 2001

I can think of no other way to say this, so here goes: White people need to pull our heads out of our collective asses. Two more white children are dead and thirteen are injured, and another "nice" community is scratching its blonde head, utterly perplexed at how a school shooting the likes of the one yesterday in Santee, California could happen. After all, as the Mayor of the town said in an interview with CNN: "We're a solid town, a good town, with good kids, a good church-going town...an All-American town." Yeah, well maybe that's the problem. I said this after Columbine and no one listened so I'll say it again, white people live in an utter state of self-delusion. We think danger is black, brown and poor, and if we can just move far enough away from "those people" in the cities we'll be safe. If we can just find an "all-American" town, life will be better, because
"things like this just don't happen here." Well bullshit on that. In case you hadn't noticed,
"here" is about the only place these kinds of things do happen. Oh sure, there is plenty of violence in urban communities and schools. But mass murder; wholesale slaughter; take-a-gun-and-see-how-many-you-can-kill kinda craziness seems made for those safe places: the white suburbs or rural communities. And yet once again, we hear the FBI insist there is no "profile" of a school shooter. Come again? White boy after white boy after white boy, with very few exceptions to that rule (and none in the mass shooting category), decides to use their classmates for target practice, and yet there is no profile?

Imagine if all these killers had been black: Would we still hesitate to put a racial face on the perpetrators? Doubtful. Indeed, if any black child in America -- especially in the mostly white suburbs of Littleton, or Santee -- were to openly discuss their plans to murder fellow students, as happened both at Columbine and now Santana High, you can bet your ass that somebody would have turned them in, and the cops would have beat a path to their doorstep. But when whites discuss their murderous intentions, our stereotypes of what danger looks like cause us to ignore it -- they're just "talking" and won't really do anything. How many kids have to die before we rethink that nonsense? How many dazed and confused parents, Mayors and Sheriffs do we have to listen to, describing how "normal" and safe their community is, and how they just can't understand what went wrong?

I'll tell you what went wrong and it's not TV, rap music, video games or a lack of prayer in school. What went wrong is that white Americans decided to ignore dysfunction and violence when it only affected other communities, and thereby blinded themselves to the inevitable creeping of chaos which never remains isolated too long. What affects the urban "ghetto" today will be coming to a Wall-Mart near you tomorrow, and unless you address the emptiness, pain, isolation and lack of hope felt by children of color and the poor, then don't be shocked when the support systems aren't there for your kids either.

What went wrong is that we allowed ourselves to be lulled into a false sense of security by media representations of crime and violence that portray both as the province of those who are anything but white like us. We ignore the warning signs, because in our minds the warning signs don't live in our neighborhood, but across town, in that place where we lock our car doors on the rare occasion we have to drive there. That false sense of security--the result of racist and classes stereotypes -- then gets people killed. And still we act amazed. But listen up my fellow white Americans: Your children are no better, no nicer, no more moral, no more decent than anyone else. Dysfunctions is all around you, whether you choose to recognize it or not.

According to the Centers for Disease Control, and Department of Health and Human Services, it is your children, and not those of the urban ghetto, who are most likely to use drugs. That's right: White high school students are seven times more likely than blacks to have used cocaine; eight times more likely to have smoked crack; ten times more likely to have used LSD and seven times more likely to have used heroin. In fact, there are more white high school students who have used crystal methamphetamine (the most addictive drug on the streets) than there are black students who smoke cigarettes.

What's more, white youth ages 12-17 are more likely to sell drugs: 34% more likely, in fact than their black counterparts. And it is white youth who are twice as likely to binge drink, and nearly twice as likely as blacks to drive drunk. And white males are twice as likely to bring a weapon to school as are black males. And yet I would bet a valued body part that there aren't 100 white people in Santee, California, or most any other "nice" communities who have ever heard a single one of the statistics above. Even though they were collected by government agencies using these folks' tax money for the purpose. Because the media doesn't report on white dysfunctions.

A few years ago, U.S. News ran a story entitled: "A Shocking look at blacks and crime." Yet never have they or any other news outlet discussed the "shocking" whiteness of these shoot-em-ups. Indeed, every time media commentators discuss the similarities in these crimes they mention that the shooters were boys, they were loners, they got picked on, but never do they seem to notice a certain highly visible melanin deficiency. Color-blind, I guess. White-blind is more like it, as I figure these folks would spot color mighty damn quick were some of it to stroll into their community. Santee's whiteness is so taken for granted by its residents that the

Mayor,in that CNN interview, thought nothing of saying on the one hand that the town was 82 percent white, but on the other hand that "this is America." Well that isn't America, and it especially isn't California, where whites are only half of the population. This is a town that is removed from America, and yet its Mayor thinks they are the normal ones -- so much so that when asked about racial diversity, he replied that there weren't many of different "ethni-tis-tities." Not a word. Not even close.

I'd like to think that after this one, people would wake up. Take note. Rethink their stereotypes of whom the dangerous ones are. But deep down, I know better. The folks hitting the snooze button on this none-too-subtle alarm are my own people, after all, and I know their blindness like the back of my hand.

Packrat is right! In the mid-70's, skip wasn't as bad as it was in '81 or so when the peak hit (I remember 9 & 10 db on Ch. 19 heterodyne! 5 years earlier it was worse.

The REAL reason for the strong radios is that they came from the "hood." Then in time the black truckers brought it to Ch. 19 and it's the same thing--"When I key down NO ONE is goint to talk over me," or "I'm not going to get WALKED ON." This has escalated in the hood to get to 1000- 30kw run out of mobeels, making dem da BIG BOYZ !
Dave!!!!!!!!!!!!!!!!!!!

Lack of common courtesy, responsibility and the "mine's bigger than yours" attitude that most kids go through.

Everyone has to have a bigger radio than the other guy so that he can be heard. It's a vicious cycle of needing to have a bigger radio because the other guy has a bigger one. When I got into CB back in the mid 1970's a big amp was 50 watts. A guy a mile or so from me had a 100 watt amp and a Moonraker-6. He was the envy of the town because he could talk all over the country and sometimes to other countries with his setup. But back then the noise level was maybe S3-4 on bad skip days. Now it's S9+20 much of the time. Yep, the good old days...they won't be back until they can find some way to enforce laws against stupidity.

Yeah, we know. And the person is such a coward that he/she is using an anonymizer service to hide his/her actions, which most probably would get the person's service cancelled.

Please stop quoting the entire text - just quote enough that we know which article you are talking about. For most of us, we know that it is a forgery, without you posting anything - the forgeries are not all that good.

Jay in the Mojave <jay123a@qnet.com> wrote:
:
:> 1. Will I be able to tune it right with just an SWR meter?

: Yes you can. A lot of guys think that tuning the antenna with a field
: strength meter is the way to go, while ignoring the SWR. There are many
: many variables here, too many to cover now. Tuning the antenna for max.
: field strength must be accomplished in such way that reflections from
: near by objects and the ground will not interfere with the measurements.

If you are out of the near field of the antenna, then reflections don't
matter, as any reflections are at a constant percentage of the radiated
power. Now, if you are looking for absolute gains, then you need to be
using a properly designed and characterized antenna range.

All an SWR meter will do is tell you where the impedance is 50 ohms,
assuming you are using 50 ohm coax. It will NOT necessarily tell you
at what frequency the antenna is resonant. If the coax losses can be
ignored, such as with short runs, then you want a resonant antenna
for maximum radiated power - SWR is immaterial as long as the transmitter
can handle it.

: Tuning for min SWR is a great place to start, but can bite you if you
: don't know whats going on and keeping an eye on the field strength.

It is great if the antenna is somewhere around 50 ohms at resonance.
Many antennas, including a 1/4 wave whip, are not.

: The 5/8 wavelength ground plane antenna, will need to be built to its
: 5/8 wavelength length, and then have the impedance matching circuit
: adjusted so that the SWR is at its lowest, 1 to 1 on the operating
: frequency.

: After the SWR is tuned for a min, then the field strength tests can
: begin.

But adjusting the matching circuit changes the resonant frequency.
SWR is a very rough starting point only. An antenna bridge or noise
bridge, combined with a field strength meter, would be far better.

Mike Bleiweiss <mbleiweiss@laurelholdings.com> wrote:
:> You say that you took the antenna off the mast. The mast acts as a
: ground
:> plane and can mess up the SWR.

: When it was on the mast I had it completely insulated from the mast. I used
: nylon guy wires, and the bottom of the mast was PVC. So the antenna never
: really had a ground before - but it still got 1.2 swr.

A mast will not "act as a ground plane". However, some antennas need the
mast to be grounded.

:> Try running a ground wire from the base of
:> the antenna to a 4 to 6 foot copper ground spike and see if that helps.

: I'll try that... but the antenna is about 10' off the ground. Would the
: ground wire be too long?

Does the antenna have ground radials? If not, then the antenna can have
quite a varied load point impedance - depending on how high it is mounted
above the ground.

:> Make
:> sure that the antenna is clear of all obstructions by at least 10 to 30
:> feet, (i.e.. siding, coax, power lines and roofing materials).

: It's about 6' from the house, which has aluminum siding. Also, the coax
: runs up the siding.

The mounting position is most likely your problem. The coax running up the
siding is no real problem. But you might be getting currents on the outside
of the coax, which is undesireable. They can be minimized with a choke
balun.

:> Remember that
:> the bottom of the antenna radiates more then the top on an A99 so keep the
:> bottom clear and away from the house.

: Bottom of the antenna mounts on the metal rail that goes around the deck.
: (its insulated from the rail, though)
: Woo hoo, I'm batting a thousand with these "don't do's". :)

Yep.

:> Last take an ohm meter and check to see if the coax is
:> faulty. It sounds like the antenna is radiating but you have some
: reflected
:> power.

: Coax is good. I should just take the whole thing and put it on the roof.

That would be best. With it higher in the air, you will also have a much
better range.

: (load) until the input Impedance of the antenna matches the output Impedance
: of the transmitter.

Close. Make that input impedance of the antenna matches the characteristic
impedance of the coax, and you would be much closer.

For example, let's say you have a transmitter with an output impedance of
50 ohms. The antenna impedance is also 50 ohms. Now, try using 300 ohm
impedance feeder with that transmitter/antenna combination. You would see
a 6:1 VSWR, which most likely the transmitter would not be able to handle.

They may TRY to set some sort of payment schedule based on your current
ABILITY to pay. But if they try to do that, you can convieniently add
that you will just as quickly quit your job and go on welfare. The only
legal agencies that can attach your wages are tax agencies and child
support. Then what? It is usually much more trouble to force more money
out of someone than they willingly give up. And as long as something is
being paid, you can't be cited for failing to abide by the court ruling.

Dave

What if the neighbor will accept no action other than the complete cessation of all radio transmissions?

My point, which you seemed to miss as well, is that there are factors outside of the radio op's control, which can contribute to interference. The only thing that the radio op CAN do is ensure that HIS equipment is installed and operated legally, and in a manner which provides for the least amount of radiated emissions (Which can include alternate anteaan placement)

>A RESPONSIBLE radio
> operator will run his set in such a way as to not cause interference to

> occur in "cheap" electronics (like the upstairs neighbor's cheap $8
> telephone that my Cobra 2000 was "interfering" with. A $0.19 ferrite
> ring fixed the problem, and I sprung for it).

A bad move IMHO. If you "tinker" with neighbor's equipment in an effort to minimize interference, and then sometime in the future, something happens to it, they will hold you responsible, even if the failure is totally unrelated. Many non-techies, have some really far-out concepts WRT electronic gear and how it all works. The fact that you installed a ferrite bead must have caused the "electic" to "go bad", and make the thing fail. I'm not kidding! I've heard some really wild stories.

I'm not against offering to pay for filters, I will not open up the case of any equipment however. And if they want to elicit the "help" of the local "TV repairman" to help out, it's on their nickel.

>If the interference is due
> to front-end overload, it's the owner of the equipment that's getting
> the interference's responsibility to fix the problem. If the station is
> causing other interference, it's the station operator's responsibility
> to remedy the situation.

That makes sense, but try explaining that to a neighbor that can't get past the "You're causing interference" part. Do you think that they'll

accept your explaination of the problem? They MIGHT listen to a non-partial "official" looking third party, but who can that be? And who pays?

> So I stand by my statement. RESPONSIBLE operation of a radio transceiver
> will not cause interference.

If you want to spin this, you can make that statement but in the real world, it's not so black and white, since many factors are out of the op's control.

That's the point. Maybe someday he will realize that he gets picked on

"Arrogance. I surely do not believe I am being "picked on". I know why Dogie tries to be me and cry for my attention. I know why Kari and Leland tried their hand at a game they aren't very good at. What I am still waiting for, long before you deserve any thing else from me, is to explain just once why you said I brought you into this when I clearly made a liar of you. You brought yourself in, which opened you up to the same allegations that were thrown my way. What's the matter? You sound guilty. Do you see me posting everyday begging chickenhawk to post "proof" of what he says? No."

because he enjoys responding to posts like this. In the meantime, I'm gonna have some fun.

"Go for it, big boy. And don't forget to sleep ponce in awhile. It is an obsession. Funny the effect I can have on all three of you girls with just a few posts per day."

Go ahead and killfile me for now -- I'll start posting normal stuff again when he starts showing some intelligence and decides to leave those idiots alone.

"Pat yourself on your torn big white undies...not. Obviously you need an education. Too bad you will never attain it."

4940. Value of Johnson Messenger 123A

Newsgroup: rec.radio.cb
Date: 2001-04-20 13:28:24 UTC
From: ARS--KC8BCR@webtv.net
Message-ID: <28260-3AE03978-20@storefull-134.iap.bryant.webtv.net>
Source record: 79415

I just picked up a Johnson Messenger 123A at a garage sale. Original box, manuals, even the original receipt from Christmas Eve, 1976. It's in very good condition, although the owner decided to engrave his Soc. # on the case and drill a couple of holes to install one of these mobile lock mounts. Also has low modulation, although that might just be a loose or disconnected mike wire. Receive is excellent.

I have no idea what this might be worth. And I really don't want to fool around with E-bay. Any Johnson collectors out there that might be interested in this? If it really isn't worth all that much, I might just stick it in the old Dodge.

Thanks for any help or advice.

73, Bill

Hey n8, or whoever you are I really don't care, enough with all this multiple posting and anti keyklown stuff already. We are all still on the airwaves, nothing you can say here will stop that. Especially when you use this "twisting everyone elses posts around" method. Everytime the "skip is rollin" i hear tons of guys out there probably all running some pretty good power. If you REALLY wanted to make a change I think that a more intellegent approach would serve you better. At any rate....have fun my man...

Take the bottom cover off the 1729 and look at the bottom of the ant
with the coax cable/connector facing you. Find the 5th tuning capacitor
(small screw driver adjustment) counting from the coax cable in a
counter-clockwise direction. This capacitor (C8) tunes the lowest band
30-33mhz
on the antenna and will probably allow you to match the antenna at
27mhz. You will need to have the whip attached and preferably mount the
antenna on the vehicle. If not mounted, tune the antenna on a wooden
ladder, away from any large metal objects. This antenna does not require
a ground plane.
Use your CB and an SWR meter to tune the antenna. Hope this helps.

That isn't always true, a station operating legally in all aspects can still cause interference due to the inability of the device being interfered with to reject the signal. I guess your statement would be true if what you mean by 'responsible operation' you shut the station down if any interference occurs even if the interference is the fault of the device being interfered with.

Who cares? You live in Michigan and Twisty's in Florida.
He "claims" he lives there, but who knows for sure? Besides I know many people who live in both Michigan during the summer, and Florida during the winter. And on a final note Twisted feels free to make allegations about other people, then wants them to prove otherwise. So the present issue is no different, he just got the tables turned on him so he knows what it's like to be on the receiving end. If he doesn't like it, then he can knock off his crap. He's so screwed up right now he has no idea whose spoofing him so he just tries to shoot everybody. Some people are not going to let him slide by with that kind of action.

>What if the neighbor will accept no action other than the complete
>cessation of all radio transmissions?

There was an Amateur somewhere on the east coast (I remember reading this in QST or CQ) that had a similar problem. He even offered, IN COURT, to pick up the complete cost of the "aggrieved" persons cable or satellite bill, yet this person sucessfully argued that he only wanted to get direct local TV service dspite being a long way off from any TV station.

On the other hand there was a California 11 meter op that did the same ting, and his neighbor refused. The judge allegedly said he wished HE was the "aggrieved" person cuz he'd jump at free satellite service and told the complaintant to grin and bare it.

You really ahve to be obnoxious to interfere with most TV's and stereos anymore, REGARDLESS of which radio service youa re in, but excessive power, excessive modulation and "tweaked" radios will do it almost every time.

Following everyone's advice and help, I cut down the antenna and stuck it on my roof on one of those roof-mount antenna jiggers. I ran the coax down into the attic to the radio, and now my SWR is back to 1.2. Must've been a combination of interference from the rails, the siding, having a parallel coax run, having the radio above the antenna, and all of the other stuff I did wrong. :)

Thanks again, guys.

Twisted, that's a stretch at best. Clark County? That's 300 miles away
and on the other side of the state! There is a mountain range and a
desert inbetween! You call that "local"? As usual, your arguments are
not founded on anything more than your suspicions, and certainly not
on logic. Besides, I said you need to prove that Leland lives in the
same state, not anybody else. You will have to do much better than
that.

So when are you going to back up your crap and prove:

1) that I am Leland (and Big Ben, for that matter);
2) that I am a liar;
3) that I post porn;
4) that I am part of a conspiracy;
5) that I defend anyone else for posting porn or profanity;
6) that I have accused you of child molestation;
7) that I have accused you of homosexuality;
....and since you are so fond of changing the gender of myself and
others you don't like,
8) that I am a girl.

>who, Sparky? Who is that? Why, it's the same person y'all put so much
>belief in what he says. That and your trolls are always together."
>You can try to back that one up anytime you think you can. It should be
>very entertaining.
>=A0=A0
>"Already have.

Where?

>Porn poster refers to you and dogie and kari and leland
>on a few separate occasions,

When did I ever post porn?

> stating you all share the same beliefs

Just because I'm an outspoken opponent of illegal radio operation,
that makes me guilty of posting porn? That will make wonderful fodder

for a future post.

> and
>to email him.

And please explain, for everyone's benefit, just how you can tell when
anyone emails anyone else.

> Again, did he lie?

I don't know, I don't care, and that post had nothing to do with you
anyway.

> How do you decide what posts he makes
>to believe?"

I don't care what he does, as long as he doesn't shovel his crap in my
direction like you are doing.

>anyone else against anyone. You did this all by your little lonesome.
>The only one you can blame is yourself,
>"Thanks for demonstrating YOUR ignorance of the subject. Only I don't
>think it's ignorance on your behalf. I believe it is malice with intent
>on you, Leland, and our soon to be famous wonderhawk's behalf."
>Identity problem again.

No response. I'm still waiting for you to prove to me that I'm
somebody else.

>=A0=A0but I guess that's too much truth for you to swallow. Screwups?
>Where? You kept saying that I lied, but you haven't found one yet.
>Where's the lie, Twisted?
>Why no reply to this? Where's the lie, Twisted?

No response again. I keep asking but I keep getting no response.
Where's the lie, Twisted?

>Once again I ask: Where are the lies?
>"I showed you many.

You showed my some of your deluded opinions based on your assumption
that I am Leland. Where are the lies?

> You too, also intentionally and incorrectly
>attributed forges as authentic posts.
>Where and when? The forges you made or somebody else?
>
>"Another lie. Please post one single forge from me complete with
>headers.

If you didn't forge any posts, fine. But answer the questions, where
did I attribute a forge as an authentic post?

> You were doing so well and then succumbed to the arrogance,
>intentionally attempting to perpetuate that lie, like leland did in the

>hammie forum."

Interesting, now Leland is someone else. Make up your mind, am I
Leland or Sparky?

BTW, I'm still waiting for you to back up all the crap you have spewed
so far:

1) that I am Leland;
2) that I am a liar;
3) that I post porn;
4) that I am part of a conspiracy;
5) that I defend anyone else for posting porn or profanity;

Proof, man, post some proof. I have backed up everything you wanted me
to back up so far, now it's your turn.

>=A0=A0You claimed a case in Wash that
>you cannot prove. Another lie.
>Sorry, you lose again. Where's the lie, Twisted?

No response. You said you would admit when you are wrong, so what are
you waiting for?

>=A0=A0you stated you have nothing to do with
>these clowns, you lied.
>I don't, other than the common denominator -- Twistedhed. Didn't you
>ever wonder why it is only you I am picking on?
>
>"No. Never wondered. I know why. You are a troll. Interesting you
>consider scratching your backside and sniffing your claw as "picking on
>me. I never looked at it that way at all. I also find it funny how you
>girls peruse my old posts, reaching for anything you can. I remember
>several instances of your arrogance getting your beak slapped by others
>long before you "picked on me." Property laws? hahahah!. You are
>reaching.....trolling.....All of yours were sent to me. I figured,
>judging by the frequency and arrogance in your posts, you know, begging
>for a new group, etc., that you were another loser like those mentioned.
>And guess what? I was right."

But why only you, Twisted? Because you keep begging for it. You keep
coming back for more. Do you really think it will stop? It's very
simple -- you leave me alone and I'll leave you alone. I'm still
willing to live by that rule, but you sure don't seem interested in
leaving anything alone, you just keep pushing. And now that I'm
pushing back you complain that much more.

How long this goes on is up to you. And like I said before, you can't
blame anyone else but yourself. Or did you forget about "taking
responsibility for your own actions"?

>And why the keyklown gang has you listed as PE#1? Do you think they just
>picked you at random?

>
>"Of course not. Look at the pattern. Anyone who dares speak a point of
>view different than theirs, are brow beat, called names, ridiculous
>accusations, same thing they did to me. Only I didn't curl up and go
>away like they are so used to. They are bullies and bullies always self
>destruct."

So your pride got a little hurt. Stick a band-aid on it and move on.
Take the example from others in the newsgroup. Call it what you want,
but at least they are smart enough to know that N8's posts mean
nothing, and mature enough to walk away from a bully picking a fight.
Are you so stupid to think that you can win a fight in a newsgroup?

>Or could it be something else? Hmm... something for you to think about.
>=A0=A0Or, did the guy posting as Punisha lie when he refers to all you
>in one sentence repeatedly?
>I don't know if he lied or not. The post was requesting several people
>to email him, that's all. I didn't, and I didn't when he asked me to
>email him more recently. If there is any conspirisy, I'm not part of it,
>and that is something you need to get through your thick skull.

No response.

>You were all in on a game
>and were caught, and now, like little children, you deny it all. even
>when confronted with evidence of your own makings, eh clown punisha?"
>What evidence, Twisted? There isn't any, for pete's sake.
>
>"You can say whatever you please, you always do,

So do you, BHAD. Back to the question, What evidence?

> which is why we are
>having a conversation that had nothing to do with you in the first place
>until you stuck your beak in. Now you are trying to turn it around like
>lean and kari tried to do, only it backfired on both of them too."

"He started it!"
"NO, HE started it!"
"Uh-uh! He started it!"

> Turn up your cerebral cortex and read the posts for what they say, not
>for what that little voice in your head says.
>
>"That little voice is instinct, which has become finely honed over the
>years. Too bad it has nothing to do with you girls trolling together."

<quote snipped>
"Let's see now, you wouldn't happen to be BigBen now would you Sparky?
Both of you in Washington,

Both of us and a few million others.

"Sorry. Few million others don't post here."

  both of you quoting this, both of you dealing with the same trolls
repeatedly (always an unknown's post), both of you having to cite proof
(arrogance) to substantiate your claim? Hell no, it couldn't be you,
cause I asked and you told me, correct? Just another in one hell of a
looooong line of coincidences."

Twisted, that's a stretch at best

"No, it's not. Actually, everything I have reiterated has been real
close, if not dead on. So you and Leland MAY not be the same person.
That doesn't absolve you from your guilt, trolling, and lies."

Clark County? That's 300 miles away and on the other side of the state!
There is a mountain range and a desert inbetween! You call that "local"?

"Your word isn't very valuable except to your pink cohorts. Your trolls
back with the "community keyclown" program with Voobner saw to that. You
folks are probably the same clowns that cause trash on the airwaves."

As usual, your arguments are not founded on anything more than your
suspicions, and certainly not on logic.

"Nah. I have been saying all along, just a few hundred mere coincidental
posts by you girls, nothing more."

Besides, I said you need

"That is part of your problem. The only thing I NEED, thankyouverymuch,
is to continue mocking you when you think you are fooling someone."

  to prove that Leland lives in the same state, not anybody else.
You will have to do much better than that.

"See above."

So when are you going to back up your crap and prove:
1) that I am Leland

"See above."

(and Big Ben, for that matter);

"i just post the obvious coincidences. I don't need to convince the group of anything (unlike you), they can make up their own minds."

2) that I am a liar;

"Again? I thought I did that with you saying I forged! I also did it when you said I brought you in to this mess. I showed you not only stuck your beak in THIS mess, but have a history of jumping in, attacking someone, and then accusing them of starting with you. You are a few cards shy of a full deck, aren't you?"

3) that I post porn;

"If not guilty directly, then by association, and THAT I showed."

4) that I am part of a conspiracy;

From: twistedhed@webtv.net (Twistedhed)
On Tue, 03 Apr 2001 15:29:13 -0400, Punisher Of KeyClowns <punisha-no-spam@cotse.com> wrote:
I have agreed to help coordinate several similar >anti-keyclown factions in this newsgroup.
Kari, Doug, AntiKey, Leland, Sparky and others, please >email me at this address. Kari has new info on some of the >illegal businessmen in the 'rec-radio-cb' group and we need >to coordinate formal complaints to yahoo regarding these.
Kari, Doug, Leland, and Sparky.

"Hmmmm. Several, (meaning more than one, like you, Kari, Leland, Dogie) coordinated (meaning carefully planned, organize, etc.) anti-keyclown factions in this group. I don't think even you can deny that would qualify as a conspiracy....unless you are as skilled a liar as Leland."

5) that I defend anyone else for posting porn or profanity;

"You ran to the pink ladies defense when I was lumping them up. Stuck your beak right in there, ya' sure did."

6) that I have accused you of child molestation;
7) that I have accused you of homosexuality;
...and since you are so fond of changing the gender of myself and others you don't like,

"The above tickles you to say, so I'll let you keep those so you still have something to chew on."

8) that I am a girl.

"My apologies. You just wish you were."

Sparky, FLCD

I don't know, I don't care, and that post had nothing to do with you anyway.

"And neither did the one where you stuck you beak in when I was lumoing up your girlfriends."

I don't care what he does, as long as he doesn't shovel his crap in my direction like you are doing.

"Another lie by you Sparkles. Remember, YOU put yourself in this discussion. I even told you to mind your business but if you wanted, come get some. You chose the latter, so quit crying like a school marm. I am not shoveling it toward you sparkless, I am shoveling it BACK. GET IT RIGHT! Lies are so second nature to you pervs that y'all don't even realize when you do it. You probably talk yourself into believing your own lies."

anyone else against anyone. You did this all by your little lonesome. The only one you can blame is yourself,

"Thanks for demonstrating YOUR ignorance of the subject. Only I don't think it's ignorance on your behalf. I believe it is malice with intent on you, Leland, and our soon to be famous wonderhawk's behalf."

Identity problem again.
No response. I'm still waiting for you to prove to me that I'm somebody else.

"As I say, I post the obvious coincidences, I don't have to prove anything to anybody. Matter of fact, going by your girlfriends Lean's logic, you are guilty until you prove yourself innocent. Good thing her beliefs aren't law, eh?"

  You too, also intentionally and incorrectly attributed forges as authentic posts.

Where and when?
The forges you made or somebody else?

"Another lie. Please post one single forge from me complete with headers.

If you didn't forge any posts, fine.

"And that was your second lie, er, mistake. The first was sticking your beak in."

  You were doing so well and then succumbed to the arrogance, intentionally attempting to perpetuate that lie, like leland did in the hammie forum."
Interesting, now Leland is someone else. Make up your mind, am I Leland or Sparky?

"What difference does it make? Everyone I have accused of multiposting is guilty as sin. You included. I have effectively shown what I intended, the only thing left is for the guilty to scream the loudest and profess their innocence. Save your breath. Your questions bore me and you aren't even a quality troll. You sound like you have an over

abundance of prolactin in your genetic code."

Ratty O' Shack comic episode # 2 (To the city)
Meet Probot.. the trusty robo side kick.
Episode # 2 now showing for your viewing pleasure at:
http://www.RattyOShack.com

Ratty O' Shack is my comic strip about an alien from the planet "Teck-nul-ogie", who arrives here on earth thinking he has cloned himself to look like a human.. only to find his physical replicator device didn't do such a good job. He must now fit in with human kind until he can return home... but before that, he must survive using his superior brain power and anything else... such as pure luck... to get him through each day. Follow his Adventures, which should prove.. very interesting.

Gee, what are the possibilities that two people post from the same
state? Are they so high that it must mean they are the same person?
Well then I guess everyone that has posted from Florida must be you,
huh? Learn some statistics. If I remember right, out of any random
group of 32 people (I think it's 32, but it's something close to 30),
the chances are 50% that two people will have the same birthday. And
since a birthday is 1 out of 365, and since a few hundred different
people have posted here in the past year, you think two from the same
state is such a rare occurance that the mere coincidence of it is
proof of multiple identities? Idiot.

>=A0=A0both of you quoting this, both of you dealing with the same trolls
>repeatedly (always an unknown's post), both of you having to cite proof
>(arrogance) to substantiate your claim? Hell no, it couldn't be you,
>cause I asked and you told me, correct? Just another in one hell of a
>loooong line of coincidences."
>
>Twisted, that's a stretch at best
>
>"No, it's not. Actually, everything I have reiterated has been real
>close, if not dead on......

have said would agree with me.

> So you and Leland MAY not be the same person.

Duh...

>That doesn't absolve you from your guilt, trolling, and lies."

I'm just trolling you, dear Twisted. It's easy because you always
respond to the trolling, but never the legitimate questions. The lies
are what you are doing to yourself, by ignoring your common sense,

better judgment, and logic.

>Clark County? That's 300 miles away and on the other side of the state!
>There is a mountain range and a desert inbetween! You call that "local"?
>
>"Your word isn't very valuable except to your pink cohorts. Your trolls
>back with the "community keyclown" program with Voobner saw to that. You
>folks are probably the same clowns that cause trash on the airwaves."

Stop trying to divert attention and answer the question. Do you
consider 300 miles through mountains and desert to be "local"?

>As usual, your arguments are not founded on anything more than your
>suspicions, and certainly not on logic.
>
>"Nah. I have been saying all along, just a few hundred mere coincidental
>posts by you girls, nothing more."

Where's the logic, Twisted? Coincidences happen every day, and you can
post as many as you like, but you haven't shown any causal
relationship. Just because two kids jump into the same swimming pool,
does that make them guilty of collusion? Even YOU aren't THAT stupid
(I would hope).

>Besides, I said you need
>
>"That is part of your problem. The only thing I NEED, thankyouverymuch,
>is to continue mocking you when you think you are fooling someone."

Another failed diversion.

>=A0=A0to prove that Leland lives in the same state, not anybody else.
>You will have to do much better than that.
>
>"See above."

See above.

>So when are you going to back up your crap and prove:
>1) that I am Leland
>
>"See above."

One minute you say I'm Leland, then you turn around and say I'm not.
Hmm... I have said this before, but there was no response. Doesn't
matter, you haven't proven squat anyway.

>=A0=A0(and Big Ben, for that matter);
>
>"i just post the obvious coincidences. I don't need to convince the
>group of anything (unlike you), they can make up their own minds."

Your statement is moot since everyone else quit reading your posts
long ago.

>2) that I am a liar;
>
>"Again? I thought I did that with you saying I forged! I also did it
>when you said I brought you in to this mess. I showed you not only stuck
>your beak in THIS mess, but have a history of jumping in, attacking
>someone, and then accusing them of starting with you. You are a few
>cards shy of a full deck, aren't you?"

See below.

>3) that I post porn;
>
>"If not guilty directly, then by association, and THAT I showed."

Not only is guilt by association a lame argument, but you still
haven't proved any association.

>4) that I am part of a conspiracy;

Oboy, I knew you would post this again. Let's look at this together,
shall we?

>From: twistedhed@webtv.net (Twistedhed)

>Kari, Doug, Leland, and Sparky.

He didn't say "Twistedhed", he said "illegal businessmen". And then
you write "you not only stuck your beak in THIS mess, but have a
history of jumping in, attacking someone, and then accusing them of
starting with you." Pot, kettle, black.

>"Hmmmm. Several, (meaning more than one, like you, Kari, Leland, Dogie)
>coordinated (meaning carefully planned, organize, etc.) anti-keyclown
>factions in this group. I don't think even you can deny that would
>qualify as a conspiracy....unless you are as skilled a liar as Leland."

Whoever posted it, he wrote what he wanted you to hear. You can't even
tell when you chain is being yanked. BTW, why didn't you post my
response to that post? Does it conflict with your delusions of a
conspiricy?

>5) that I defend anyone else for posting porn or profanity;
>
>"You ran to the pink ladies defense when I was lumping them up. Stuck
>your beak right in there, ya' sure did."

Just how does one run interference on a newsgroup? By diverting attention away from the subject? You are very good at that, but not that good. Feel free to respond to their posts as you see fit, I don't care. Like I said, I don't defend them at all.

>6) that I have accused you of child molestation;

I haven't.

>7) that I have accused you of homosexuality;

I haven't.

>...and since you are so fond of changing the gender of myself and
>others you don't like,
>
>"The above tickles you to say, so I'll let you keep those so you still
>have something to chew on."

Another failed diversion.

>8) that I am a girl.

I understand why you snipped some things, but why did you snip this?

>>Which is another reason I make this my business, because you seem to use
>>the same crap they do against me, when I have never posted anything like

>>they did. You won't see porn or profanity at my website.

>No response. Why didn't you accuse me of lying here, Twisted?

Still no response. And you snipped this:

>>Truth? The truth is that I'm not Leland, and I am not in any conspirisy
>>with
>>"Yea , yae, we know. Just like Kari denied having anything to do with
>>you guys, but your names are used in the same sentence many times by
>>who, Sparky? Who is that? Why, it's the same person y'all put so much
>>belief in what he says. That and your trolls are always together."
>>You can try to back that one up anytime you think you can. It should be
>>very entertaining.
>>=A0=A0
>>"Already have.

>Where?

You have tried and failed, and I was right -- it was entertaining.
Here's more you snipped:

>Just because I'm an outspoken opponent of illegal radio operation,
>that makes me guilty of posting porn? That will make wonderful fodder
>for a future post.

Where's the logic, Twisted? And for even more you snipped:

>> and
>>to email him.

>And please explain, for everyone's benefit, just how you can tell when
>anyone emails anyone else.

If you could, then you might have proof of a conspiricy.

>Identity problem again.
>No response. I'm still waiting for you to prove to me that I'm somebody
>else.
>
>"As I say, I post the obvious coincidences, I don't have to prove
>anything to anybody. Matter of fact, going by your girlfriends Lean's
>logic, you are guilty until you prove yourself innocent. Good thing her
>beliefs aren't law, eh?"

Do you use Leland's logic? I sure don't. But if you are going to say
it, then you should be able to back it up. Ooops, I forgot, you are
stuck with this hide-behind-the-keyboard-and/or-mic mentality.

>=A0=A0You too, also intentionally and incorrectly attributed forges as
>authentic posts.
>
>Where and when?
> The forges you made or somebody else?

>"Another lie. Please post one single forge from me complete with
>headers.

It looked to me like a question, not a statement. A loaded question,
albeit, but I'm suprised you couldn't tell the difference. Ok, I'm not
suprised, considering your other delusional behavior.

>If you didn't forge any posts, fine.
>
>"And that was your second lie, er, mistake. The first was sticking your
>beak in."

And here you go again with your selective snipping.

>If you didn't forge any posts, fine. But answer the questions, where
>did I attribute a forge as an authentic post?

Well?

>=A0=A0You were doing so well and then succumbed to the arrogance,
>intentionally attempting to perpetuate that lie, like leland did in the
>hammie forum."
>Interesting, now Leland is someone else. Make up your mind, am I Leland
>or Sparky?
>
>"What difference does it make? Everyone I have accused of multiposting
>is guilty as sin.

HAHAHA!!!! ROTFLMFAOUIP!!! Twistedhed the omniscient!!! If you say so,
then it MUST be true. Now it comes out -- you believe whatever you
want regardless of the facts! Twisted, your'e a trip!

> You included. I have effectively shown what I
>intended, the only thing left is for the guilty to scream the loudest
>and profess their innocence. Save your breath. Your questions bore me
>and you aren't even a quality troll. You sound like you have an over
>abundance of prolactin in your genetic code."

Twisted, you have been screaming for months and almost the entire
group is sick of it. You just keep fanning the flames. But wait! If
you order now you can see more of Twisted's selective snipping
techniques (you snipped half the post!)

>Proof, man, post some proof. I have backed up everything you wanted me
>to back up so far, now it's your turn.

Still waiting.

>>=A0=A0You claimed a case in Wash that
>>you cannot prove. Another lie.
>>Sorry, you lose again. Where's the lie, Twisted?

>No response. You said you would admit when you are wrong, so what are
>you waiting for?

Still waiting.

>>=A0=A0you stated you have nothing to do with
>>these clowns, you lied.
>>I don't, other than the common denominator -- Twistedhed. Didn't you
>>ever wonder why it is only you I am picking on?
>>
>>"No. Never wondered. I know why. You are a troll. Interesting you
>>consider scratching your backside and sniffing your claw as "picking on
>>me. I never looked at it that way at all. I also find it funny how you
>>girls peruse my old posts, reaching for anything you can. I remember
>>several instances of your arrogance getting your beak slapped by others
>>long before you "picked on me." Property laws? hahahah!. You are
>>reaching.....trolling.....All of yours were sent to me. I figured,
>>judging by the frequency and arrogance in your posts, you know, begging
>>for a new group, etc., that you were another loser like those mentioned.
>>And guess what? I was right."

>But why only you, Twisted? Because you keep begging for it. You keep
>coming back for more. Do you really think it will stop? It's very
>simple -- you leave me alone and I'll leave you alone. I'm still
>willing to live by that rule, but you sure don't seem interested in
>leaving anything alone, you just keep pushing. And now that I'm
>pushing back you complain that much more.

You almost plagiarized this with one of your more recent posts.

>How long this goes on is up to you. And like I said before, you can't
>blame anyone else but yourself. Or did you forget about "taking
>responsibility for your own actions"?

I guess you did forget.

>>And why the keyklown gang has you listed as PE#1? Do you think they just
>>picked you at random?
>>
>>"Of course not. Look at the pattern. Anyone who dares speak a point of

In the past year Twistedhed has made dozens of posts defending illegal CB operators, saying that nobody is guilty until guilt is proven. Some of his posts accuse others of hypocrisy.

Then he posts this:

>"What difference does it make? Everyone I have accused of multiposting
>is guilty as sin.

Do as you say, not as you do?
Physician, heal thyself?
Rules for thee but not for me?

What a goddam hypocrite you are, Twisted.

>
> Thanks
>
> Tim

Skip can occur from two layers of the ionosphere labeled E and F according to height. When these layers are not energized, skywave signals simply penetrate and are lost. Under the right conditions, they act as mirrors.

The most understood is F-layer propagation which is strongly influenced by sunspot activity and to a lesser extent sunlight itself. These run in 22 year cycles, two 11 year sub-cycles on the sun's northern and southern hemispheres respectively. We are right over the peak of the latest cycle so the maximum frequency that the F-layer reflects over a given path is higher than it will be in a few years. This MUF (Maximum Usable Frequency) will go below the 14 MHz ham band at the trough so CB will be enjoying F-layer propagation for perhaps 3-4 years out of the 11 year cycle. It is the F layer that accounts for the really long-haul communication.

The all-time high sunspot and MUF numbers were reached in 1958-59 cycle. The guys who really knew and were paid to forecast solar activity worked for RCA Globecom, Cable and Wireless, and various private companies who now use cables and satellites if they are in business at all. They weren't telling and are quite dead these days so forecasting is not as easy as it once was.

Somewhat related but not closely is what you experienced, I suspect, called 'Sporadic E' which is a neat name covering a general lack of knowledge. It tends to affect most strongly the 20-70 MHz range of which CB is a part but can get other freqs as well. This can occur any time but is most likely to be near the solstices in June and December. Because the E layer is lower, skip distances are shorter -- about the range you describe is typical. They do tend to be more frequent in high solar activity times but can occur anytime. From the Omaha area where I live, the most common E activity is from Pennsylvania around to Texas but I did manage Worked All States on the 50 MHz band.

One of life's major frustrations is to be right under the mirror, hear everybody, and be unable to work any of it. A rare event but it does

happen, particularly on the 21 MHz band.

One of the nice things about both is that they really require little power to work effectively. When the spots are high you can work the world on 5 watts and 50 makes it duck soup. When the propagation gods are not with you, 50kw is not enough. If you do any SWLing you notice that the 17 and 21 MHz bands are used at the top of the cycle and more in the summer (skeds change with DST) because higher freqs offer more range for less power.

Make any sense??

Do we have to go through this again?

1) You posted BS.
2) I proved you wrong.
3) You couldn't accept proof.
4) You trolled my posts for over a month.
5) I ignored your trolls for over a month.
6) One day I jumped down your throat.
7) You put ME in YOUR killfile (or so you said).

Did I miss anything? I consider it a public service to frustrate people that spew BS and can't accept facts, people just like Twisted and yourself. It is also a very rewarding hobby.

Hi guys,

I didn't post the following article to cause trouble, but I just wanted to see if anyone else had heard about it. It's only a couple days old, but I thought someone else might've heard of it. I got it off another newsgripe, but it also had a link to fcc to obtain it. Seems awfully high to me! Or could it have been because he did not respond? Maybe someone "faked" this post and I fell for it?? Nowadays, it's getting so a fella can't tell what to believe anymore.

73

Jerry

FORFEITURE ORDER

Adopted: April 18, 2001 Released: April 20, 2001

By the Chief, Enforcement Bureau:

1. In this Forfeiture Order ("Order"), we issue a monetary forfeiture in the amount of thirteen thousand five hundred dollars ($13,500) to Jerry Smith for willful and repeated violations of Sections 95.409(a), 95.410(a) and 95.411(a)(1) of the Commission's Rules ("Rules"). The noted violations involve Mr. Smith's operation of a Citizens Band ("CB") Radio Station with a non-type-accepted transmitter, with a transmitter output power greater than four watts carrier power in the AM (A3) mode, and with an external RF power amplifier.

2. On January 8, 2001, the Commission's Philadelphia, Pennsylvania Field Office issued a Notice of Apparent Liability for Forfeiture ("NAL") in the amount of thirteen thousand five hundred dollars ($13,500) to Mr. Smith for the noted violations. Mr. Smith has not filed a response. Based on the information before us, we affirm this forfeiture.

3. Accordingly, IT IS ORDERED that, pursuant to Section 503(b) of the Communications Act of 1934, as amended ("Act"), and Sections 0.111, 0.311 and 1.80(f)(4) of the Rules,4 Jerry Smith IS LIABLE FOR A MONETARY FORFEITURE in the amount of thirteen thousand dollars ($13,500) for operating a CB Radio Station with a non-type-accepted transmitter, with a transmitter output power greater than four watts carrier power in the

AM (A3) mode, and with an external RF power amplifier, in willful and repeated violation of Sections 95.409(a), 95.410(a) and 95.411(a)(1) of the Rules.

People without THE HANDICAP OF BEING A TWISTIEMOLESTERCHICKENHAWKBOY LIKE ME AND WITHOUT SEXUAL impairment can GIVE headers TO hundreds of TRUCKERS per minute and can pick THEIR BOOGERS AT THE SAME TIME. the meaningful SATISFACTION OF HAVING A TRUCKER CUM IN MY MOUTH IS SEVERLY RESTRICTED BY MY HANDICAPS. QRM, please convey this in any way you feel appropriate. I am requesting that you TELL TRUCK DRIVERS TO LOOK ME UP IN THE PHONE BOOK UNDER "BIGGEST COCKSUKKA IN FLORIDA". I won't give my identity because I AM A FAGGOT CUNT LIPPED QUEERBOY PIECE OF FERMENTED EQUINE DEFECATION THAT TRIES UNSUCCESSFULLY TO ACT LIKE A HUMAN BEING! I don't want anyone feeling sorry for me, BECAUSE I AM THE EMBODIMENT OF A SORRY ASSED MOTHERFUCKER FAG CHICKENHAWKBOY, AND I ENJOY THE CHANCES I GET TO SUCK TRUCK DRIVERS' COCKS BEACUSE OF IT! But any consideration FROM MEAN HAMMIES LIKE VOOBNER, LELAND, N8, KARI, SPARKY, and ALL THE OTHERS WHO DESPISE SOCIALLY ABERRANT FAG ASSED DOG COCK LICKING HUNKS OF USELESS PROTOPLASM LIKE ME, will be greatly appreciated, BECAUSE I KNOW I AM AN INCESTUOUS MOLESTING HUNK OF WHITE NIGGER TRASH FIT ONLY FOR BEING SHOT, WHICH IN AND OF ITSELF WOULD BE A GROSS WASTE OF A SHOTGUN SHELL.. I'm sure there are others with reduced or no CAPACITY TO BE A HUMAN BEING, LIKE MY CHILD MOLESTING CRIMAINAL FAGGOT ASS, since I have SUCKED OFF sexually-impaired people on the CB radio several thousand times every week. With the price of MALE PROSTITUTES dropping, I'm sure more and more folks are READY TO purchase them to expand their GAY SEXUAL world, INSTEAD OF LETTING ME SUCK THEM OFF FOR FREE, SINCE IT IS EXTREMELY LIKELY, DUE TO MY HYPERFAGUAL ACTIVITY, THAT I HAVE SOME VIRULENT FORM OF SEXUALLY TRANSMITTED DISEASE. WHY JUST LAST MONTH I FUCKED MY 9 YEAR OLD NEPHEW, AND NOW HE HAS GREEN SHIT GROWING OUTTA HIS ASSHOLE AND NOSTRILS...I HAVE NOT YET TOLD HIS DADDY, AND I HOPE NEPHEW CHICKENHAWKBOYTOBE DOESN'T RAT ME OUT! HIS DADDY WOULD BE ONE JEALOUS MOTHERFUCKER IF HE FOUND OUT! By the way, you would
laugh if you heard HOW I SOUND GURGLING ON TRUCK DRIVERS' CUMSHOTS! OH, how your messages GET ME HARD!!! THE
sound....on.....the....computer....generated.....ORGASMS!!
ha ha. I should make a TAPE OF ALL THE TIMES I HAVE DEEPTHROATED MEN, BUT

CURRENTLY AVAILABLE TAPES ARE ONLY 2% LONG ENOUGH TO RECORD EVERY SINGLE HEADJOB! IF I GET ENOUGH MONEY THROUGH PIMPING MY 12 YEAR OLD SON AT KEYDOWNS, I WILL BUY ENOUGH tape and have somebody put it on a web site, IF THEY DON'T GAG WHILE DOING THE HTML.. It's worse than a mis-tuned SSB signal TO LISTEN TO MY 12 YEAR OLD SON SQUEAL AS I PIMP HIM,--but the technology is getting better, I WILL SOON BE ABLE TO SIMULTANEOUSLY PIMP HIM AND FUCK HIM!!! YEEEEEEEEEEHAW!"

Hello & Good Evening Jerry,
Yeah, it's probably right. The idiot most
likely was running power, was warned,
ignored said warning and probably refused
to let the suits into the house to inspect
his station. So with that attitude they send him
the bill, now he'll beg for a hearing date, get it
reduced to couple thousand and be on his
merry way.

The Landshark

Badabing said;

I guess you have no idea what you even post, I'll quote it for you
below, If so what exactly do you mean when you say "everyone wants
strong radios and such" or you say it was much more fun when people were
using more than just there radio which would mean they are using an
amplifier, just like you have/do.

5009. New Evidence: chickiehawk's posts analyzed by professional

Newsgroup: rec.radio.cb
Date: 2001-04-21 14:23:47 UTC
From: twistedhed@webtv.net
Message-ID: <27566-3AE197F3-224@storefull-126.iap.bryant.webtv.net>
Source record: 79482

.not only are the nu8mber of posts by the chickenhawk in direct proportion with the number of times he has been humiliated, but also the number of times he posts are a direct correlation with the degree of inferiority he feels for himself. He degrades others because he cannot handle the way he feels toward himself. He has physically abused several in his world, and the verbal abuse is a substitute for his outrage, selfhatred, and inadequacy he feels toward himself. Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity, among others), resutling in a natural, but deficient and defensive state. His sense of self worth is extremely low, probably due to the fact that the individual in question is unemployed, coupled with rejection and/or sexual and physical abuse as a child, therefore, unproductive by society's normal creed. Social acceptance has always come with a difficult struggle to this individual, although it is extremely important he feel productive in his own mind, even if the actions are to be of negative and negligible impact. An individual blinded by his own actions who has so far removed himself from the reality of the self imposed situation due to pathological and deluded ideas of grandeur, obsessions and paranoias is in need of a licensed, professional, qualified individual to assist with the dilemmas and inner demons that the individual fails to recognize, whether deliberate or unconscious.
This, I did not make up. It came from a qualified individual who puts on self-help clinic seminars around the country and maintains regional columns in certain Knight-Ridder publications on mental health. He is also a fishing guide in Punta Gorda.

5118. Message rules on Outlook Express

Newsgroup: rec.radio.cb
Date: 2001-04-22 02:16:27 UTC
From: Richard McCollum <rmccoll@radiks.net>
Message-ID: <1erE6.1042$W91.544210@nntp3.onemain.com>
Source record: 79642

One of the simpler ways to clean up your reading of this group is to use Message Rules to wipe out anonymous remailers.

The big four are xganon.com, anon.xq.nu,dizum.com, and cotse.com.

When one of these offends thee, click on Message at the top and select Create a Rule.

Click Where the From Line Contains and Delete it.

Click on the blue area to bring up the address and edit it to read the domain you wish to ignore.

Voila!!!

You can put them all in one rule but four is workable. With that and the killfile, peace reigns supreme. It does at least until some toad repeats the drivel in an ill-advised reply.

Dick N�BK

Dick,
Your info is accurate, but what you don't realize is that if you set all the rules you might just think your e-mail isn't working. Do you realize that 95% of the group that is posting is brain dead and 80% of the rest is not too far off? Just check the following post from Dave or Debby!

73 from Rochester, NY
Jim

hmmm.
sounds familiar to my own situation.
However, I set my program to display titles only and to download only if marked for retrieval. it does make life easier, but still....

as for YRAC's commentary following this posting, well....
"it is better to remain foolish and silent, then to open thy mouth and remove all doubt"

guess that about sums it up.

Actually, its rather relevant to the topic of CB radio and
the ongoing abuses by those who won't abide by the rules.

Did a little checking and that one is definitely on the FCC
database...

It serves as a reminder that the FCC is back in the business of enforcing
rules that were created to regulate spectrum. It also serves
to remind US (radio operators all) that those rules were put in place for a

reason.

Two deaf people got married.

During the first week of marriage, they found that they were unable to communicate in the bedroom with the lights out,
since they can't see each other signing, or lips to lip-read.
After several nights of fumbling around and many misunderstandings, the wife figures out a solution.

"Honey, why don't we agree on some simple signals? For instance, at night,if you want to have sex with me,
reach over and squeeze my left breast one time.
If you don't want to have sex, reach over
and squeeze my right breast one time."

The husband thinks this is a great idea.
He suggests to his wife if she wants to have sex with him,
"Reach over and pull on my penis one time. If you don't
want to have sex, pull on my penis two hundred and fifty times.

There is nothing more reliable than for twistedholic or moparhed to repond to a troll-post. What happened? Did you finally get committed? So what 's the problem, moparhed? Too many facts for you to divert? Facts are the enemy of the liar, and you and your alias sure like to avoid them.

Don't forget, by your own twisted logic, your silence is proof of your guilt. But then again, you said something to the effect of: He who complains the loudest is the most guilty. So who is the one that has complained for several months now, twistedholic? And who is the one that tried to divert attention from the facts?

You and your alias are pathetic. If either of you post your BS again I will be all over it, and you better have some logical argument to back it up. Why? Because from now on I start showing your fallacies one by one, and I'll do so in Latin. Why should you care? Because Dougie has proven himself far more literate than you (and far more creative), and you don't want to look like a fool compared to Dougie, do you?

Oops, I goofed again. I forgot you two are masochists and love to be abused (arf?). Hey, call your college buddy and find out what the proper terminology is for a person that seeks persecution to justify his own maligned behavior.

Oops, I forgot again, you dropped out of college. Oh well, whose fault is that? Not mine. But then you might think so because I not only graduated, but also have a post-graduate degree. To you that is a coincidence sufficient to prove collusion.

Stay, go, do what you want. Spew your BS and you will get no peace.

The GOOD Sparky is back, at least until twistedholic starts with his crap again.

That's cool. The truth is, they love the flames, but they hate the
truth. Catch 22. That' why this ng is so messed up. Get rid of the
masochists by force-feeding them the truth, and you will get rid of
the resulting flames.

Of course, moparhed and twistedholic will have different opinions, but
they don't matter since they don't care. And that is why I will ignore
them, just to show them that flames can be ignored, and anybody that
doesn't ignore flaming is a masochist.

My apologies to the ng for the past couple weeks.

I occasionally here bits and pieces of rumors that the FCC has delegated some of their enforcement power to the local police to try to stop blatant misuse of the CB frequencies. Could anyone give me some background on this?

Also, what about shippers and receivers for truckers? Shippers and receivers routinely use CB channels to notify the waiting truckers what dock to back into and where to take their paperwork. I assumed this was illegal (business) use of the CB frequencies but overlooked by the authorities. Will the powers-to-be try to limit their use of these channels?

Appreciate any comments.

Tim

Quite the opposite. The Citizen's band is intended for both personal
and business use. It was not intended to be a "hobby". Congress
recently passed a bill which allows local law enforcement to enact
laws (as they see fit) to enforce FCC restrictions imposed upon the
citizen's band.

It is up to the local law enforcement to pass and enforce their own
laws -- the bill just allowed them to do so. But remember, the bill
didn't release the FCC's authority to enforce the regs.

5163. Homebrew 5/8 wave update

Newsgroup: rec.radio.cb
Date: 2001-04-22 12:58:52 UTC
From: dB <doctorbeltway@hotmail.com>
Message-ID: <gAAE6.24035$JV1.2801085@news1.rdc1.va.home.com>
Source record: 79591

For anybody interested, here's the outcome of the homebrew 5/8 wave antenna project I undertook:

Yesterday, I put it together out of various lengths of aluminum tubing and steel conduit, with a Radio Shack SS 1/4 wave whip for the top section. Total radiator length is about 22-23 feet and is held inside the base section insulated with electrical tape. Added the recommended ground planes in the form of two 17 foot sections of copper pipe held at the center with opposing brackets. I used about 4 feet of thin copper tube bent into a one-turn coil for impedance matching.

On testing, the matching coil had to be tapped very close to the top for decent SWR, which I figure is a sign that the radiator is too long for resonance. The SWR didn't change at all with the antenna at 9 feet or 36 feet. With a field strength meter, I got NO reading whatsoever until the meter was held above the groundplanes, which I think is great in terms of least interference to neighbors.

I jumped on 38 LSB and began hollering CQ at around 9:30PM, and after about an hour of NO responses (and wondering what the hell I screwed up on the antenna) I got about 3 minutes of contact with A.E. 360 in New Mexico, which is the longest distance I've talked (73 to A.E.360).

Local performance was GREATLY improved on receive, but transmit seems to be a bit weak, so I'm heading out to shorten the radiator a bit, until I can tap the impedance matching coil a bit lower. My wife went out of town this weekend and took the digital camera with her, so I'll post links to pictures of the antenna sometime later this week.

Any comments are welcome. Thanks to Jay, Bill, Sparky, Doc, Scott, and everybody else that had advice and tips to share!

> radiated power.

Bill are you kidding here, or just don't know?

If you are in the near field or far field, reflections will affect the
the field strength, how can they not?

At the field strength meter or receiver, it will see two signals, the
original and reflected signals. These signals will add up in phase
making a stronger received signal, by almost 6dB, if the signals are out
of phase then the signal can be reduced to almost totally canceled out,
quit a effective difference. In the far or near fields.

> Now, if you are looking for absolute gains, then you need to be
> using a properly designed and characterized antenna range.

Wow are you kidding again? "Properly designed and characterized antenna
range" For HF frequencies? Id love to know about one, any suggestions?

You can measure a beams gain and nulls without all that expensive
antenna range stuff, got to know how its done, and what can bite you.

> All an SWR meter will do is tell you where the impedance is 50 ohms,
> assuming you are using 50 ohm coax. It will NOT necessarily tell you
> at what frequency the antenna is resonant. If the coax losses can be
> ignored, such as with short runs, then you want a resonant antenna
> for maximum radiated power - SWR is immaterial as long as the
> transmitter can handle it.

No again, if your antenna is cut to a known operating length, and the
impedance is ball park, its a acceptable risk to allow the SWR to be the

tuning factor. If your trying a completely new type antenna, yes the SWR
and the field strength needs to be looked together, but I always start
at the SWR.

SWR is not immaterial, as long as the transmitter can handle it.

> : Tuning for min SWR is a great place to start, but can bite you if you
> : don't know whats going on and keeping an eye on the field strength.
>
> It is great if the antenna is somewhere around 50 ohms at resonance.
> Many antennas, including a 1/4 wave whip, are not.

I am glad you said that, one of your other posts gives advice to adjust
the length of 1/4 wavelength to a 1 to 1 SWR, and it won't happen.

A 1/4 wavelength ground plane antenna can be tuned with a simple Beta
Match, a parallel inductor at the fed point.

> : The 5/8 wavelength ground plane antenna, will need to be built to its
> : 5/8 wavelength length, and then have the impedance matching circuit
> : adjusted so that the SWR is at its lowest, 1 to 1 on the operating
> : frequency.
>
> : After the SWR is tuned for a min, then the field strength tests can
> : begin.
>
> But adjusting the matching circuit changes the resonant frequency.
> SWR is a very rough starting point only. An antenna bridge or noise
> bridge, combined with a field strength meter, would be far better.

Your missing the point here. The antenna is adjusted to its 5/8
wavelength, then you adjust the impedance matching device for the lowest
SWR. The antenna at its 5/8 wave length, has the lowest elevation angle
of radiation, so the user whats this antenna length, so then the
impedance matching device transfers the max energy. The SWR is a good
way to test a known designed antenna.

However, these 5/8 wl antenna have a very low SWR on two meters, 146
MHz. The energy at 146 MHz sees the impedance matching device, a Beta
Match as a 50 ohm load, without transferring any energy to vertical
element. So the impedance matching device is now radiating most all the
energy, and not the antenna. So in this case of the antenna being way
out of its operating parameters, yes the SWR is a lie, if the field
strength is keep an eye on.

From: sparky@cet.com
Message-ID: <3ae2d9b1.10990657@news.cet.com>
Source record: 79593

SETTING: Twisted is sitting in front of his TV set all alone on a Saturday night:

TWISTEDHOLIC: "Hey moparhed, c'mere boy, the lotto is just about ready to be called."

MOPARHED: "Arf?"

TWISTEDHOLIC: "6 ... damn. 14 ... missed again. 29 ... what's the problem?"

MOPARHED: "Whimper."

TWISTEDHOLIC: "I know, moparhed, Dougie must have known the numbers I picked and he will never let me win."

MOPARHED: (starts humping twistedholics leg)

TWISTEDHOLIC: "Yeah, moparhed, it's a dog's life. You dogs don't have to worry,... ooh..., about anything ...., oh yeah ...., except me beating .... yes....., yes... YES ... HARDER, BOY!"

MOPARHED: "Pant, pant, pant,...!"

TWISTEDHOLIC: "Pant, pant, pant,...!"

MOPARHED: (gets done humping twisted's leg, sits back and lights a cigarette:) "Well, twistedholic, don't you know that I am part of the conspiracy you are fighting? But I really don't care because you give the best leg in Florida."

TWISTEDHOLIC: "Aw, shuddup you mangie mutt!" (twistedholic beats moparhed with a large stick.)

MOPARHED: "Oh baby, you know I like it rough!"

TWISTEDHOLIC: "You bet I do! Now it's my turn, you beat me, ok?"

MOPARHED: "I'm busy."

TWISTEDHOLIC: "But I didn't have my orgasm yet..."

MOPARHED: "Quit whining. You are just as bad as that Spakry on the newsgroup!"

TWISTEDHOLIC: "I'm not whining, and besides, you started it you illiterate canine, can't you read?"

MOPARHED: "No, you started it, and I can prove it because I said so, and because my IQ is 7. That's 161 in dog intelligence, and 4129 in

twistedholic intelligence."

TWISTEDHOLIC: "MY GOD, YOU'RE SAPRKY!"

MOPARHED: "What?"

TWISTEDHOLIC: "If you take the number of times Spraky has posted, multiply it by 69, and add the number of times I have beat you, the number is 4129. That's just too much of a coincidence for me to ignore, so you must be Sypkar!"

MOPARHED: "You know I like it when you talk dirty."

TWISTEDHOLIC: "Aw, shuddup you dumb mutt." (twistedholic beats moparhed again and again)

MOPARHED: "Oh baby ... ungh ... oooh ... oh ... oh ... yes ... yes ... YES ... YES! Oh Twisted, you're the best!"

TWISTEDHOLIC: "I know, just don't tell anyone, or someone might find out that I can understand what you are saying. So, how is your cousin Sam?"

5167. Alinco DJ-X10 E for sale

twistiegayboyfagassmolesterchickenhawk and dim dweebo, 2 vaguely functioning, pond scum like creatures masquerading as people, got married.

During the first week of marriage, they found that they were unable to look at each other in the bedroom with the lights out,
since they can't see each other sucking, or have deep spit swappin kisses in the dark, cuz they each cant tell the others lips from his asshole. After several nights of fumbling around and many misunderstandings with the pets and youg children in the house, fag ass dimmy dweebo figures out a solution.

"Honey, why don't we agree on some simple signals? For instance, at night,if you want to have sex with me,
reach over and squeeze my left nut one time.
If you don't want to have sex, but just want me to use my tongue to rim your delightfully chocolate tasting sphincter, reach over
and squeeze my right nut one time."

twistiefagboychickenhawkmolester thinks this is a great idea.
He suggests to his gayboy wife dweebo if she wants to have sex with him,
"Reach over and pull on my tiny six month old baby looking penis one time, but dont start the second time til 1 hour later!!!. If you don't want to suck on my tiny, six month old baby looking penis, two hundred and fifty times a minute, cuz I am twistiefagboymolesterchickenhawk, and that's what I like." <when I am not pimping my youngest son at keydowns>

Are you sure you have enough current to the radio? Big enough gauge of wire. I really haven't seen discussions about upgrading the regulator so that's why I ask. This radio is designed to put out 30 watts on SSB but needs about 90 watts of input power(YUCK!).

Ok... Now I'm confused...

Maybe I'm just slow, but creating this new thread wasn't force-feeding them the truth, IMHO; it was goading them on to more and more posts in response to this one, which in turn causes you to "force-feed" them some more, which causes them to respond, which....

It's not a catch-22, it's a viscous circle... There IS a difference.

Of course, this is just my opinion on the subject... your mileage may vary.

Usually about 1100 feet is 'best'. If you can't get
it that high, then get it as high as possible.

A 'Warbling' signal on SSB usually means a low
voltage supply. The 'cure' is to 1.start your motor,
2.use larger wire to battery, 3.use a larger power
supply. It isn't usually a fault with the radio, but
with how you power it.

Tim,
Take a look at 'PL-106-529' which is the law allowing
local authorities limited enactment of local laws/ordinances
pertaining to RFI.
About the 'business' use of CB... that's the original
purpose of Citizen's Band radio. Absolutely legal.
'Doc

If you can get it at least 1/2 wavelength above ground level, you've satisfied bare minimum requirements. One full wavelength would be more desireable, that's approx. 36 ft. Don't forget a good rf ground system. Notice I said system. A small copper ground rod, aluminum "vaporizing" ground wire, and a blitz bug won't cut it. Need more info?...toss me an e-mail. I'll be glad to help.

Mark

5190. Pretty Red Panties Info

Newsgroup: rec.radio.cb
Date: 2001-04-22 17:56:52 UTC
From: Rag Chewer <stopthejamming@stopit.com>
Message-ID: <EXEE6.7453$J74.800253@newsread1.prod.itd.earthlink.net>
Source record: 79663

Klaus D. Kramer is the person who created the " Pretty Red Panties" situation that has spread across the nation. It has plauged the 11 meter band(channel19) and on a local basis has spilled over to the ham bands. Any drivers that happen to be in OKC should stop by and pay him a visit. His CB handle is BAM BAM. http://www.qrz.com/callsign/KA5NUP

5191. SSTV and CB ?!

Newsgroup: rec.radio.cb
Date: 2001-04-22 18:26:07 UTC

Hello...

Does anyone out there use SSTV on CB frq and do you work only on 27 MHz or
do you use also 26 MHz ?
TNX for answers...

Dick, I can honestly say that I keep getting happier all the time with AT&T. Yes, I would like something faster than a 56k dial-up modem; however, I have tried some other ISPs and AT&T wins every time. A lot of the freebie ISPs disappeared and for a pay-for-service, you know what you will get with AT&T. Heck, when the local access numbers were changed, I had a guy on the phone who walked me through the 'doggonit, modem, tell me what's going on' stuff. If only Windows was as reliable, I'd have it made!

Tim, as you see from the other posts, CB was intended for business (as well as personal) use. Actually, I am interested in seeing how all of this starts breaking out. At my job, the truckers call with a cell phone for access to the docks. It will be interesting to see how everything shakes out for amateur radio as well as CB what with cell phones getting cheap (less that $60.00 per month with UNLIMITED air time!), the internet, and everything else. Many truckers are using trunking radios as well as the 450 MHz business band. Heck, the times they be a-changin! Now, if I can just find my morse code key ...

It does it even when directly wired to a 20amp power supply, i know it is
internal.
I suspect it is the voltage regulator.

5214. Why did my radio get kicked off of Ebay?

Newsgroup: rec.radio.cb
Date: 2001-04-22 21:02:59 UTC
From: tenfourradio@aol.com
Message-ID: <20010422170259.25178.00000809@ng-mh1.aol.com>
Source record: 79687

Maybe someone can explain, since ebay has not answered my emails. I had a President Grant 40ch am/ssb radio up for auction. It was removed and I was emailed that it is against their policy. It also said someone sent in a complaint about this radio. I know people are mean but why hurt a guy who is trying to make a legitimate buck. This radio was not modified at all, it wasn't an export, and doesn't go against their policy. If the person who did this to me reads this, just remember what goes around comes around.

All I can say is what the OLD song use to say, "White punks on dope!" Actually it IS the removal of prayer from school, and what the LIBERAL NEA (teachers union) has let into the school (DEATH "education") and the rest of the trash they teach (the Humanist religion, including evolution LIES!). They are getting the fruit of their own teachings! Baptist Prophet Lester Roloff said around 20 years ago that the schools will become killing grounds because they kicked GOD out. This is NOT a White or Black issue. Dem Honkey CIA bring the drugs into the country to fund itself. With the govt. participating in so much anti-Romans 13 activity (NOT for OUR good), is it a wonder why these things happen (Deut. 28)? 2 Chron. 7:14 IS the answer. It's not DARE to get off drugs, but DARE to tell your congressman to fund the CIA another way! Dare to go against the REPROBATE Supreme Court and ALL of it's UnConstitutional rulings with no stare decisis behind them (prior foundation or the Common Law). GOD is against the Lawless against HIS LAW !!!Dave!!!!

Maybe someone can explain, since ebay has not answered my emails. I had a President Grant 40ch am/ssb radio up for auction. It was removed and I was emailed that it is against their policy. It also said someone sent in a complaint about this radio. I know people are mean but why hurt a guy who is trying to make a legitimate buck. This radio was not modified at all, it wasn't
an export, and doesn't go against their policy. If the person who did this to
me reads this, just remember what goes around comes around.

Why? Based on a random sampling of various models I'v run acros,, in
general most of the ones I've tested were very poorly engineered.
Inadequate heatsinking, poor bias regulation (if even an attempt at
linearization was made!), and no harmonic filtering on the output.

Good luck to you if you get one....

It's technically trivial but auditors and Congressional committees like
reading material. As I think I mentioned in the original, the FCC got
onto a God Squad mailing list some years ago about supposedly banning
religious broadcasting which they never considered or came close to doing.
They had mail out the wazoo, in warehouses and in bathrooms. Ultimately
they had to have an act of Congress to shred it.

They are generally required to hold communications for some years so I
don't think the powers would let them simply flush it.

Any digital mode is NOT LEGAL on 11m, period. So are out of band emissions
too. However it is legal on the new 5 MURS frequencies. See the link below.

http://www.geocities.com/horseshoe7/MURS.html
http://www.geocities.com/horseshoe7/MURS.html

MURS is a "License Free CB Radio" operating on VHF. This would be a good
place to do your experimentation, and it is legal.

Oh, you think you are SO funny! OK, Last night I spent an hour listening to 11 meters on various "channels"--even the "funny" ones. Here's what I heard--aside from the CQ DX from the wannabees. Two guys on the "freeband" ridiculing another freebander. An obviously VERY drunk old guy using the most foul language one can imagine and daring anyone to "show up" as he put it. "I'LL f****** talk as long as I MF please, and you GD MFs can't do a GD f****** thing about it". Another channel hog on channel 18 playing music and trying to blank everybody else out. Then, "Breaker, breaker on this h'yar channel, anybuddy got a copy on this OOOONNE Bullrider--break, break". Then the usual country hick saying, "yeah, 10-4 thar, I know whutcha mean thar, shore do thar, mercy me thar, gre't day alive thar......." Ad nauseum. What are you doing, looking in the mirror while you mock?

Hi Alex
I don't know what country you are in but in Canada digital modes and SSTV are legal on 11 meters. I had a home built unit on 11 meters a few years ago. I called Industry Canada before going on the air and got the ok from the inspectors. The unit was the Hamcom unit and the schematic and building instructions are included in the program. I can't remember if it did sstv but it did RTTY, WEFAX, hi speed CW and so on. It is very easy to build and plugs into the microphone and speaker jacks on any radio. Then plug it into the printer port of your computer. The trouble was that CB is loaded with mental midgets and if they hear something different or something they don't understand they will try to key you down. This will mess up the packet data and the message will not get sent or the computer and radio will just try to keep sending the same packet until the receiving system confirms that it got it error free. That can take all night. The fun thing was that I just had to have the radio on and the computer program running for the other stations to leave messages and when I came home I could see things like "meet me for coffee" or "phone me when you get home". I did play around with the WEFAX on short-wave and got the pictures from the weather satellites daily. All of this from a free program and about $5.00 worth of spare parts and cables. My suggestions are that you contact your local branch of the government that monitors the radio, (in the USA it the FCC and in Canada it is Industry Canada). If they say it is OK, then find a SSB Ch. that is not used much and keep your experimenting to late nights to stay away from the keyclowns. The program is still available on the net at,
http://www.tav.kiev.ua/~nick/hamcom.htm Be prepared for a lot of flack from the people that don't understand what is going on.

Have Fun

use a real operating system, one that does not take advantage of
everyone and rip everyone off, linux, it is free, alot more stable than
windows, and for those that are hams many lnux releases come with
amateur radio software pre packaged.

The Idiots pulled my NOS 760xlt and I told them it was Stock in the box NOS can be converted but NOT, & they put it back on!
Dave!!!!!!!!!!

"Jeff Mayner" <bk43@pacbell.net> wrote in message news:te6l3jouoo9d54@news.supernews.com...
10/4,

All they saw was "President". They don't care that this is the older model of the President 40 channel cb radio. They see President, they pull it. There is no argument, no way to plead your case. You need to list it as a 40 channel, cb radio and provide a picture. Don't say President or one of the little rat bastards in this ng will tell on you like a 4th grade, little bitch, hall monitor. :-)

Jeff

5238. ANTIKEYCLOWN STRIKE FORCES TAKE NOTE: MESSAGE FROM CORPS COMMANDER FOLLOWS

Newsgroup: rec.radio.cb
Date: 2001-04-23 00:21:29 UTC
From: I can only speak for 4 Corps of the ANTIKEYCLOWN COMMAND AND STRKE FORCE <listAgain@tellEBAY.com>
Message-ID: <3ae36779$1@news2.mibx.net>
Source record: 79756

tenfour:
I can speak only for the 3,4,8 & 9 land Corps of the AntiKeyclown Command
and Strike force...it was not us.
NOT REMEDIAL ACTION TAKEN BELOW:

MEMO

TO: ALL UNITS OF ANTIKEYCLOWN COMMAND AND STRIKE FORCE:

FROM: LT. GEN. KEYCLOWNSLAPPA; 3, 4, 8 & 9-land Corps Commander

SUBJECT: FRIENDLY FIRE CASUALTIES

ALL COMMANDS ARE ADVISED TO INTERROGATE YOUR KFF <Keyclown, Friend or Foe>
OPTO-CYBER INTERFACE SYSTEMS WITH DUE DILLIGENCE BEFORE FIRING ANTIKEYCLOWN
MISSILES NEAR THE FEBA <Forward Edge of Battle Area> OF ETO <Ebay Theater
of Operations>. A FRIENDLY CIVILIAN CASUALTY HAS BEEN DETECTED AS A RESULT
OF FAILURE TO INTERROGATE KFF SYSTEMS DURING RECENT ROUTINE PATROLS OF THE
ANTIKEYCLOWN COMMAND AND STRIKE FORCE ENFORCED "NO AUCTION ZONE." (SEE REF
ONE<1>BELOW)

IT SHOULD BE NOTED THAT FRIENDLY CIVILIANS CONTRIBUTE INESTIMABLE INTELLIGENCE
GATHERING CAPABILITY THROUGH INFILTRATION OF ENEMY C3I UNITS AND THROUGH
UNDERGROUND MANUFACTURE OF ANTI-KEYCLOWN NEWSGROUP WEAPONS AND CHAFF DISPENSERS.

FURTHER, IT SHOULD BE NOTED THAT THE National Command Authority OF THE ANTI
KEYCLOWN COMMAND AND STRIKE FORCE HAS OBSERVED THAT THESE FRIENDLY CASUALTIES
DETRACT FROM OUR SPECIAL OPERATIONS GROUPS' EFFORTS TO WIN THEIR HEARTS AND
MINDS BY OFFERING A POTENTIAL CB ENVIRONMENT FREE OF SPLATTER, CURSING, HOMOSEXUAL,
RACIST, AND DRUG ORIENTED BEHAVIORS. FRIENDLY CASUALTIES, WHEN RECOVERED,
MAY ASSUME THAT THE CURRENT 11 METER ANCESTRAL HOMELANDS SITUATION IS PREFERABLE
TO COMPLETE EXTERMINATION.

Signed,

KEYCLOWNSLAPPA, LT. GEN., AKCSF

of Operations>. A FRIENDLY CIVILIAN CASUALTY HAS BEEN DETECTED AS A RESULT
OF FAILURE TO INTERROGATE KFF SYSTEMS DURING RECENT ROUTINE PATROLS OF THE
ANTIKEYCLOWN COMMAND AND STRIKE FORCE ENFORCED "NO AUCTION ZONE." (SEE REF
ONE<1>BELOW)

IT SHOULD BE NOTED THAT FRIENDLY CIVILIANS CONTRIBUTE INESTIMABLE INTELLIGENCE
GATHERING CAPABILITY THROUGH INFILTRATION OF ENEMY C3I UNITS AND THROUGH
UNDERGROUND MANUFACTURE OF ANTI-KEYCLOWN NEWSGROUP WEAPONS AND CHAFF DISPENSERS.

FURTHER, IT SHOULD BE NOTED THAT THE National Command Authority OF THE ANTI
KEYCLOWN COMMAND AND STRIKE FORCE HAS OBSERVED THAT THESE FRIENDLY CASUALTIES
DETRACT FROM OUR SPECIAL OPERATIONS GROUPS' EFFORTS TO WIN THEIR HEARTS AND
MINDS BY OFFERING A POTENTIAL CB ENVIRONMENT FREE OF SPLATTER, CURSING, HOMOSEXUAL,
RACIST, AND DRUG ORIENTED BEHAVIORS. FRIENDLY CASUALTIES, WHEN RECOVERED,
MAY ASSUME THAT THE CURRENT 11 METER ANCESTRAL HOMELANDS SITUATION IS PREFERABLE
TO COMPLETE EXTERMINATION.

Signed,

KEYCLOWNSLAPPA, LT. GEN., AKCSF

SAY NO to DRUGS (pills), or did you mean an Amplifier Pill? Read Genesis. God SAID: TAKE DOMINION OVER the Earth. Rape is against people, not the ground, pinko! The Earth IS the Lord's Jurisdiction, NOT the commies !!!! Don't you get it--they don't CARE about the alleged "mother earth" worship, they just use it as a vehicle to suck $$$$ out of your pocket!!!! The Freon scam was because DuPont's patent ran out. Private Property is an individual's right to do whatever he wants to do. Corporations (state created entities) do, so why can't we as individuals? No, sunny, the EPA is a communist front against the Little Man, to put more communism here against US individuals. Californy deserves all the brownouts it will get this year! It is a government created problem!!!! Turn their lights out, them fruits & NUTZ !!!!!!!
Dave!!!!!!!

Badabing says:
Do I need to check the newsgroup archives, and prove you are a amp user
and buyer. If I am not mistaken you bought a DAVEMADE m200 and a xforce
base amp.
~~~~~~~~~~~~~~~~~~~~~~~~~~~
Badabing also says:
"i don't know about any davemade you may have had"
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

Damn "Bad" you forget from one insult to another what you have said.
Oh and as you said, the X Force stuff I saw was total JUNK. I have none
of this type stuff now so get off my case. I started out on this thread
by posting what I thought was a reflection of MY memories of past days
on the CB. 41 years for me to be exact so you and your meally foul mouth
can't tell me anything.

Dennis in GA.

Dave, sometimes I think your posts are boardering on nuts (which side, I won't go into) - but I have to hand it to you - you are correct about DuPont's patents running out. Nice country we live in, eh? Just please don't hand me that commie pinko stuff - I served 4 years in the Navy, one of which was in Vietnam.

73 from Rochester, NY
Jim

5272. Re: Roll-your-own 5/8 wave questions

Newsgroup: rec.radio.cb
Date: 2001-04-23 03:14:56 UTC
From: Bill Nelson <billn@spock.peak.org>
Message-ID: <9c06ngfhe1@bashir.peak.org>
Source record: 79704

Jay in the Mojave <jay123a@qnet.com> wrote:
:
:> If you are out of the near field of the antenna, then reflections
:> don't matter, as any reflections are at a constant percentage of the
:> radiated power.

: Bill are you kidding here, or just don't know?

: If you are in the near field or far field, reflections will affect the
: the field strength, how can they not?

No, I am not kidding. Read what I wrote again.

: At the field strength meter or receiver, it will see two signals, the
: original and reflected signals. These signals will add up in phase
: making a stronger received signal, by almost 6dB, if the signals are out
: of phase then the signal can be reduced to almost totally canceled out,
: quit a effective difference. In the far or near fields.

You have the right idea, but the wrong value. If you have a direct and
reflected signal exactly in phase, the increase will be 3 dB.

But a proper antenna range does not have such reflections. Any that do
exist, as the one from the ground, is accounted for in calibration and
certification of the test range.

All bets are off in the near field.

:> Now, if you are looking for absolute gains, then you need to be
:> using a properly designed and characterized antenna range.

: Wow are you kidding again? "Properly designed and characterized antenna
: range" For HF frequencies? Id love to know about one, any suggestions?

Just visit any decent antenna manufacturer. Or read a text on the
proper design and characterization of a test range. It is not a trivial
task to set one up.

: You can measure a beams gain and nulls without all that expensive
: antenna range stuff, got to know how its done, and what can bite you.

You certainly can get relative measurements. But if you want to be able
to compare the results to another antenna, and be able to quantize the
results, you need a proper range.

:> All an SWR meter will do is tell you where the impedance is 50 ohms,
:> assuming you are using 50 ohm coax. It will NOT necessarily tell you
:> at what frequency the antenna is resonant. If the coax losses can be

:> ignored, such as with short runs, then you want a resonant antenna
:> for maximum radiated power - SWR is immaterial as long as the
:> transmitter can handle it.

: No again, if your antenna is cut to a known operating length, and the
: impedance is ball park, its a acceptable risk to allow the SWR to be the
: tuning factor. If your trying a completely new type antenna, yes the SWR
: and the field strength needs to be looked together, but I always start
: at the SWR.

But how do you know that the impedance is "ball park"? The SWR meter does not allow you to tune the antenna to resonance all by itself, unless you know that the resistance at resonance is 50 ohms. The odds are, it won't be.

: SWR is not immaterial, as long as the transmitter can handle it.

Note that I said, "if coax losses can be ignored". For example, I once designed a transmission system where I used a strip-line as the transmission line between the transmitter and the antenna. The impedance of the line was not anywhere close to the resistance of the antenna at resonance. But I used a matching network between the transmitter and the strip-line, so the transmitter would produce full rated power into the transmission line. The end result was that there was essentially zero loss in the transmission line or matching network. All of the power provided by the transmitter was radiated by the antenna. The SWR was in excess of 10:1.

:> : Tuning for min SWR is a great place to start, but can bite you if you
:> : don't know whats going on and keeping an eye on the field strength.
:>
:> It is great if the antenna is somewhere around 50 ohms at resonance.
:> Many antennas, including a 1/4 wave whip, are not.

: I am glad you said that, one of your other posts gives advice to adjust
: the length of 1/4 wavelength to a 1 to 1 SWR, and it won't happen.

I did? I don't recall doing so. I tell people to ignore the SWR and use a field strength meter.

: A 1/4 wavelength ground plane antenna can be tuned with a simple Beta
: Match, a parallel inductor at the fed point.

There are a number of ways that such an antenna can be "matched" to the transmission line. You just have to make sure that the matching method does not absorb more power than you would lose in the transmission line if you decided to connect the two directly.

:> : The 5/8 wavelength ground plane antenna, will need to be built to its
:> : 5/8 wavelength length, and then have the impedance matching circuit
:> : adjusted so that the SWR is at its lowest, 1 to 1 on the operating
:> : frequency.
:>
:> : After the SWR is tuned for a min, then the field strength tests can

:> : begin.
:>
:> But adjusting the matching circuit changes the resonant frequency.
:> SWR is a very rough starting point only. An antenna bridge or noise
:> bridge, combined with a field strength meter, would be far better.

: Your missing the point here. The antenna is adjusted to its 5/8
: wavelength, then you adjust the impedance matching device for the lowest
: SWR. The antenna at its 5/8 wave length, has the lowest elevation angle
: of radiation, so the user whats this antenna length, so then the
: impedance matching device transfers the max energy. The SWR is a good
: way to test a known designed antenna.

That does not guarantee that the antenna is resonant. As I stated, the
matching device changes the resonant frequency of the system.

Again, if you adjust the matching network for lowest SWR, all you are
doing is matching the coax to the antenna/network. This says nothing
about whether the antenna is resonant.

: However, these 5/8 wl antenna have a very low SWR on two meters, 146
: MHz. The energy at 146 MHz sees the impedance matching device, a Beta
: Match as a 50 ohm load, without transferring any energy to vertical
: element. So the impedance matching device is now radiating most all the
: energy, and not the antenna. So in this case of the antenna being way
: out of its operating parameters, yes the SWR is a lie, if the field
: strength is keep an eye on.

That is precisely what I have been saying. The SWR meter does not tell
you if the system is resonant - only whether you have a 50 ohm load to
the coax.

> one one time

If you want to put something up that is worth the effort to haul up the tower I would suggest three elements, a consultation with Jay, and a bit of software pounding after you decide if what you really, really want is Front-to-Back or Forward Gain.

If you are set on a two element, decide on where you want the driven element to resonate. 25 MHz should be about 113 inches boom to tip where 28.5 MHz is right at 100.

The reflector is spaced at .15 wavelength or .6 times the driven element length which means the whole shooting match will fit on a 6-foot boom of 2 inch aluminum.

Find a good source of 6061-T6 aluminum tubing in 3/4, 5/8, and 1/2 because they will nest in each other nicely. Use sheet metal screws, preferably aluminum, to hold the elements together. Start with about five feet of 3/4, put about a foot of nested tubing in the middle to strengthen things so the mounting to the mast does not crush it and drill and screw that.

Now put in enough 5/8 to project out about 18 inches with another six nested. Conductive lubricants are made for the purpose. Someone??

You now have four feet on each side. Take a hacksaw and quarter the ends down about three inches. You will now insert a six foot piece of 1/2 inch and use a hose clamp to secure it. Set it for the driven element length you think you will need.

Same song for the reflector except it will be about 15% longer.

While it seems like overkill, get three aluminum plates 1/4 inch about 5x6 inches for two and 6x6 for the third and use U-bolts with saddles and muffler clamps to hold it together. Long side of the plate goes with the elements.

Set it vertically with the reflector on the ground or close to it and support it with a ladder. Now comes the fun. Using the last two feet of the 3/4 for a gamma rod and some plastic, hang the gamma rod with a shorting clamp at the end. You should need a small air variable cap about 100 pf to match the antenna to 50 ohms. Buy a cheap container at the supermarket, mount the SO239 in it and the cap so that you can adjust it thru the box, punch a few drainholes, and adjust away. You may have to

adjust the driven element to center its frequency.

The reflector is purposely long to widen bandwidth. Keep the boom at eight feet for when you want to do it right as a three element. Get the #16 0.065 thickness for the boom.

Not the cheapest approach but a good one if you plan to do much of it and learn to swear like Tugboat Annie.

The driven element is 1/2wave in length, director is 5% shorter, reflector is 5% longer.
The spacing between the elements determines bandwidth and gamma matching is favored.

now*dipshit*.You spend your life in dispute..here no less..LOSER!

"Oh, lean and Dogie and KAri are losers alright. Went from an annoying
pink playhouse of hypocritical radio cries to a "Twistiewatch
group".split right up the seams of their dresses..hyuk hyuk hyuk!"

Oops, that's right, I forgot -- you don't care.
Sparky, FLCD

"Nope. But you apparently do. Had a blast this weekend, 75 degrees,
loaded up the boat with fish, talked some awesome DX all day Saturday
from the Shallows, bumped it on a few of the regs., and just plain got
on down. Had a large time. And judging by your snail marks, you sat here
and begged and whined all weekend. Hey N8 Dogie, cover up that AOL
trail. It smells. What happened to that other ISP? LMAO! Don't worry.
You aren't the only one. Another dirty party lost their pacbell
account...hahaha."

Try San Francisco. He said he used to live there and loved it.
Sparky, FLCD

"Sure did. But you would have no clue about culture or anything else
because your shallow stereotypical lying mind has a full plate right now
dealing with me. Besides that, your brain is bursting at it's capacity
with all the education you acquire as you stare at your screen, shaking
violently and uncontrollably awaiting my reply, any reply, as I am all
that validates your worthlessness....ahahahah...you are chained to my
every word as you drool on the chain that gags you and refrains you from
getting fresh air to that stagnate mass of malignant cancer that you are
so ashamed of."

New Evidence: chickiehawk's posts analyzed by professional

Group: rec.radio.cb Date: Sat, Apr 21, 2001, 10:23am From:
twistedhed@webtv.net (Twistedhed)
Not only are the nu8mber of posts by the chickenhawk in direct proportion with the number of times he has been humiliated, but also the number of times he posts are a direct correlation with the degree of inferiority he feels for himself. He degrades others because he cannot handle the way he feels toward himself. He has physically abused several in his world, and the verbal abuse is a substitute for his outrage, selfhatred, and inadequacy he feels toward himself. Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity, among others), resutling in a natural, but deficient and defensive state. His sense of self worth is extremely low, probably due to the fact that the individual in question is unemployed, coupled with rejection and/or sexual and physical abuse as a child, therefore, unproductive by society's normal creed. Social acceptance has always come with a difficult struggle to this individual, although it is extremely important he feel productive in his own mind, even if the actions are to be of negative and negligible impact. An individual blinded by his own actions who has so far removed himself from the reality of the self imposed situation due to pathological and deluded ideas of grandeur, obsessions and paranoias is in need of a licensed, professional, qualified individual to assist with the dilemmas and inner demons that the individual fails to recognize, whether deliberate or unconscious.
    This, I did not make up. It came from a qualified individual who puts on self-help clinic seminars around the country and maintains regional columns in certain Knight-Ridder publications on mental health. He is also a fishing guide in Punta Gorda.

When things went to hell in this flamefest that used to be
the cb newsgroup, I decided to start dropping in once a month
so as to not waste my time having to see all the spam and spew
on a daily basis. I keep hoping every time I stop in that things
will have calmed down and the group will have gotten back to
as close "normal" as possible, but I see it has only gotten worse
in the past month. I see we now have some sort of self-proclaimed
anti-cb'er militia group headed by some lunatic ham operator, and
the anti-twistedhed group, which I figure has to be spearheaded by
the infamous N8WWM asshole, who twist sent into a rage months
ago. Dave and Debby are still bashing the commies, ie. everyone
they don't agree with or manufacturers they don't like, while waiting
for the world to come to an end .
I have to admit, all these nutcases are persistent bastards, and I
thought they surely would have given up by now, but I see that isn't
the case. Maybe they'll give it a rest over the summer months, maybe
even lose interest. Wouldn't that be nice.
Last but not least a good hearty FUCK YOU to all you ham bastards
who don't like what I have to say. See you next month.
The Phoneman

PS>Don't waste your time flaming me with one of your "phoneyboy"
postings douggie boy. Save yourself the extra time to devote to
someone who will joust with you. Oh ...to save you the trouble
this post was made from news1.epix.net.....BFD.

Yep, that is right, they are taking up too much band width with this crap,
why don't set up a list over on yahoogroups.com for all this junk.

On December 11, 2000, in rec.radio.cb, Douglas Adair, N8wwm choked forth these lies:
Violent threats are over the line. If a flame war pisses me off I just don't go there.
People, you can call me anything you want. I have never threatened anyone here,

And here we have Dogie showing his true colors, to yet another person I fly to California and post as. In rec.radio.cb, on the day of January 21, in the year of our Lord 2001, Nocode Doug Adair N8WWM, eloquently regurgitated and shared the content of his gray matter with::
Hey C*** (Expletive deleted),
Wanna meet at Dayton or before?
I will whip your gayboy ass like a red headed step-child. You are a punk-suck fagboy hiding behind an assumed name who dont have any balls.

"Aheeehaaaa! Is that not the most?"

Come on, you lap likkin shit hunk...wanna party?

"Sure. I wanna pin the tail on the donkey..LMAO! But you are yellow. Matter of fact, I think if you saw the sun, you would rot instantly."

I will kick your fukkin ass. You are a sissyboy faggot ILLEGAL KEYCLOWN. Go hump your wife Dweebo faggot. You can only talk smoke...I can bring it into your life.

"HAHA! You can't do jack, son, except sit their and feel inferior. The only thing you WILL do is continue to be made an ass of. WHEN I decide, and not a second sooner."
"
I think you have never opened a can of whip ass. I volunteer to show ya how.
*u**
Your turn, ***T!

"Take your BP pills now, all that expendage of gray matter, you need to sleep for days. Speak for more embarrassment."

There you go again Tim, pushing your pirate radio activity. Of course your doing it on a UK frequency too, which is outside of the legal 11m band in the USA. How much bootlegging have you been doing on the Ham Bands without a license? You have already been on record checking in to operating on the "Echo Charley" frequencies so I don't think a small matter of needing a Ham license would keep you out of Ham bands now. You don't care about part 95 rules is just more proof.

Fuck 'em... I have two filters installed for my newsgroups, and it filters out about 85% to 90% of all the shit in here... Why bother letting them push you out? Just set the filter(s), and tell it to delete the message that fall under that category... Easy, no mess, no extra shit to scan through... The newsgroups has actually become quite pleasant since I added my filters....

The spacing between elements is what gives the gain/front to back rejection.
Element thickness will effect bandwidth

And just how can someone forge the Message-ID? Have you ever heard of
"outsourcing services"? Have you even bothered to check out my ISP's
home page? I think you did, but just won't admit it. Just like you
can't admit when you are wrong, even though you say you can.

Did you show your friend some of the posts you have made here? Does he
know just how long you have been bantering on this ng? What did you

friend have to say about that? And if your friend gave his "professional" opinion, what is that person's profession? Is he willing to stand behind his opinion? If so, have him join the ng, so he can see all the BS you spew that you can't and won't back up. What would he think if he saw what happens when you are faced with the facts, how you hide in a corner and spout pea-brained excuses for your behavior? I don't think he would be your friend any more. If you act in person the way you do on the ng, I'm suprised you have any friends at all.

So is that why you hide behind the keyboard? Are you afraid that someone you know personally will see how you REALLY are? It must be a lonely existence for you, hiding your true personality from everyone that matters. Oh well, it not my problem, and you created it yourself. You have to live your own life of lies. I truly feel bad for all the people you are fooling with your facade.

Dick,

Go to worldnet.att.net. You should be able to download the software from there. Actually, if you have Win98 or later (maybe even Win95B), you should have (in your start menu) ... start, programs, online services. AT&T will be one of those choices. Click on that and it should set you up, connect you with AT&T, and allow you to select the service level you want. Once the credit card info is entered, chuga chuga - and you'll be up and running. Now.

<babble snipped>

See here, Twisty. These are the facts.

1. You DID spend time in San Francisco
2. In SF you DID give blowjobs, take acid, and go to jail
3. You DO beat your dog for sexual pleasure
4. You DO think stealing is admirable
5. You ARE an HF pirate in defiance of federal law
6. You ARE a hopeless blowhard and certified loony

You can dispute the above points all day long, but EVERYONE knows you are
a sham. Why continue with the lies? Fess up, come clean, and then leave
in shame. (No, on second thought don't go. Stay around and allow us to soundly
trounce you again and again and again and again and...)

Not bad advice. I do have a copy of trial Linux, but I've been looking around the web to ensure that the drivers are available for my old aging IBM 6587 (with a 400 MHz AMD transplant and 112 Mb of ram). Nuts, they had it at Sam's club (Red Hat, I think) some months ago. Believe me, I don't mind learning, but I've a fair amount of software that runs under Winblows and want to keep using it (specifically, all the software for my digital camera as well as the editing programs). Not only that, but I'd like to purchase a known simple-to-use SELF-INSTALLING version of Linux. I never had to tackle a lot at once, having had my first computer in 1976, programmed a bit of machine code (not assembler), learned Basic, Windows 3.1, 95, 98 (although they are quite similar), Visual Basic .... the point being that I'd hate to undertake it all again in one fell swoop! I'd be happy to learn Linux, but would want to be a simple user at first and be able to take my time learning all the points of the system. Any URLs to pass along for info?

Thanks,

Jim

take acid,

5) Which would explain why I always laugh at you and see you as the
color yellow.

and go to jail.

6) I accused YOU of doing time when you hollered "hoo-heee", remember?
The best defense is a great offense, not a sloppy one.

Few more added to edumacate Dogie.

7) HF Pirate? Please describe. (IF you are capable of posting without the envy showing through in porn.) IF you are correct, I shall let you know. IF by pirate, you mean hammie bands, you lie some more and this conversation is finished, because I said so.

8) Please cite the Federal law I break.

9) I don't beat dogs, I kill kittens. They make great shark bait on a meat hook.

10) Nothing to dispute. You are yellow, a lying, sexually confused troll who is in deep awe of me and deeply disturbed. Deal with it.

11) Where were the cops for the alleged bad deeds you said I did? Where was the bust of my RF lab? Even my boys in the store in TX are cranking them out faster than you date Rosey Palm and her five sisters. Why am I still here? Didn't that abuse addy help you? Why can't I keep my customers stocked? Why am I selling all of the 128 pills I build faster than I can make them? Why, it's because of your lip service of course. I am even getting orders from Finland now. Saturdays free for all freeband went great. Many check-ins on triple 5 as both n8wwm AND kc8ldo. I heard it's going across the nation with this fad. Sheriff B-O-B was notified that you two volunteered your calls, and he is just tickled. Pay special attention now Dogie, wouldn't want to miss yourself this weekend.

New Evidence: chickiehawk's posts analyzed by professional
Group: rec.radio.cb Date: Sat, Apr 21, 2001, 10:23am From: twistedhed@webtv.net (Twistedhed)
Not only are the nu8mber of posts by the chickenhawk in direct proportion with the number of times he has been humiliated, but also the number of times he posts are a direct correlation with the degree of inferiority he feels for himself. He degrades others because he cannot handle the way he feels toward himself. He has physically abused several in his world, and the verbal abuse is a substitute for his outrage, selfhatred, and inadequacy he feels toward himself. Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity, among others), resutling in a natural, but deficient and defensive state. His sense of self worth is extremely low, probably due to the fact that the individual in question is unemployed, coupled with rejection and/or sexual and physical abuse as a child, therefore, unproductive by society's normal creed. Social acceptance has always come with a difficult struggle to this individual, although it is extremely important he feel productive in his own mind, even if the actions are to be of negative and negligible impact. An individual blinded by his own actions who has so far removed himself from the reality of the self imposed situation due to pathological and deluded ideas of grandeur, obsessions and paranoias is in need of a licensed, professional, qualified individual to assist with the dilemmas and inner demons that the individual fails to recognize, whether deliberate or unconscious.
=A0=A0=A0=A0This, I did not make up. It came from a qualified individual who puts on self-help clinic seminars around the country and maintains regional columns in certain Knight-Ridder publications on mental health. He is also a fishing guide in Punta Gorda.

I believe my response was:
Reference your quote. I would like to talk with this person.

"I don't believe I was referring to you once again, but as to be expected, you stuck your beak in where it didn't belong. Actually, what took place was the diagnosis struck a nerve with you, rattled a skeleton or two from that graveyard in your closet, and your slip was showing as

you momentarily forgot who you were posting as. Your anger made you speak before you thought, otherwise you would have realized how ridiculous you look coming to the porn posters defense when you said you don't condone porn, or Dogies behavior, nor have you ever posted it. But...you lied."

I'm waiting.

"Oh boy. Will you hold your bweath, er, breath again till you turn blue and make more threats?"

Are you going to back up your "quote",

"I am absolutely without doubt you would benefit greatly from speaking with a man of his stature, which is why I truly believe you when you say you would like to talk to him, however, I am also certain he is not accepting new patients, and even if he was, most HMO's only cover 10-30 visits in a calendar year, and seeing how April is almost over, you have no visits left. However, IF you are truly in need, since he is not accepting patients, if you send me your health coverage information to verify you are covered, I am certain he would see you as a favor to me. You are responsible for any deductibles (prepaid at visit) and he charges 200 per hour, you are responsible for any copay. Whenever you are ready, send me your info."

or just post the same crap over and over again?

No. That is Dogie and his porn that you champion. Then again, al you do is lie.(Slow bus..hmmm)

Sparky: completed scent discrimination and obeys strong commands, now twisties alfa-female all state bluenose hound bitch and Dogies main competitor for alfa-female position in the pack.

I should have said.......
READ & WEEP!!!!!!!!!!!!!!!!!!

From: "Dianne Henry" <diannehenry@hotmail.com>
Subject: Fwd: School Shootings and White Denial
Date: Fri, 09 Mar 2001 16:20:35 -0000a
Interesting commentary.....it's long but worthwhile reading. School Shootings and White Denial Tim Wise, AlterNet March 6, 2001

I can think of no other way to say this, so here goes: White people need to pull our heads out of our collective asses. Two more white children are dead and thirteen are injured, and another "nice" community is scratching its blonde head, utterly perplexed at how a school shooting the likes of the one yesterday in Santee, California could happen. After all, as the Mayor of the town said in an interview with CNN: "We're a solid town, a good town, with good kids, a good church-going town...an All-American town." Yeah, well maybe that's the problem. I said this after Columbine and no one listened so I'll say it again, white people live in an utter state of self-delusion. We think danger is black, brown and poor, and if we can just move far enough away from "those people" in the cities we'll be safe. If we can just find an "all-American" town, life will be better, because
"things like this just don't happen here." Well bullshit on that. In case you hadn't noticed,
"here" is about the only place these kinds of things do happen. Oh sure, there is plenty of violence in urban communities and schools. But mass murder; wholesale slaughter; take-a-gun-and-see-how-many-you-can-kill kinda craziness seems made for those safe places: the white suburbs or rural communities. And yet once again, we hear the FBI insist there is no "profile" of a school shooter. Come again? White boy after white boy after white boy, with very few exceptions to that rule (and none in the mass shooting category), decides to use their classmates for target practice, and yet there is no profile?

Imagine if all these killers had been black: Would we still hesitate to put a racial face on the perpetrators? Doubtful. Indeed, if any black child in America -- especially in the mostly white suburbs of Littleton, or Santee -- were to openly discuss their plans to murder fellow students, as happened both at Columbine and now Santana High, you can bet your ass that somebody would have turned them in, and the cops would have beat a path to their doorstep. But when whites discuss their murderous intentions, our stereotypes of what danger looks like cause us to ignore it -- they're just "talking" and won't really do anything. How many kids have to die before we rethink that nonsense? How many dazed and confused parents, Mayors and Sheriffs do we have to listen to, describing how "normal" and safe their

community is, and how they just can't understand what went wrong?

I'll tell you what went wrong and it's not TV, rap music, video games or a lack of prayer in school. What went wrong is that white Americans decided to ignore dysfunction and violence when it only affected other communities, and thereby blinded themselves to the inevitable creeping of chaos which never remains isolated too long. What affects the urban "ghetto" today will be coming to a Wall-Mart near you tomorrow, and unless you address the emptiness, pain, isolation and lack of hope felt by children of color and the poor, then don't be shocked when the support systems aren't there for your kids either.

What went wrong is that we allowed ourselves to be lulled into a false sense of security by media representations of crime and violence that portray both as the province of those who are anything but white like us. We ignore the warning signs, because in our minds the warning signs don't live in our neighborhood, but across town, in that place where we lock our car doors on the rare occasion we have to drive there. That false sense of security--the result of racist and classes stereotypes -- then gets people killed. And still we act amazed. But listen up my fellow white Americans: Your children are no better, no nicer, no more moral, no more decent than anyone else. Dysfunctions is all around you, whether you choose to recognize it or not.

According to the Centers for Disease Control, and Department of Health and Human Services, it is your children, and not those of the urban ghetto, who are most likely to use drugs. That's right: White high school students are seven times more likely than blacks to have used cocaine; eight times more likely to have smoked crack; ten times more likely to have used LSD and seven times more likely to have used heroin. In fact, there are more white high school students who have used crystal methamphetamine (the most addictive drug on the streets) than there are black students who smoke cigarettes.

What's more, white youth ages 12-17 are more likely to sell drugs: 34% more likely, in fact than their black counterparts. And it is white youth who are twice as likely to binge drink, and nearly twice as likely as blacks to drive drunk. And white males are twice as likely to bring a weapon to school as are black males. And yet I would bet a valued body part that there aren't 100 white people in Santee, California, or most any other "nice" communities who have ever heard a single one of the statistics above. Even though they were collected by government agencies using these folks' tax money for the purpose. Because the media doesn't report on white dysfunctions.

A few years ago, U.S. News ran a story entitled: "A Shocking look at blacks and crime." Yet never have they or any other news outlet discussed the "shocking" whiteness of these shoot-em-ups. Indeed, every time media commentators discuss the similarities in these crimes they mention that the shooters were boys, they were loners, they got picked on, but never do they seem to notice a certain highly visible melanin deficiency. Color-blind, I guess. White-blind is more like it, as I figure these folks would spot

color mighty damn quick were some of it to stroll into their community. Santee's whiteness is so taken for granted by its residents that the Mayor,in that CNN interview, thought nothing of saying on the one hand that the town was 82 percent white, but on the other hand that "this is America." Well that isn't America, and it especially isn't California, where whites are only half of the population. This is a town that is removed from America, and yet its Mayor thinks they are the normal ones -- so much so that when asked about racial diversity, he replied that there weren't many of different "ethni-tis-tities." Not a word. Not even close.

I'd like to think that after this one, people would wake up. Take note. Rethink their stereotypes of whom the dangerous ones are. But deep down, I know better. The folks hitting the snooze button on this none-too-subtle alarm are my own people, after all, and I know their blindness like the back of my hand.

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't mean a THING if you ain't got that SWING!!!!!!!

You are jumping to conclusions again. You posted a quote without
referring to the source. So I said, "Reference your quote", or is that
too difficult for you to understand? You seem to attribute to me quite
a few characterizations that really have nothing to do what anything,
except perhaps your own projections. Who do you think you are fooling?
Anybody?

You see, that's the fun of all this. I troll for your response, and
you willingly oblige. Every time you try to say something intelligent
you end up incriminating yourself to the point where the only way you
can avoid the inevitible responses (which are usually posts calling
for you to back up your BS) is by trolling. And even that backfires on
you because the personality traits you attribute to others show that
you have a depth of understanding that can only be had by one that has
experienced your distorted views. In other words, where do you come up
with this garbage?

>
>I'm waiting.

And I will continue to wait, because your quote is, like everything
you write, nothing but BS.

>"Oh boy. Will you hold your bweath, er, breath again till you turn blue
>and make more threats?"

Again? Knowing that these are projected attributes, how often to you
throw these tantrums?

> Are you going to back up your "quote",

I like to monitor the SSTV transmissions on 27.700 USB, lots of pictures from DX stations can be copied, I have some photos from stations in France and the Czech republic. There is even an SSTV repeater in Canada. All you need is a radio which can receive usb on that freq and a computer with a sound card. I like to use W95SSTV, set for auto receive and autosave, so it will work automatically. At the end of the day, I check out the pictures. Just do a search on yahoo or other search engine for W95SSTV to find the software.

Browsing through the archives I noticed that there are a few others that share twisted's spelling errors, grammatical construction, narrative progressions, etc. -- subconscious things he can't cover up even by trying (a little trick I learned working for S4). If I'm right, he might not even be in Florida, or may have two residences.

I also noticed that you made an association between 1mangang and twistedhed (which was fairly obvious). But prior to that you made an association between 1mangang and phoneman. Do you have anything that can validate this, such as a post I missed?

I am about to join the CB radio community. I am located in Belgium. I have two specific questions regarding CB equipment.

- Are there any handheld CB transceiver with FM - AM - SSB capability (or at least FM - AM) ?

- Based on the equipment I have seen to date, I have almost nailed down my selection to President Harry FM-AM 40 channel mobile as my first CB. Can you
tell me the good's and the bad's of this radio?

Regards.

Hi,
I am interested in getting a CB radio with am/fm stereo for my motorcycle. A unit that could hook up to the handlebars and have a push button to activate the talk mode. I would also like to incorporate this system into a "Chatterbox" intercom headset. I know Chatterbox has such a CB unit but without built in am/fm stereo. Anyone know of other companies that handle such products. Please forward any websights and phone numbers.
Thank you.

Hello & Good Morning Sparky,
Again, you're acting almost as bad as the others
with this insistence of fanning the flames. You tell
everyone that you are no where near like them with
the exception that you don't like illegal operators.
But yet you still fan the fire with posts that have only
one purpose, irritation!
One would hope that if you stood by your statements
of " I will only respond to related questions, not insults"
most people would gladly debate issue's with you.
But it is my belief that because of this constant flaming between certain
parties, will leave those people out of any real debate of issues, without
any credibility.

The Landshark

Look for AudioComm, they also have a unit
that is capable of taking a cb, with the proper
lead connection between the units. The model
should work for you, though it is expensive.
Also Chatter Box does have a unit that is capable
of using a cb, I believe it's the Sport X2?

This guy was walking through the zoo one day. When he was in front of the gorilla cage he bent down to tie his shoe. He noticed through the corner of his eye that the gorilla had also bent down. Then when he stood back up he saw that the gorilla also stood back up. To see if it was a coincidence, he bent down to tie his other shoe and once again the gorilla bent down. He stood up and the gorilla stood up. After glancing over his shoulder to make sure that nobody else was around, the man jumped up in the air. And you guessed it, the gorilla jumped up. The man was getting a kick out of it. He started making faces at the gorilla and the gorilla would copy everything he did. Finally the man got next to the cage and pulled the lower lid of his right eye down. At this point the gorilla reached through the cage pulled the guy in, threw the guy around the cage, and generally beat the s*it out of him, then threw him back out of the cage. After hearing all the commotion, the zookeeper came running over to the man."What on earth happened?" asked the zookeeper."I don't know" said the man. "He seemed calm a second ago. I was jumping around and he was jumping around and he was doing every thing I was doing. Then all of sudden after I did this (pulls lower eyelid down) he got all mad and beat the hell out of me.""Well, no wonder!!!" exclaimed the zookeeper. "That," (pulls lower eyelid down) "means F... YOU in gorilla talk!" "Oh," said the man, not quite satisfied.He left the zoo but returned an hour later with a large shopping bag. Again, after making sure that no one was watching, he started jumping around and the gorilla did the same. After a minute or two of this he grabbed the bag and pulled out two butcher knives and threw one of them into the cage. He lifted the other knife over his head at which point the gorilla grabbed his knife and also lifted it over his head. After a minute of cutting the air with his knife and watching the gorilla do likewise the man snuck a large salami out of the bag with his other hand and stuck it between his legs. With a sweeping motion he came down with the knife and whacked off the salami "WHACK!!!"At this, the gorilla simply looked at the man and pulled down his lower eyelid

I would look for a good 50 MHz to 60 MHz dual trace analog scope. I doubt you would have any need of a digital storage scope. A 30 MHz dual trace scope would do, however the amplitude response will be down by 3db (50 percent) at that frequency. It will be nearly the same at 27 MHz too. If you don't care about the roll off at 30 MHz then the 30 MHz scope would be a bit cheaper.

Other things to keep in mind is get a scope with a METAL case, and a shield around the CRT. The scopes that have a plastic case are prone to picking up all sorts of noise when you least expect it. Also the CRT should have a Mu-Metal shield around the CRT, which keeps stray magnetic fields from mucking up the nice sharp trace. You would be surprised by how many "good" scopes don't have one or both of these items to save a few bucks.

Last but not least try to get a scope on a try before you buy deal. That way if the scope turns out to be a bust in your environment your not stuck with it. 8-))

Where I work we use almost all Phillips scopes in the electronics lab. We had reliability problems with the last several bench type Tektronic scopes, using CRTs, we got. We also have a couple of HP digital storage scopes, 100 MHz and 500 MHz, which seem to work fine.

He just uses the phone at no cost to him, and he does not even have to
worry about the sun spots fadding out in a few years like you will. 8-))

> if i wanted on hf/vhf/uhf i would have got my ticket back in 92

What you really mean is IF you could. I know you can't read a frequency
chart. That much you have proved twice already with the UK frequency commets
you made. Or would you care to deny it again just so I can post the URL for
the CB Radio site with the band chart once more?

You know it's people like you, that show no respect for FCC rules that serve
to motivate others who do, which creates a call for the FCC for more
enforcement actions. Hams are getting a little more upset with CBers about
the "export radio" issue, illegal amplifiers, and general bootlegging on the
Amateur Bands among other things. You want to be bold, then just keep up
what your doing, and somebody will make putting you off the air their pet
project. Remember there are a lot of retired Hams out there with nothing
better to do and little reason to like a CBer like yourself. Oh, I'm also
sure they will enjoy doing so too, i.e. making you a "hobby". Oh, before I
forget stop by the Ham policy news group to read about the last idiot who
got a NAL for $13,500 for doing what you do.

Sure height is critical if you want line-of-site distance. If you aren't worried about being legal and want skip then you are correct, height isn't that important. But to avoid ground losses you should be at least 1/2 wave above the ground.

5376. CB Antenna (No Ground Plane)

Newsgroup: rec.radio.cb
Date: 2001-04-24 22:31:48 UTC
From: Paul Manoian <manoian@mail.com>
Message-ID: <djubetoifh690ehstaj92fukdn4dv5hm4k@4ax.com>
Source record: 79849
Cross-posted to: rec.autos.makers.jeep+willys,rec.radio.cb

Since I have a fiberglass body on my Jeep, I had to get to an antenna
that would support no ground plane. I decided to go with a Firestik
kit since I've heard nothing but good things about them. Here's what
I bought:
http://www.firestik.com/Catalog/NGP_3-Way.htm

This kit comes with a "tuned" coax cable and stainless 3-way mount. I
have to use the cable that came with the kit since it serves as a
tuned circuit that creates the necessary counterpoise. Now, here's my
question: Do I *have* to use the mount that came with it? The spring
is pretty heavy so I'd like to go with a different spring mount if I
can. I already have one similar to this:
http://www.valcoelectronics.com/images/cb80.jpg

Can I use it in place of the 3-way that came in the kit? If the cable
is specially tuned for the "No Ground Plane" antenna, would I defeat
the purpose by using a completely difference mount?

Hi, I'm Jim

I'm a long time CB'er, I have a CB Shop up in Edmonton Canada and a little CB museum. I also own cbradio.org and supercb.com, they are both currently hooked to the same ip and the current design sucks BIG TIME, so don't point out it sucks I already know. I'm looking for suggestions on what to do with the site? What I want to know is what would be a useful CB radio site for all the users out there?

-would a good trading / forsale board be useful?
-would you like a discussion board?
-mod board?
-a place where you could put your handles and your locations?

I don't know what to use them for? Any suggestions would be great.

Thanks in advance

Jim B.

I just read the specs and yes, you need the spring, it is part of the
tuned system as it goes between (acts as the coupling) the wire and the
antenna.

These springs make a wavelength difference.

Nice antenna though, I am going to bookmark that site. I just went
'glass and haven't tried out my CB yet.

Hello Bill: Well its appearent that I can't change your mind on anything here. I wish I had the time to ping pong this back and forth.

But you don't know how the signals add up in phase, with the same signal level, in phase, would be a 6 dB increase not 3 db as you said. Any range type ah guy knows this. I have seen this happen quit a few times, throwing the measurements off a bunch. Thats why the antenna has to be tested at different locations and you must have a in hand analytical field strength level figure, for non proper range measurements.

Also I believe you don't have the hands on experence, and really don't have a good arguement. If you should ever want to hire a range or consulant, call me, I can save you some money, buy telling you what they need to hear.

Source record: 79858

Heck, if you want a lot of spectrum that doesn't have many stations (usually only 1!), build yourself a high power wideband FM (or, actually, AM might be fine too - just depends where in the big band ya wants to put it) and try grabbing 54-60 MHz. Skip comes in occasionally. 60 - 66 MHz would be fine too! This is especially good when you're in a fringe zone for channel 2 or 3 television. Nevertheless, even if it is unused in your area, your neighbors watching satellite or cable with channel 2 or 3 out will LOVE to hear AAAAAAUUUDIOOOOO! (then again, they may only see some interesting video effects. Hey, video noise toys!). Just keep in mind what rules are for if someone you love gets killed by a drunk going the wrong way on the interstate. The RF spectrum has to be shared (internationally, at that). Even VHF, UHF, and beyond. These agreements are so that all can share in the spectrum. We don't want a TV station deciding to broadcast on a 'different frequency' to stand out - and grab the local airports' spectrum! While I don't appreciate all of the flames being thrown about, it should behoove all of us to keep in mind why there are rules. (it would also be nice if a few folks would at LEAST reduce the flames below porn level).

Don't expect much range at all from a handheld. A quarter wavelength is 9 feet whilst the typical handheld CB antenna is so small as to act mostly as a dummy load.

My honest suggestion is use the various search engines on 'cb radio' and check out some of the sites and see what they are doing. There are various boards many of which have mods, places to post equipment for sale, message boards, whatever. See which are popular and what seems to work. I'll guarantee you collect some flames on this post, so get on your asbestos long johns!

You can use a different mount, but I doubt your jeep has a fiberglass body.
But if it does, you can find some metal that is connected to the negative
wore or the frame that you can put an antenna on. I use to put them in that
almost 1/2" hole on the back tire rack, drilling it out to 1/2".

Since I have a fiberglass body on my Jeep, I had to get to an antenna
that would support no ground plane. I decided to go with a Firestik
kit since I've heard nothing but good things about them. Here's what
I bought:
http://www.firestik.com/Catalog/NGP_3-Way.htm

This kit comes with a "tuned" coax cable and stainless 3-way mount. I
have to use the cable that came with the kit since it serves as a
tuned circuit that creates the necessary counterpoise. Now, here's my
question: Do I *have* to use the mount that came with it? The spring
is pretty heavy so I'd like to go with a different spring mount if I
can. I already have one similar to this:
http://www.valcoelectronics.com/images/cb80.jpg

Can I use it in place of the 3-way that came in the kit? If the cable
is specially tuned for the "No Ground Plane" antenna, would I defeat
the purpose by using a completely difference mount?

Hey Paul.
If you haven't bought the antenna yet, try the standard $20 firestick.

Mount it wherever you want and run a piece for braided steel ground strap (not for it's electrical grounding capability, but for it's high surface area, since high frequency radio transmission travels on the surface of the conductor) from your antenna mount to your frame.

I'd bet dollars to donuts that you'll get as good a SWR as with an NGP system.

There's enough metallic mass on the frame and drivetrain to provide sufficient groundplane.... contrary to popular belief that it "must" be a big flat horizontal metal surface....heck no open top Jeep has a "big flat horizontal metal surface"....

Cheers,
Paul

5401. Re: RF Burn Hazard, Do not touch antenna while transmitting....

Newsgroup: rec.radio.cb
Date: 2001-04-25 03:11:49 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3AE64075.2E2@bellsouth.net>
Source record: 79869

LOL!

Mad Dog,

I'm not laughing at you, but WITH you. My Mom used to tell me that when I did something goofy, but it didn't seem that way to me!

I've had RF burns, as have many people who deal with transmitters and antennas. I KNOW how they hurt because they go right to the BONE!

Here's two--I gotta give you a chance to laugh back! OK? Many years ago I had an AM mobile transmitter that used a DC Dynamotor to provide the HV to the Plate. Back then, you could find dynamotors for a buck! I had burned out the stator bearings and they were howling like crazy. It was actually cheaper to buy another surplus mil. unit than to rebuild the old one. So I went to a hamfest and dutifully located a nice dyna-motor still in the box. Fifty cents, and I was ready to fix my rig. I got home and, finding that none of the leads were marked, I proceeded to trace out the 4 wires--2 for 12V, 2 for 625V @ 175 mills. I had gotten used to hearing the bearings squall, so when I hooked up the 12V leads, the new unit was SOOO quiet, I forgot to turn it off. I hooked up the HV ground, and.......grabbed hold of the 625V line. I was vibrated, defibrillated, escalated (it felt like I was about to lift off!) and ......it BURNT the hell outta me! OUCH! DAMN! $%&*$#@ SONUVA! Won't ever forget THAT one! LOL! As a matter of fact, I still have that %^&$#@ dynamotor sitting on the shelf in the furnace room--just as a reminder.

The other one was when I, too, was installing an HF mobile in a friend's vehicle. The antenna was on the side of the truck behind the cab and it was high enough I had to use a wooden stepladder--for obvious reasons. I told my friend(?) NOT to key the rig until I told him to. After twiddling awhile, and several trips up and down the ladder to check the SWR and get out of the near field, I went back up, grabbed the whip and ZAP! HOT! So hot, I lost my balance and sorta fell, sorta jumped off the ladder, landing on my feet. Made my legs sore for sev-eral days. HOT DAMN YOU, MORRIS, I TOLD YOU NOT TO KEY THAT %^$#@*$ RADIO"!.....you get the idea.

OK, you can go Hee Hee, now.

Ok, so I was a little more descriptive
than necessary, but I got the point across
didn't I? In your case, you are claiming these
people have sex with dogs, are homosexual,
are child molester and such. That is making a
statement, that the individual you are claiming
is having sex with children, homosexual, sex with
animals, you, on the other hand are slandering
those people. Where, I, was using those words
as colorful metaphor.

You don't seem to have a clue about the bandwidth of the signal your dumping on the air and the effects it has on a FM signal. Nor do you understand the bandwidth requirements for FM either. So much for your so called "technical" knowledge, or lack thereof.

So some how 27.700 is not between the above two numbers? You have to be
kidding me!. Did you go to school and learn to count by any chance?

leland, i'm very aware of the narrow band width my radio produces on ssb. after all a slow scan television signal is only a standard upper sideband signal modulated and unmodulated with beeps and tones. now as far as there recievers can go i can only guess but i will tell you this i recieve no interference from the FM stations at all that are only a kilo cycle or two above me which as you know would make alot of noise for me on usb just below there signals. my equipment is all clean standard amateur gear that you would find on any ham band. it has been tested on the scope and is spectrally clean. i am sure it doesnt bother those guys over the pond a bit when i call cq sstv from here in texas. hell ive even made a lot of sstv contacts into the UK its very active mode there along with packet. you said 27.700 was a uk freq and IT IS NOT. however you said nothing about it being near a UK freq because then i would have had to agree with you.

No Lean. YOUR frustration shows, along with your envy you have for me and the slip under your dress that shows when you are nervous because you do two things. One, you lie. Show one post where I ever used the "F" word. Right. You lie, as usual. And two, you impersonate yourself in drag through supernews. Now that everyone knows you are a liar, sexually confused, a troll who talks to herself and are Sparky, why don't you ease on over to Toledo and give your galpal what she's been asking, no, literally obsessing for? Only you can help her because you are on her level. Now go dine on your fecal matter. You may be dismissed.

> have had to agree with you.

Come on Tim, your smarter than that. You want to split hairs to save face. The frequency you use is used for FM CB in the UK. The problem you cause is no different than if somebody keyed up on on a channel split here in the USA. In that case instead of mucking up one channel now two would be interfered with. The same happens with the frequency your using in regard to FM.

> i am sure it
> doesnt bother those guys over the pond a bit when i call cq sstv from here
in
> texas.

What you really mean is you think your not causing somebody problems. Did you read the note at the bottom of the web page about NOT using SSB signals anywhere in the range where the UK has their FM CB channel allocations? There is also another web page, I posted a while back in reply to one of your posts, showing 11m frequency assignments with a very similar comment about SSB signals on FM channels. So if SSB signals were not a problem as you content then I'm sure the authors of the web pages would not have even bothered to mention it. Since they did it seems clear that SSB signals do in fact cause problems for UK CBers, even if nobody personally bashed you on the air about it. Since you don't run FM you would wouldn't know if a UK CBer was cussing you out about your interference anyway. As they say ignorance is bliss.

I said it was a UK "frequency". The word channel was not used. Read my reply
to you in the other area of thread.

Some mobile CBs 23/40 channel AM only.
1 TRC 458 AM/SSB

1 - Eico 377 Audio Generator $55 shipped

1 Philips Oscope 50 MHz dual trace with probe and cover. Decent shape and traces
$180 shipped.

some other station monitoring type equipment ie; frequency counter, SWR/wattmeter, etc.

3 - "Antron 99s" (bought by RS and packed in their box). ALL 3 are new, but one box was opened for display in my shop. $60 shipped.

This is an equipment and inventory clearance. All items new or used are sold AS IS. I'll assume no liability for bodily harm or death or property damage as a result of improper use or installation.

Reply directly.

Postal MOs only accepted and get same day (M-F) shipping.

Have sold to many in radio newsgroups and on E-BAY. Inquire before buying if you want.

Thanks,

Lou/Tech@DP.NET

What the NG doesn't know (or at least some of them) is that YOU Twisty are
more vugar, and as vulgar, as anything posted in here.
You THINK about gay sex, so why be so scared to talk about it? You IMPLY
gay sex and perversions in your postings, so why not just spell it out? You
can't....because.....you....are.....A PSYCHOPATH!

If I Only Had A Brain
(Sung by TWISTEDHED)

I could wile away the hours
Talking about high power
With my best buddy TRA1N
And my dick I'd be scratchin'
While my headlice were busy hatchin'
If I only had a brain.

I'd unravel any riddle
For any CB crim'nal
In trouble or in pain.

With the thoughts I'd be thinkin'
I could mod a Cobra or a Lincoln
If I only had a brain.

I would not be just a nuffin'
My head all full of stuffin'
My heart all full of pain
I'd steal more land from the masses
An' kick more puppies in their asses
If I only had a brain!

I bought a Cobra 25 LTD Classic off of Ebay a while ago. It has a Connex Echo board in it and I want to take it out. Is that all I need to do is just take it out or do I need to reconnect any wires or anything? Thanks in advance.

Brian

Hi!,
Is it possible to convert a mobile CB to run on
house current?. Would like to run CB without a battery, if at all possible?
(Could it be done and how).

Or would I be better off buying a proper Base station
CB?.

I use to use solar panels, but some bonehead stole them right off my roof!.

You can reply if you want to, but theres a guy that lives in my building who
thinks this is a stupid question.
(You can be sure I won't be asking him for help anymore).

Thank-You , and have a great day or evening where ever you
are.

Back about 1977 there was an item that suddenly became
'cool'.

It was nothing but a little neon bulb that you clipped onto
the tip of your CB antenna.

Now, remember that it takes about 67.5v to trigger a neon
bulb!

Whenever I needed to add just a bit of length to a whip that
someone trimmed just a wee bit too short, I just clipped on
a neon bulb. Most people liked it.

Yawn...your responses get lamer and lamer...and your conclusions more "out there", every day.

FACTS

1. You posted as 1mangang, which got this little roller coaster moving...you felt the need to be anonymous because you wanted to be able to post your judgemental trash in a pseudo-pious fashion on the NG in your twistedhed ID.

2. Any threats you say I made were made AFTER my home, family and animals were threatened with shooting, raping, etc. I certainly don't hear you crusading about the wrongness of that situation. If that in and of itself isn't hypocrisy then what is? The statement that I would hurt no one was made before that date, which your own reposting of the messages shows.
I would like to see your reaction to those threats levied at you.

3. Gay posts? That's a hoot. Look at the forged stuff from Timmy and you: "fatandgayN8WWM", "N8WWMisgay", and several others. When I WAS posting stuff here I wasnt whining about you clowns doing it back at me. I can take it because I know it's all BS. In fact, it was frequently funny to contrast my internal reactions to your 1mangayboy posts with your reaction to getting it thrown at you. It still is.

4. In spite of your words about how I was going to be "fucked", and that I was "g-o-i-n-g" I am still here. The biggest liar is you, because you even lie to yourself. You think no one knows what you have done in your 1mangayboy pseudonym. Many do. However, it only matters in the context of your bitching and whining about all the porn posts, etc. I really don't care, because all the bitching consumes bandwidth, which was the original idea. If you can do it, anyone else can...any other ideation is hypocrisy.

4. Apparently you don't realize it, but I have not even been on here for weeks. my job pressures ease up after tax season, so I packed up the XYL and went to North Carolina for a spot of camping and fishing. Who cares if you believe me, but it is true. Your sniffing is leading you down a false trail, but to proclaim differently would weaken your already ludicrous and hypocritical arguements. You likely know what I am telling you is true, but won't admit it. I do not have to be here...the beat goes on...

5. I don't care in the slightest if you want to keep up blaming me. It will keep the trail cold for the actual participants. there are more than you think. If you want me to come in here with guns blazing, I will be amused to do so. Our tomato plants have to be transplanted in 10 days, and I am also finishing up a 50 mhz KW amp. Time is at a premium so my posts will be brief but virulent.

6. In spite of what you think, you have never seen me, or my photo. That whole gag was set up long ago on purpose. I really don't care what you call me, or where you do it. In fact, start at my front door if you want. My addy is on QRZ.com.

7. You threatened, as 1mangayboy, to print up insults about me and spread the fliers around Dayton. Whoopie. go ahead. In fact, I will be on 145.80 simplex when I am there. Get a legal ham to call me and I will meet you wherever. You can name the place. In fact, bring the 1st flier to me. As previously stated, I will spit in your face. What happens after that will be in direct proportion to your ability to react. That goes for anyone who has a hardon for N8WWM. I have a sign made up, printed in 10 inch high international orange letters, with my call on it. If you want to tap me on the shoulder and take a poke at me, that is also your option, and also the option you would most likely choose.

Gotta go...My wife has reported that ehe has finished the grilled walleye...this "fat and gay" guy has to eat! I spent 7 minutes on you...toodles my boy, toodles...

KEEP POSTING TWISTIEKINS....

Whooooooooowie ... the soon-to-be ex Mrs. Ted Turner still turns my stomach. There are some horror stories (told by former POWs) about her! What really galls me is that forgive and forget is one thing, but often some real creeps end up getting rewarded for their behaviour! (I believe some of the early hackers ended up getting real high paying positions in corporations as security consultants for the computer systems. Talk about hiring the fox to guard the hen house!).

Heck, it can get interesting figuring out who the 'enemy' is. Lots of people are screaming about OPEC - but, from what I see and hear, it appears that OPEC were correct. The price of oil is far from the all time high, yet gasoline and oil prices here are outrageous. Hmmmm ... didn't the big oil companies just turn in reports of record profits? Hey, maybe it's a good idea to have some of the real flamers on the newsgroup. Keeps us all occupied with our collective panties in a knot and not thinking about more important things!

Jerry,
Maaany years ago I was over at a friend's house. We were both kids (I was 16 at the time) and he wanted to see what was inside the octal socket on the back of the rig (an old Johnson Ranger). Another mutual friend was in the shack. I opened it up for him. Later, we were on the air and I noticed I forgot to put the cover back on it. I was going to put it back on but remembered the power was on. I tapped the cover on the shelf - ahhh ... it's ok, it is made of plastic (right!). I put a bear hug on the transmitter with one arm (it was 90 degrees in the shack, I had on a tee-shirt, and I was dripping wet with perspiration) and proceeded to put the cover back on the ZZZZAAAAAAAPPPPPPP! 650 volts DC knocked my across the room and momentarily unconscious. My pals were standing over me really nervous when I opened my eyes and said F**K! The one guy laughed and said 'he's ok'. That really rocked my socks!

BTW, worst RF burn I ever got was when I didn't look at what I was reaching for and hit the line of a 5,000 watt commercial AM station (WWHG, Hornell, NY - 1320 AM) - that laid back a chunk of skin probably 3/8 wide and over 1/16 deep. No bleeding (cauterized instantly), but what a smell!

That's why I limit my play to a 5 watt 440 FM rig!

Don't bother. The group's psychotics have jumped into a pit of
delusional hatred.

"Why no mention of your galpals porn?"

Instead of climbing out and joining the human race, they are attempting
to justify their own behavior by trying to drag others into the pit with
them.

"Oh. You mean like all the times you stick your beak where it doesn't
belong and try to accuse the person you just attacked of starting with
YOU?"

When anyone responds to their posts it just encourages them to post even
more garbage,

"Certainly holds true for you. Pot, kettle, Sparkles!"

which is usually directed at the person who responds.

"Yes, you do that. Your pathetic lies illuminate you like a deer frozen
in the headlights.""

If you want to make yourself a target for irrational spam, that's your
business. I only ask you to think of the group first.

"And THAT, is the gist of it, isn't it Sparkles? Your extreme concern
for the group (snicker).

Message-ID: <2mLF6.639743$f36.18441107@news20.bellglobal.com>
Source record: 79956

Hi, I have an ar88 that apprears to have some minor leakage from the power xformer and one of the "bathtub" filled cans. The radio works A-1 but I know that
the leaking prob needs to be addressed. This was noticed before any real mess has been made inside the radio chassis. I know that the oil filled parts are pcb
and am looking for ideas or possible solutions to fix this. A guy I know said he
has opened up the oil filled cans and have heated them to liquify the oil to then be removed. Re-sealed and re installed. I realize this technique keeps the originality
of the receiver, but i'm thinking of replacing the leaking cans with suitable modern replacements. The same fellow has a never installed ar88 replacement transformer, but i'm wondering if I will just have the same problem with it years down the road. also wondering if all the bathtub cans(6 total) should be replaced now to avoid having to deal with this again in the future when the others start to leak which no doubt they will.

Does anyone have and solutions here other than replacement with modern parts?
Thanks, Jeff

I had a PL-259 come loose on the end of an RG-8
cable once. I was running a Swan 500C, over 400W
output. Anyway, as I adjusted the rig in tune, suddenly
my finger felt funny. I got an RF burn 'around' my finger
under my ring. Took a LONG time to heal, and hurt
like the devil. The whole back corner of my rig looked
like it was backed with fluorescent blue cotton back
by the finals.

Mike

Show the post where I diverted the discussion by 'calling' you on a
typo. Or, better yet, since this seems to be such a big issue for you
because you have brought it up so many times, show all the posts where
everyone mispells a word.

In case you forgot, the point was that most of the people that post
have supernews in the path, even YOUR posts. According to their
homepage, supernews contracts out to over 900 ISPs. Your "coincidence"
is all in your head.

Is this the worst post of mine you can find? Can't you find one where
I brag about beating dogs, or being so stupid that I can't understand
simple logic? Or one where I claim to admit when I'm wrong? Or how
about one where I call someone gay? How about one where I proudly
disclose my intent to kill someone for minor infractions? (Hey, is
freebanding small enough of a crime to justify murder in Florida?) Or
perhaps a post where I declare that something is true JUST BECAUSE I
SAY IT IS? Keep digging, twisted, keep digging through your twisted
little mind. Keep ignoring all the facts while trying to label your
delusions as 'the truth'. And keep quoting PWH -- that's always good
for a laugh.

>Instead of climbing out and joining the human race, they are attempting

>YOU?"

I trolled. You bit. I proved my point. You are too ignorant to realize
what my point is, even though I have said it many times in words that
even you can understand:

>When anyone responds to their posts it just encourages them to post even
>more garbage,
>
>"Certainly holds true for you. Pot, kettle, Sparkles!"

hehehe...

>which is usually directed at the person who responds.

If you do not answer you again prove truth in silence. The grilled Walleye, with a spinach salad, fire baked yam, and cold pear slices for dessert was great. XYL thinks you are a sick SOB if you kill kittens. So do I. You have no room to make any accusations about anything if this is the case. Did you vary your diet today by blowing an Eskimo instead of an Australian Aborigine?

Anyway...Why don't you quietly, truthfully and calmly, without stupid accusations, answer my questions? The majority here knows you do not because you can't without lying more. you have built up such a fantasy in your mind that you cannot tell the truth without crushing your web of lies.

73 twistiekins,

5497. Re: Do not buy from "The CB Shop" of Syracuse New York, USA

Newsgroup: rec.radio.cb
Date: 2001-04-26 05:28:49 UTC
From: Karl Vesterling <kjv@adelphia.net>
Message-ID: <lmOF6.1870$ud6.526783@news1.news.adelphia.net>
Source record: 79972

I'm in Buffalo... Yeah, that pinhead used to have a shop here by the I90 in Hamburg... Must be a great technician... I never saw anyone service a CB using a candle and bent screwdriver for a soldering iron before... ;-)

Seriously though... Here's the poop on that nitwit... That guy out of Syracuse has been TRYING for YEARS to get Doc to work for him. He pays nearly NOTHING, and the CB "shop" in Buffalo NY is/was an old school bus WITHOUT heat and no security. He gets rather RUDE and obnoxious every time Doc refuses his "OFFER"... You tell me if this sounds like an offer you think a good radio tech such as Doc should take:

1) Work for less than minimum wage.
2) Use your own service equipment at the "Shop" (It's an old school bus w/ broken windows)
3) Your own electricity. (??Generator?? Dunno...)
4) Supply your own parts.
5) Send him any and all money you make on repairs.
6) Pay for your own heat / food.
7) When your not sleeping, BE THERE.
8) No, it's not slave labor, it's a learning experience. (Learn what not to do in busines...)

FURTHERMORE... He has a mailing list that you can ask repeatedly to be removed from, BUT he will not remove you from it.

Yeah... I know OF the guy... I'm happy to say we've never been acquainted. The statement above about the candle and soldering iron was purely speculative on what people have said about the last guy that ??worked?? in the school bus.

Feel free to recommend him to your worst enemies... But I gotta say, I'm happy with Doc... Known him since 1985, and he's never done me wrong... Gone out of his way for me more than a few times too!

Doc's site (which I author) is located http://kjv.homeip.net/~hr2510

-- (Yes I'm going to toot my own horn...) -- It's entirely database driven and stuff is added to it all the time. It has a search engine dedicated entirely to CB related web sites... If you have a CB site, send me the URL in E-Mail and I'll be happy to add you into the search database... Nothing like searching for "Cobra CB" on Excite or Lycos and coming up with pages regarding snake handlers named "CB"... None of that on this engine...

Please, tech info related pages only... It's geared more towards people looking for instructions on modifying radios, or where to get parts, etc... Not "Joes Noise Toy Warehouse..." or "Petes jack booted splash monster mega power amp take your own x-rays extra big heat sink vise grip modification

site." Thanks in advance...

5498. Re: ILLEGAL 2510

Newsgroup: rec.radio.cb
Date: 2001-04-26 06:12:01 UTC
From: Karl Vesterling <kjv@adelphia.net>
Message-ID: <R_OF6.1$BM2.808@news1.news.adelphia.net>
Source record: 79973

Saying the Uniden HR2510 is "Illegal" is like saying that an Axe is illegal. The "TOOL" itself is not illegal... Nor the "propper use" of the tool is illegal... It's the ACTION that the use takes... If the use of the 2510 is to transmit outside of 10Meters, then yes... The ACTION of doing so is ILLEGAL...

Same goes for an Axe... If the tool is used to bust mailboxes, or break an entering, THE ACTION, not the tool is illegal...

Next thing you know these nitwits are going to say that someone in their city got murdered with a knife, and we'll all be using wooden spoons to cut our bread with because their solution will be to make all sharp pointy objects illegal...

But, that's ok because the environmentalist whackos will get their panties in a knot once these ultra-paranoid nitwits start chopping down all the trees because someone got an eye poked out with a stick...

Let's take the paranoia of these people a little further into the abyss their minds are swirling in. I would be willing to guess that vehicular manslaughter happens throughout our nation on a daily basis. Exact numbers aren't necessary, but quite frequently none the less. The USE of the vehicle in this matter is a crime... But the TOOL (the car...) is not illegal to own or operate for it's intended use.

So, if you're convinced in your own small ultra paranoid mind that an HR2510 is an illegal radio, THEN you must also conclude that your very own CAR is also illegal. Therefore, you CANNOT sell it, you CANNOT drive it, and you CANNOT own it. So, go junk it... (probably where it belongs anyways...)

Geeeesh... I'm glad I didn't go through the traditional conformity public educational system. Otherwise I might have subscribed to bad living magazine too!

This reminds me of this car I was following the other day. The guy stepped on the gas and a cloud of smoke bellowed from the tailpipe. I sped up to pass, but upon getting to the rear bumper I noticed a series of environmentalist whacko bumper stickers... Just to name a few:

1) Greenpeace
2) Earthday
3) And finally one for NYPERG (some NYS Environmentalist lobbying group I think)

From my observation I must conclude that psychedelic drugs do have prolonged effects...

I hope that I've finally started to unravel this HR2510 Illegal tapestry wound by the paranoid nitwits. Hopefully my tug on this thread will set them straight... Otherwise we'll all be eating with "Sporks" before long because the public educational system has produced a whole generation of paranoid ninny nitwits that lack the ability and the small bit of courage it takes to think and reason for themselves. Subsequently they give up their freedoms for a false promise of "safety" and "well being" without any self reliance.

Sorry for my ramblings, but this paranoia about things/items being illegal is really beginning to annoy me... I was asked the other day by a young adult passing by my house when I extended the drain from my gutter spout to almost reach the street. "Isn't that illegal?" It seems to me that this generation X seems to think that if ANYTHING is done differently it MUST be illegal...

I forget the movie, but it was about a turkish prison, and the inmates walked clockwise around the stone. There wasn't a "LAW" that told them to walk clockwise... But the main character in the movie decided to walk counter clockwise around the stone one day. The other inmates got angry and tried to push him the other way. My point in mentioning this is that there seems to be a similarity between the inmates in the movie and going clockwise around the stone. These nitwits and ninnys who insist the HR2510 is an illegal item to own/operate/sell in any circumstance are seriously devoid of any analytical thinking skills. I would be willing to say that they are only "reactive" creatures and "feel" more than "think"...

UK radios do not use VFO's theres is a service similar to ours in the fact
there are set "channels" so your use of the term frequency was way to broad.

Source record: 79982

No bigger conspiracy than anyone that uses webtv, as I think I pointed out a few days ago but you ignored like any other factual post.

Sure it is. Since you lie to ignore the obvious and want it spelled out for you, it is a coincidence you and Leland both always have the same path. It is a coincidence that you and Leland both lie. It is a coincidence that you and leand are both ignorant in the same subjects. It is a coincidence you and Leland crossdress between access sites (supernews) when there is no apparent reason to do so other than to play with each other. It is a coincidence that every single post on this entire ng that has ever, ever agreed with anything you have ever said has come from supernews/and/or is on of your drag personas, at home.com, such as Badabing, whom I created in the first place.

Glad I could keep you laughing, sparkles, sure beats your pathetic whining, pleading, crying and begging me to leave you alone and go away. That was getting old, plus, how humiliating for you.

Let's review. I have single handedly been responsible for you attempting blackmail upon the group (for each piece of illegal equipment destroyed, you would see to it that N8 was quiet for a day..hahaha), begging the group for a week straight (make twisted go away) more blackmail (If twisted doesn't leave, I'll..I'll..uh,..I'll..), numerous threats (Wah! Ng won't play my way! Wont get rid of twisty. Gonna start my OWN ng.) and finall reduced to begging (anyone wanna play in my ng where Twisty can't go?), and finally, defeat through rejection with no takers, which has been your problem all your life....rejection.

How is your moderated ng. coming along? You remember the one. The one where you pathetically cried for members, even begged for them...been building it for some time...how many members you have so far? Now THAT is humiliating.
Hey! I know, you can take the two friends that you do have here and start that group and troll and call each other names, A perfect fit,,Dogie does it, you support it and enjoy it, so why keep fostering your filth upon the group? After all, it IS the group you are so concerned with, isn''t it Sparkles? You did say that, many times. Also said you were leaving. Why are you still here? Oh, that's right. You lied again.
Yep! You sure showed me.
:) Nuthin' left to do, sparkles, but smile, smile, smile!

5508. Re: IF DOGIE was only normal, then the following would not apply...

Not even about saying I lied about the local court case? Your'e a laugh a second!
Sparky, FLCD

As I stated, glad to keep you laughing.
No, you are a lie a second.
The case was not local to you at all.
You get mental masturbation jollies by shooting your mouth of quicker than you have time to think. Always asking rapid fire questions instead of answering your lies somehow boosts your low self-esteem. You suffer from an Ostrich complex. You stick your head in the dirt and close your eyes and convince yourself that no one but you can see anything taking place. That arrogance thing again. You consistently insult the very ones you profess to care the most about, the entire ng. Your days of wishful thinking and "if I say it enough, it must be true". are over except for in your own little dysfunctional world. You may carry on, carry on,.

The gas prices are higher, but I don't think they are too bad all things considered. In the last several years alone, the price of a barrel of crude has TRIPLED, yet the price we pay at the tank hasn't tripled in that same allotted time span. True, we are getting the shaft, but we asked for it with a smile. Check out what our neighbors pay by the liter. The alternative energies to reduce our demand on fossil fuels should have been implemented long ago. Now it is too late. They could charge whatever they want and the majority of us will still buy it, we have no choice and they know it. The govt needs our dependence on oil now....and the fatcats at the oil companies ain't gonna kick up them bonuses to drop the price any. What ever happened to the farmer that created the cow pattie engine? I know GM is making electric cars.

If you do not answer you again prove truth in silence. The grilled Walleye, with a spinach salad, fire baked yam, and cold pear slices for dessert was great. XYL thinks you are a sick SOB if you kill kittens. So do I. You have no room to make any accusations about anything if this is the case. Did you vary your diet today by blowing

"Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity..".

an Eskimo instead of an Australian Aborigine?
Anyway...Why don't you quietly, truthfully and calmly, without stupid accusations, answer my questions? The majority here knows you do not because you can't without lying more. you have built up such a fantasy in your mind that you cannot tell the truth without crushing your web of lies.
73 twistiekins,
Keep the faith! <lol>

Is this the worst post of mine you can find?

"Uh, I didn't go looking."

Can't you find one where I brag about beating dogs,

"So now your feish goes from gay porn to beastiality. Whacko!"

or being so stupid that I can't understand simple logic?

"I am sure if I invested the time it would be no problem."

Or one where I claim to admit when I'm wrong?

"No. That proves MY point."

Or how about one where I call someone gay?

"How about many where you defend him? Even acting as armchair lawyer, arguing for him, long before I lifted my leg and urinated on your dress. You two must be close., "

How about one where I proudly disclose my intent to kill someone for minor infractions?

"Dunno. Sounds like a personal problem to me."

(Hey, is freebanding small enough of a crime to justify murder in Florida?)

"I dunno. Why don't you try and do it from someones shack here that you have directions to in the middle of the night and find out. "

Or perhaps a post where I declare that something is true JUST BECAUSE I SAY IT IS?

"I posted those already. You were just too angry at me to see them and remember them."

Keep digging, twisted, keep digging through your twisted little mind.

"I don't have to dig with a couple of stray mutts like you gals. You and Dogie have been frolicing in the fecal matter just fine. You even managed to roll in it a few times."

Keep ignoring all the facts while trying to label your delusions as 'the truth'.

"(Yawn)."

And keep quoting PWH -- that's always good for a laugh.
Instead of climbing out and joining the human race, they are attempting to justify their own behavior by trying to drag others into the pit with them.

"Oh. You mean like all the times you stick your beak where it doesn't belong and try to accuse the person you just attacked of starting with YOU?"

I trolled. You bit. I proved my point.

"Hahaha. No. You proved MINE! You're just too ignorant too know it."

You are too ignorant to realize what my point is,

"No. You have no point. You are a troll. I called you for what you were when you first shook your tailfeathers my way. And that was quite a while ago. You were the one said you were going to do this, do that, etc. All you do is lie and troll. You have no point other than begging for my validation of you.. You patrol this ng for me and I reply at my leisure, while you sweat and shake like a junkie waiting for me to reply, all because I validate you. Without me, you are nobody. Even the 3 or 4 occasional losers that supported you in the past have deserted you. All you have now is Dogie. What a support group, eh? Hey, I know, go make us a coincidence and bring yon forth some drag personas now to pat you on yon fat fanny to appear that you have some support."

"Sure, I'll dance with ya' Dogie. What ticked you off bad enough to take off the dress and post under your real addy?"

facts, not conjecture...

"Facts are backed by evidence. YOU, my chubby chickiehawk, need a vocabulary lesson."

Group: rec.radio.cb Date: Wed, Apr 25, 2001, 11:16pm (EDT+4) From: N8WWM@arrl.net
Yawn...your responses get lamer and lamer...and your conclusions more "out there", every day.

FACTS

1. You posted as 1mangang,
which got this little roller coaster moving

"Wrong. You were getting your ass slapped so bad and just naturally assumed it was me. Now you, not unlike sparkles, want soooooooo bad for things to be the way you girls say they are. You, Dogie, never had any credibility. You came in here and immediately attacked everyone, thought you were going to take over, thought that the "lowly cbers" would lay down and kiss your ass because of your ticket. When you got your clocked cleaned in here, you retreated into being some gay sex perved lunatic".
.
you felt the need to be anonymous

"Which is why I posted directions to my front gate. Twice."

because you wanted to be able to post your judgemental trash in a pseudo-pious fashion on the NG in your twistedhed ID.

"And just HOW long has it been since you posted under your own name? Pot, kettle, black."

2. Any threats you say I made were made AFTER

"Oh, is THAT your justification? Someone threatens you so you threaten someone you THINK it was? I have your threats, pal. Every lovin' single one you ever made. If they weren't you, then you have nothing to worry about right? I know I don't. But that didn't stop you from spewing your venom my way did it?"

my home, family and animals were threatened with shooting, raping, etc. I certainly don't hear you crusading about the wrongness of that situation.

"Yes, I did. Go find it. I said go do whatever you have to."

If that in and of itself isn't hypocrisy then what is?

"It's hypocrisy because I didn't jump in and defend YOU? From someone else? LMAO!"

The statement that I would hurt no one was made before that date, which your own reposting of the messages shows. I would like to see your reaction to those threats levied at you.

"You saw my reaction to you and Leland's threats. I don't take either one of you serious. Why would anyone take anything an anonymous person said seriously? That speaks more about the person believing it."

3. Gay posts? That's a hoot. Look at the forged stuff from Timmy and you: "fatandgayN8WWM", "N8WWMisgay", and several others.

Exactly. Atleast you had the good sense this time to say, "several others." Dogie, you pissed off the entire cyber cb world, and then some. Surely you can't be that ignorant as to think only Tim and I would be upset with you enough to (gasp) flame you."

When I WAS posting stuff here I wasnt whining about you clowns doing it back at me. I can take it because I know it's all BS. In fact, it was frequently funny to contrast my internal reactions to your 1mangayboy posts with your reaction to getting it thrown at you. It still is.

"If it's all fun, why can't you do it without being threatening or vulgar?"

4. In spite of your words about how I was going to be "fucked",

"You will not find that word anywhere in any of my posts. And THAT, is a fact."

and that I was "g-o-i-n-g" I am still here.

"Taking Leland lessons? You guys forged me, then reported the forged posts to webtv (which shows that the computer grads intelligence and fat fingers were at work here) in hopes of getting me to leave. You tried blackmailling the group, threatening the group, etc. All in your poor, misguided effort to get me to leave,"

The biggest liar is you, because you even lie to yourself

"I consider the source and smile."

You think no one knows what you have done in your 1mangayboy pseudonym. Many do.

"Definite leland lessons. Stop thinking or caring so much what others may or may not think and clean your own back yard. It's full of sewage."

However, it only matters in the context of your bitching and whining about all the porn posts, etc. I really don't care, because all the bitching consumes bandwidth, which was the original idea. If you can do

it, anyone else can...any other ideation is hypocrisy.

"It is obvious you learned some new words in the above statement and needed to try them out."

4. Apparently you don't realize it, but I have not even been on here for weeks. my job pressures

"Dogie. You don't get it. I got stuff about you I didn't even want, it just came. You are unemployed. You don't work. You receive a government check each month. You don't live at the address you have listed. You are not married. Not legally anyway. You are a pain in the ass on the hammie bands. You have a reputation as a know-it-all and only two locals will even talk with you on your repeater, but even they don't consider you a friend. Your neighbors think something is wrong with you. So blow your smoke somewhere else."

ease up after tax season, so I packed up the XYL and went to North Carolina for a spot of camping and fishing. Who cares if you believe me, but it is true. Your sniffing is leading you down a false trail, but to proclaim differently would weaken your already ludicrous and hypocritical

"You like that word don't you?"

arguements. You likely know what I am telling you is true, but won't admit it. I do not have to be here...the beat goes on...

"The lies go on."

5. I don't care in the slightest if you want to keep up blaming me. It will keep the trail cold for the actual participants. there are more than you think. If you want me to come in here with guns blazing, I will be amused to do so. Our tomato plants

"Whaaaaa?"

have to be transplanted in 10 days, and I am also finishing up a 50 mhz KW amp. Time is at a premium so my posts will be brief but virulent.
6. In spite of what you think, you have never seen me, or my photo. That whole gag was set up long ago on purpose.

"Yea, that's why you pulled it down so quick.
"Ok Dogie, where are you goin with THIS one?"

I really don't care what you call me, or where you do it. In fact, start at my front door if you want. My addy is on QRZ.com.

"Wrong again. You made the threats my way. I never threatened you. And you don't live at the address you listed."

7. You threatened, as 1mangayboy, to print up insults about me and spread the fliers around Dayton.

"See above."

Whoopie. go ahead. In fact, I will be on 145.80 simplex when I am there. Get a legal ham to call me and I will meet you wherever. You can name the place. In fact, bring the 1st flier to me. As previously stated, I will spit in your face.

"The charm that earned you your well deserved reputation..You won't do jack, Dogie. You have threatened me with everything from that to the cops to the feds to lying about me to forging me...you are impotent, which is why you masquerade in drag."

What happens after that will be in direct proportion to your ability to react. That goes for anyone who has a hardon

"Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity."

for N8WWM. I have a sign made up, printed in 10 inch high international orange letters, with my call on it.

"AHAHAHAHHAHAHAH! Dogie hired a body guard for the hammie fest. AHAHAHHAA! So thats' where you were going with the picture thing..ahahahahah! Can't say I blame you though. After all those things you said about techs being drug dealers and the allegations you made, man, I would to. Matter of fact, if it were ME that made those foolish remarks, I wouldn't even go."

If you want to tap me on the shoulder and take a poke at me, that is also your option, and also the option you would most likely choose.

"No. Not everyone is like you Dogie. See, you and your two gal pals are the ones that hide, hide behind phony names and anonymous email."

Gotta go...My wife has reported that ehe has finished the grilled walleye.

"Sure she did. Did you hire her for a day, too?"

.this "fat and gay" guy has to eat! I spent 7 minutes on you.

"Kind of obsessing on the time, are we not?
Almost as if you were trying to prove I didn't consume your every waking thought and show I don't have complete and dominating control over you like I do sparkles. Whatever. Let's see, total time elapsed...hmmmm,..YOU beat me, Dogie! I have spent almost 12 minutes embarrassing you this time, compared to your paltry 7 at saving face, only you have nothing left to save."

.toodles my boy, toodles...
KEEP POSTING TWISTIEKINS...

"Go grab a Harper's Bazaar! :) You say you aren't gay. What kind of man speaks to another with such endearing terms and fondness? Is that native to Toledo or something? Oh well, if it keeps you from repeated porn posting, I give you permission to use it.""

5516. Re: 2 element beam antenna

Newsgroup: rec.radio.cb

Hello Red Wolf 584:

Look at the web site here, its MaCo's antenna assembly and instruction manuals for their antennas, includes dimensions and great diagrams. A few guys have made their own beam, and bought the mast to boom mounts, and gamma matches from these guys to complete their antenna.

http://www.majestic-comm.com/maco/support/index.htm

Buying the materials, drilling, and assembling the antenna is a lot of fun, until you get to the tuning part. A good suggestion here is to copy one or buy one of the beams shown by the MaCo page. Its makes things many dollars easier, in the short, medium, and long run.

As Richard said it would be better to go to a 3 or 4 element beam, as compared to a 2 element beam, for more gain and rejection, plus it looks great. However the PDL-II is a Two Element Quad Beam Antenna that works really well, and it will go both vert and horz.

I never get upset and use foul language like you did in another post. In fact I don't get upset at all. That really seems to bug some people on this news group. 8-))

> if you meant it was near a Uk freq and not exactly on one

All your doing Tim is just trying to save face. Smart people don't need to have everything spelled out to them in detail. If you knew anything about radio, as you claim you do, then you would know if the signal is in the passband of the rig in question it's going to cause a problem. That last comment of mine is a direct follow on, to a comment in a prior post of mine, when I quizzed you about the bandwidth requirements for the signals in question. Do you even know what the "typical bandwidth" requirements are, and how far apart two stations have to be frequency wise not to interfere with one another? I'll give you a hint, what works for sideband won't work for FM. Here's one more zinger, do you know how to receive FM using only the AM function on your pirate rig? Don't say it can't be done, I know better. When done right you almost can't tell the difference between AM and FM.

Nice approach and probably far better than mine.

The PDL-II is a bandit on ten as well. But quads, loops, and yagis are
different beasts.

Have you ever encountered the Mosely tri-banders? They managed to do it
all on one trap, fed the thing directly with no match, and would sell it
to you a piece at a time (rotary dipole, 2-element, 3-element) as your
bankroll allowed. Not sure I would recommend them today as the company
has gone thru several hands since Old Man Mose. It was no match to a TH3
Hy-Gain but it wasn't bad.

Greetings!

On Wed, 25 Apr 2001 19:48:33 GMT, while the modem was ice fishing with
the Mouse, "Lennie Beecroft" <lbeecroft8041@home.com> dissertated the
following:

:+> Hi!,
:+> Is it possible to convert a mobile CB to run on
:+> house current?. Would like to run CB without a battery, if at all possible?
:+> (Could it be done and how).

Yes, you'd need a power supply, it converts 120 Volt AC household
current to 13.8 volts DC - use a regulated power supply. A simple
Wal-Mart Wall-Wart will not work.

Radio Shack or any Electronics store should have something in stock to
help you.

As far as current you'll need to power it with the voltage - I
recommend that you get at least a 3 amp capacity power supply, with a
10 amp power supply being more than adequate.

:+> Or would I be better off buying a proper Base station
:+> CB?.

A dedicated CB base station would look cleaner but the concept is the
same - use a mobile radio inside a box with it's own power supply.

:+>
:+> I use to use solar panels, but some bonehead stole them right off my roof!.
:+>
:+> You can reply if you want to, but theres a guy that lives in my building who
:+> thinks this is a stupid question.
:+> (You can be sure I won't be asking him for help anymore).

I think you might already know where those solar panels went...

Thanks a million. But I didn't know about the reflector being a 15%
percent longer to gain bandwidth, and the other data you menationed. I
copied your posting to a special antenna file that I keep. A lot of
questions fly out here and on rec.radio.amateur.antenna newsgroup.

If one just reads the mail, you can learn a bunch. I have copied a lot
of opinions and written descripitions that are pretty close to dead nuts

on, and some that are out in left field a liitle. But thats how it goes ah?

> The PDL-II is a bandit on ten as well. But quads, loops, and yagis
> are different beasts.

Yes I agree with that big time. But the PDL-II worked so well, while only needing a small rotor, but still needed a pretty good mast to keep it up. One big problem was a lot guys installed it up on a push-up mast, with the last ten foot section not having guyed wires installed, leaving the top small diameter, thin walled section of the push-up to be bent in high winds. Also the guy wires would effect the quad beam performance. It forced you use a small tower, and still have a good mast.

> Have you ever encountered the Mosely tri-banders? They managed to do

> the company has gone thru several hands since Old Man Mose. It was no > match to a TH3 Hy-Gain but it wasn't bad.

No can't say that I had any experence with those beams. But I did have a 3 element type 20, 15, and 10 meter tri band beam, don't know the manufacture. The way to short bandwidth deemed them not a good deal to me. I can see why the guys will stack the mono band beams.

>
> Dick Nï¿½BK

I had a old Hy-Gain 5 element for 20 meters, at 60 feet, and it worked great. And the neat thing about this 20 meter beam was that it looked much like the construction of the Hy-Gain Penetrator 500 5/8 ground plane antenna. They used the reduced swaged aluminum tubing that was heat treated after the swaging, I believe.

Those posting the endless "that's criminal" you are a "criminal" illegal type posts need to realize that these things really aren't "Criminal". A criminal act ASSumes you broke a "LAW", & are innocent until proven guilty, and can be "ARRESTED", & can/will have your day in court. FCC regulations, on the other hand, are not "LAWS", No state or federal court will have any juridiction over an FCC "fine", You are Guilty & can't go to any court or Jury to complain, You can't be "ARRESTED" because you have a modified President CB. It's the same as, say, the US Postal Service chief writing a dress code "Regulation" that says, "No Mail Carrier shall wear Sneakers or Earrings while on the job, & you will be fined $250 each time you are caught". If a couple of workers get togeather to wear earrings, they aren't "CRIMINALS doing Illegal ACTS", they are just breaking a federal regulation, not THE LAW. Just like an FCC rule, they, if caught, won't be Arrested, Can't go to "court" to be proven innocent, & can't be "Arrested".....KIDS Playing with extra channels in their Cobra CB radios AREN'T CRIMINALS, they are breaking a small federal Regulation that is seldom enforced & little known/understood by the public, & can be fined if caught.....Lighten UP, Idiots!!!

Gosh, Twisted. This "stuff" you "got" seems to put Dougie in a very bad light.
I assume you have the evidence to back it all up. How about posting it for
all to see?

Unless of course, you're lying about it.

In which case you CAN'T post any evidence. Because there ISN'T any. So...

(a) you'll have to make up some squirrely reason why you can't produce it.
Or,

(b) you'll have to deny you said anything in the first place. Or,

(c) you'll have to avoid the issue altogether in the future.

You really stepped in your own shit this time, pal.

Ok, let's compare the relavent lines from each of our headers:

>Path: sn-us!sn-post-01!supernews.com!corp.supernews.com!not-for-mail
>Path: sn-us!sn-post-02!sn-post-01!supernews.com!corp.supernews.com!not-for-mail
Yep, they sure do look similar.

>From: "Leland C. Scott" <no-spam@junk-mail.net>
>From: sparky@cet.com (Sparky)
hmm...

>Organization: Posted via Supernews, http://www.supernews.com
>Organization: Posted via Supernews, http://www.supernews.com
Yep, the same.

>Message-ID: <tee56ajh8flffd@corp.supernews.com>
>Message-ID: <3ae740cf.1290023@news.cet.com>
well ... not quite. I wonder just how anyone can forge or modify the
message ID. Any clue, twisted?

The rest of Leland's:
>X-Priority: 3
>X-MSMail-Priority: Normal
>X-Newsreader: Microsoft Outlook Express 5.50.4522.1200
>X-MimeOLE: Produced By Microsoft MimeOLE V5.50.4522.1200
>X-Complaints-To: newsabuse@supernews.com
>Lines: 27
>Xref: sn-us rec.radio.cb:255450

and the rest of mine:
>X-Newsreader: Forte Free Agent 1.11/16.235
>X-Complaints-To: newsabuse@supernews.com
>Lines: 34

>Xref: sn-us rec.radio.cb:255460

Well, by golly, there really ARE some differences. The message IDs are a world apart. He uses OE, I use FA. The format of his headers are different and use more lines than mine. They show quite a bit more difference than posts from two different webtv subscribers. By your logic (or lack thereof), every post from a webtv account has been made by you!

> It is a coincidence that you and Leland both lie.

Well, let's see now. If you created Badabing,

"I did by proxy. I made a comment and popped your stupid nic as "'bing".

and Badabing is Moparholic

"You are he."

, then you are all three.

"How can I be you? Unless you believe you are me. You just may, you have
been admiring me for so long."

I can pin down Mopar's DSL line to NJ

"Congrats."

routed out of PA.

"And yours has been pinned routed through many, many tracks."

Didn't you say you were in Florida?

"I don't know. Did I?"

So you have a regular ISP using a real computer, and use the webtv for
use when you travel to your other residence.

"I'm dirt poor and live in a housing project, remember?"

So just what aliases have you used using your computer?

"I need no aliases..unlike you and your gal pals."

In other ngs?
<snip diversionary BS>
Damn, twisted, you just keep choking on your own nuts.

"No. You are choking and they aren't even your..never mind. Nice to see
your mindest is also equal with Dogie. Is your roster membership for
your ng full yet? You know, since you can't get invited into any of the
moderated groups 'round here."

Where? I didn't read anything about taxes in your post, probably
because you didn't mention it. Duh...

> The
>revenue from our dependency on oil.

You said, "The govt needs our dependence on oil now..." Where do you
see the word 'revenue' or 'taxes' there? Nowhere.

> Is this where you now begin to
>repeat what I say and claim it as your own nary one post later?
>(snicker) Why not? It's the only credit you will ever get. Even Dogie

Not only can't you read, but you can't even understand what you are
writing! And then you accuse someone of using your words when you
don't even know what your words mean! HAHAHAHA!!!!!!! Keep posting,
twisted. Keep demonstrating just how much of a nitwit you are! hehe...

Sparky, can't stop laughing ... hehe ...

You are still humping the wrong leg. What's the problem? Didn't I make
this post simple enough even for YOU to understand? Or is this just
another 'challenge' that you prefer to ignore? I understand that the
comprehension part might be challenging for you, so please tell me
what part you didn't understand, and I will translate it into redneck
english for you:

Please try.

> it is a coincidence you and Leland both always have the same
>path.

Ok, let's compare the relavent lines from each of our headers:

>Path: sn-us!sn-post-01!supernews.com!corp.supernews.com!not-for-mail
>Path: sn-us!sn-post-02!sn-post-01!supernews.com!corp.supernews.com!not-for-mail
Yep, they sure do look similar.

>From: "Leland C. Scott" <no-spam@junk-mail.net>
>From: sparky@cet.com (Sparky)
hmm...

>Organization: Posted via Supernews, http://www.supernews.com
>Organization: Posted via Supernews, http://www.supernews.com
Yep, the same.

>Message-ID: <tee56ajh8flffd@corp.supernews.com>
>Message-ID: <3ae740cf.1290023@news.cet.com>
well ... not quite. I wonder just how anyone can forge or modify the
message ID. Any clue, twisted?

The rest of Leland's:
>X-Priority: 3
>X-MSMail-Priority: Normal
>X-Newsreader: Microsoft Outlook Express 5.50.4522.1200
>X-MimeOLE: Produced By Microsoft MimeOLE V5.50.4522.1200
>X-Complaints-To: newsabuse@supernews.com
>Lines: 27
>Xref: sn-us rec.radio.cb:255450

and the rest of mine:
>X-Newsreader: Forte Free Agent 1.11/16.235
>X-Complaints-To: newsabuse@supernews.com
>Lines: 34
>Xref: sn-us rec.radio.cb:255460

Well, by golly, there really ARE some differences. The message IDs are
a world apart. He uses OE, I use FA. The format of his headers are
different and use more lines than mine. They show quite a bit more
difference than posts from two different webtv subscribers. By your
logic (or lack thereof), every post from a webtv account has been made
by you!

> It is a coincidence that you and Leland both lie.

You are right on target. I am the human race, all 6.5 billion of them,
and we are all out to get you, twisted. hehehehe!

> It is a
>coincidence that you and leand are both ignorant in the same subjects.
>It is a coincidence you and Leland crossdress between access sites
>(supernews) when there is no apparent reason to do so other than to play
>with each other.

Go take your meds.

Gosh, Twisted. This "stuff" you "got" seems to put Dougie in a very bad light.
I assume you have the evidence to back it all up. How about posting it for
all to see?

Unless of course, you're lying about it.

In which case you CAN'T post any evidence. Because there ISN'T any. So...

(a) you'll have to make up some squirrely reason why you can't produce it.
Or,

(b) you'll have to deny you said anything in the first place. Or,

(c) you'll have to avoid the issue altogether in the future.

You really stepped in your own shit this time, pal.

I AM USING CAPS NOT TO SHOUT, BUT TO DELINEATE THIS POST FROM PREVIOUS ONES...I ask your indulgence.

What ticked you off bad enough to
NOTHING AT ALL, I WASNT TICKED...just amused...

"Facts are backed by evidence. YOU, need a GOOD LAUGH OCCASIONALLY, AND SO POST HERE TO GET A RISE OUTTA YOU, WHICH HAPPENED.

Yawn...your responses get lamer and lamer...and your conclusions more"out there", every day. THAT ONE STILL STANDS.
FACTS
1. You posted as 1mangang, which got this little roller coaster moving NOPE, THAT ONE STILL STANDS...YOU WERE SNITCHED OUT. QUIT LYING.

You were getting your ass slapped so bad SLAPPED? HELL< I HAD ALL YOU GUYS SCREECHING WITH THOSE POSTS...SLAP AWAY...I AM BANDWIDTH WASTE MOTIVATED!
You came in here and immediately attacked everyone, AND GOT JUST WHAT I WANTED. YOUR LENGTHY RESPONSE NOW SHOWS THAT IS CONTINUING TO BE TRUE.

>you were going to take over,ACTUALLY THOUGHT WE COULD PISS OF A BUCH OF CLOWNS: WE DID...
thought that the "lowly cbers" would lay down and kiss your ass because NOPE JUST THOUGHT IT WOULD BE FUNNY TO MAKE YOU CLOWNS JUMP...IT IS IT IS IT IS.

you retreated into being some gay sex perved lunatic".NOPE, I RESPONDED IN KIND AFTER THAT GOOFY WEB PAGE ONE OF YA MADE. I JUST DID IT MORE THAN YOU CLOWNS. RESPONSE BEING THE KEY HERE...CHECK THE CHRONOLOGY. BTW, THAT PAGE IS A HOOT.

you felt the need to be anonymous

Which is why I posted directions to my front gate. Twice."
THAT MY BE SO, BUT YOU NEVER ADMITTED TO BEING 1MANGAYBOY...THIS PARTICULAR RESPONSE OF YOURS TOTALLY DODGES THAT FACT.

because you wanted to be able to post your judgemental trash in a pseudo-pious fashion on the NG in your twistedhed ID. THAT ONE STILL STANDS.

"And just HOW long has it been since you posted under your own name? FREQUENTLY, JUST NOT HERE.
TWISTIE, MIRROR, 1MANGAYBOY."

2. Any threats you say I made were made AFTER

"Oh, is THAT your justification? YES IT IS. AND IT IS INDEED JUSTIFICATION. Someone threatens you so you threaten
someone you THINK it was? I have your threats, pal. Every lovin'

single one you ever made. GLAD TO HEAR YOUR HARD DRIVE IS FULL OF THIS STUFF ON HERE. YOU ARE CORRECT, I HAVE NO WORRIES IN THE MATTER. IF I WAS YOU I WOULD CONTACT THE LAW IF YOU HAVE FEARS THAT THERE ARE CREDIBLE THREATS MADE AGAINST YOU.

my home, family and animals were threatened with shooting, raping, etc. I certainly don't hear you crusading about the wrongness of that situation.

"Yes, I did. Go find it. KINDLY REPOST ANYTHING YOU SAID THAT CONDEMNS PHYSICAL THREATS.
If that in and of itself isn't hypocrisy then what is?

"It's hypocrisy because I didn't jump in and defend YOU? NOPE, NOT AT ALL. I MEAN, AND YOU KNOW THAT THIS IS WHAT I MEANT...THAT SOMEONE WHO MAKES PHYSICAL THREATS OVER THIS SHIT IS GOOFY IN THE HEAD.

The statement that I would hurt no one was made before that date, which your own reposting of the messages shows. I would like to see your reaction to those threats levied at you.

"You saw my reaction to you and Leland's threats. I don't take either one of you serious. Why would anyone take anything an anonymous person said seriously? That speaks more about the person believing it." NOPE, THAT IS A FALLACIOUS TRAIN OF LOGIC. IN ORDER FOR A THREAT TO BE SUCCESSFULLY CARRIED OUT, WITHOUT ANY COMEBACKS ON THE PERPETRATOR, ANONYMITY IS A FREQUENTLY USED DEVICE.

3. Gay posts? That's a hoot. Look at the forged stuff from Timmy and you: "fatandgayN8WWM", "N8WWMisgay", and several others.

Exactly. Atleast you had the good sense this time to say, "several others." Dogie, you pissed off the entire cyber cb world, and then some. THAT MEANS THAT THE TASK UNDERTAKEN WAS ACCOMPLISHED. IF SOMEONE IS DUMB ENOUGH, LIKE SWANGTHANGWIMP, TO POST PHYSICAL THREATS, THEY ARE THE ONE IN THE WRONG.

Surely you can't be that ignorant as to think only Tim and I would be upset with you enough to (gasp) flame you." FLAME AWAY, IT IS OF GREAT AMUSEMENT!

When I WAS posting stuff here I wasnt whining about you clowns doing it back at me. I can take it because I know it's all BS. In fact, it was frequently funny to contrast my internal reactions to your 1mangayboy posts with your reaction to getting it thrown at you. It still is.

"If it's all fun, why can't you do it without being threatening or vulgar?" FIRST, IT IS NO LONGER ME POSTING AND HAS NOT BEEN FOR A LONG TIME. SECOND, I ASK YOU, WHAT THREATS? NEVER HAVE I POSTED ANY SORT OF PHYSICAL THREAT EXCEPT TO SPIT IN THE FACE OF ANYONE HARASSING ME IN PERSON.

4. In spite of your words about how I was going to be "fucked", and that I was "g-o-i-n-g" I am still here.

"You will not find that word anywhere in any of my posts. And THAT, is a fact." YES IT IS A FACT, YOU DID IT AS 1MANGAYBOY. QUIT LYING.

"Taking Leland lessons? You guys forged me, then reported the forged posts to webtv (which shows that the computer grads intelligence and fat fingers were at work here) in hopes of getting me to leave. You tried blackmailling the group, threatening the group, etc. All in your poor,misguided effort to get me to leave," FIRST, I DO NOT THINK LELAND IS INVOLVED, AND THE SQUEALING TO WEBTV, WHILE NOT BEING AN ACT OF MINE, IS KINDA FUNNY NOW THAT YA MENTION IT.
EVEN FUNNIER WHEN YOU CONSIDER THAT YOU AND OTHERS HERE WERE CRYING TO ISP'S ONE HELL OF A LOT LONG BEFORE THAT HAPPENED. HMMMMM...DOES THE WORD RESPONSE MAYBE FIT HERE AS WELL?

The biggest liar is you, because you even lie to yourself
ABSOLUTELY TRUE AND BORNE OUT BY YOUR RESPONSES HERE.

"I consider the source and smile."
THATS COOL, SO DO I.

You think no one knows what you have done in your 1mangayboy
pseudonym. Many do. STILL TRUE

"Definite leland lessons. Stop thinking or caring so much what others may or may not think and clean your own back yard. It's full of sewage." NOPE, I DONT CARE...EXCEPT TO THE EXTENT OF THE HUMOR I FIND IN YOUR SERIOUS DEBATE HERE...LOL

However, it only matters in the context of your bitching and whining about all the porn posts, etc. I really don't care, because all the bitching consumes bandwidth, which was the original idea. If you can do it, anyone else can...any other ideation is hypocrisy. STILL TRUE AND STILL HAPPENING!

"It is obvious you learned some new words in the above statement and needed to try them out." LOL...GOOD POKE...FOR A FIFTH GRADER!
4. Apparently you don't realize it, but I have not even been on here for weeks. my job pressures...

"Dogie. You don't get it. I got stuff about you I didn't even want, it just came. You are unemployed. NOPE You don't work. NOPE You receive a government check each month.NOPE, NAME THE AGENCY... You don't live at the address you have listed. NOPE SEND ME A LETTER IF YOU WANT, I WILL SCAN AND SEND THE COPY TO YA. You are not married. Not legally anyway. NOPE, IN 12th YEAR OF MARRIAGE, IN FACT. You are a pain in the ass on the hammie I AM ON 6 AND 2 SSB AND THATS IT...AND KNOWN THERE AS THE GUY TO COME TO FOR DESIGNS, ADVICE, ETC...THAT WORKS.
You have a reputation as a know-it-all and only two locals will
even talk with you on your repeater, FUNNY, CUZ I DO NOT USE REPEATERS UNLESS TRAVELING. HAVE NOT FOR AT LEAST 4-5 years. even they don't consider you a friend. LOL...MY AMATEUR FRIENDS EMAIL ME STUFF TO PASS ON TO THE CURRENT POSTSERS ALL ALONG. Your neighbors think something is wrong with you. MY NEIGHBORS AND THEIR 2 KIDS HAD EASTER DINNER WITH US.

ease up after tax season, so I packed up the XYL and went to North Carolina for a spot of camping and fishing. Who cares if you believe me, but it is true. STILL TRUE...AND I HEARTILY ADVOCATE KERR LAKE, NC...OFF RT 85 near VA BORDER.

Your sniffing is leading you down a false trail, but to proclaim differently
would weaken your already ludicrous and
hypocritical

"You like that word don't you?" SURE DO...USING ONE WORD TO CHARACTERIZE
SOMETHING IS A JOURNALISTIC TENET CALLED BREVITY.

You likely know what I am telling you is true, but won't
admit it. I do not have to be here...the beat goes on... STILL TRUE

"The lies go on." YES THEY DO...YOU LIE SEVERAL TIMES IN THIS POST.

5. I don't care in the slightest if you want to keep up blaming me. It will
keep the trail cold for the actual participants. there are more than you
think. If you want me to come in here with guns blazing, I will be amused
to do so. Our tomato plants have to be transplanted in 10 days, and I am
also finishing up a 50 mhz KW amp. Time is at a premium so my posts will
be brief but virulent.

Whaaaaaaa? WHAT PART OF THAT IS HARD TO GET? READ IT LITERALLY!
PERHAPS YOU DO NOT COMPREHEND...I DO NOT SPEND MUCH TIME AT THE KB. I DO
OTHER STUFF...GARDENING, ELECTRONICS, ETC..I HOPE THIS CLARIFIES.

6. In spite of what you think, you have never seen me, or my photo. That
whole gag was set up long ago on purpose.

"Yea, that's why you pulled it down so quick. YOU FORGET, THAT WAS IN THE
MIDDLE OF THE ISP WHINING ON YOUR PART...WHEN AOL SMACKED ME...CHRONOLOGY,
CHRONOLOGY, CHRONOLOGY, twistiekins...

I really don't care what you call me, or where you do it. In fact, start
at my front door if you want. My addy is on QRZ.com.

"Wrong again. You made the threats my way. I never threatened you. NAME THE
THREAT I MADE...

And you don't live at the address you listed." SEND ME A LETTER AND SEE,
AS I SAID BEFORE.

7. You threatened, as 1mangayboy, to print up insults about me and spread
the fliers around Dayton.
Whoopie. go ahead. In fact, I will be on 145.80 simplex when I am
there. Get a legal ham to call me and I will meet you wherever. You can name
the place. In fact, bring the 1st flier to me. As previously stated, I will
spit in your face.

"The charm that earned you your well deserved reputation..You won't do jack,
Dogie. COME TO DAYTON AND SEE... You have threatened me with everything from
that to the cops to the feds to lying about me to forging me...you are impotent,NOT
ACCORDING TO THE XYL, AND THAT IS THE ONLY PLACE IT MATTERS.

which is why you masquerade in drag." POT.KETTLE.BLACK, 1MANGAYBOY

What happens after that will be in direct proportion to your ability to react.
That goes for anyone who has a hardon
THAT IS STILL TRUE.

"Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most. THE ONLY THREAT I CANT HANDLE IS DEATH, AND THATS ONLY CUZ WE DONT KNOW EXACTLY WHEN...
THE NEXT DRIBBLE IS PSHYCHOBABBLING ASSININITY INTENDED TO IMPRESS HIS FELLOW KEYCLOWNS. ...resulting in a state of envy,NOPE for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity." GEE I DIDNT KNOW THAT WAS THE REAL REASON I TEASED AND INSULTED YOU GUYS...YA MEAN THE HOWLS OF LAUGHTER WERE JUST SOMETHING I IMAGINED...WOW...THANKS TWISTIEKINS. HELL, I JUST THOUGHT IT WAS A HOOT...SILLY ME.
ON THE OTHER HAND, RESORTING TO SUCH SILLINESS AS YOUR LAST FEW WORDS DOES PROVE THE DEPTH OF YOUR DESIRE TO INSULT ME...THATS COOL..KEEP IT UP...WE NEED THE BANDWITH FILLED.

for N8WWM. I have a sign made up, printed in 10 inch high international orange letters, with my call on it.

"AHAHAHAHHAHAHAH! Dogie hired a body guard for the hammie fest. I DID? YA MEAN MY KID??? NAHHH, HE'S JUST COMING ALONG TO VISIT HIS COUSINS IN A NEARBY BURB. <HE IS ONE HELL OF A SHOT WITH A .22, BUT MY SISTER IS ANTI-GUN, (the dummy) SO THE RIFLE STAYS AT HOME.
AHAHAHHAA! So thats' where you were going with the picture thing..ahahahahah! Can't say I blame you though. After all those things you said about techs being drug dealers and the allegations you made, man, I would to. Matter of fact, if it were ME that made those foolish remarks, I wouldn't even go."
FUNNY TWISTIEKINS...I HAVE BEEN AT DAYTON EVERY YEAR SINCE 82.

If you want to tap me on the shoulder and take a poke at me, that is also your option, and also the option you would most likely choose. THAT IS STILL TRUE
AS I SAID BEFORE...THAT IS HOW YOU CAN PROVE OR DISPROVE MY WORDS. I WILL BE THERE AS ADVERTISED...MY PARTY WILL COMPRISE MYSELF, XYL<ON FRIDAY>, Kid and XYL<ON SAT.>, AND VARIOUS LOCAL AND DX HAM FRIENDS ON ALL 3 DAYS. INTRODUCE YOURSELF IF YOU WANT, TAKE A POKE IF YOU WANT...MOX NIX.

"No. Not everyone is like you Dogie. See, you and your two gal pals are the ones that hide, hide behind phony names and anonymous email." SURRRRRRE, 1MANGAYBOY...SURRRRRRE!

Gotta go...My wife has reported that ehe has finished the grilled walleye. AND IT WAS DAMN TASTY!
"Sure she did. Did you hire her for a day, too?" NOPE...BUT I HAVE PAID THROUGH THE NOSE FOR HER OVER THE YEARS...

.this "fat and gay" guy has to eat! I spent 7 minutes on you.

"Kind of obsessing on the time, are we not? NOPE, JUST CHUCKLING AT THE RESPONSE I KNEW WOULD COME, WITH ONLY 7 MINUTES INVESTED!

With all that said, if you know what the law is, or should have known what the law is, you should be in compliance. Case in point. I just got home from a city board meeting in which a guy had been cited for erecting an oversized structure, too close to the property line, and failing the basic tests of structural integrity. I and others voted to have it removed or to somehow come into compliance which seems, given the circumstances, to be an impossibility. The property owner was an educated professional, but chose to roll the dice and hope he wouldn't get caught. He certainly did know or should have known what building codes applied, or knew or should have known how to get the information. Bad decision.

So did the city board fine him $17,000.00 for this violation? While I enjoy the "end" result of many of the FCC's enforcement actions...as a citizen of The United States of America, I abhor the "means" by which this particular agency reaches those "ends."

The principle of checks and balances are lost and your "day in court" in sadly omitted. Any "well educated professional" should be offended by the term "notice of apparent liability" in a democratic republic. The original poster makes some valid points.

>the other hand, are not "LAWS",

Wrong. The jurisdiction of the FCC falls under Title 47 of the Code of
Federal Regulations, as passed and amended by Congress. These 'rules'
are as much law as any other law under the code.

> No state or federal court will have any
>juridiction over an FCC "fine",

Wrong. The FCC is part of Federal jurisdiction.

> You are Guilty & can't go to any court or Jury
>to complain,

Wrong again. Every defendant has the right to defend his or her
actions in court, and has the rights of due-process and trial-by-jury.
If they wish to ignore those rights, they do so at the risk of a
judgment against them by default, also done through due-process.

> You can't be "ARRESTED" because you have a modified President CB.

Correct, because possession is not illegal. But you CAN be arrested
for using one. I wouldn't have said this a few days ago, but the
recent Supreme Court decision allows arrest, by any state or federal
law-enforcement agency, regardless of the degree of the violation.
(Yes, you can now be arrested for jay-walking)

> It's the same as, say, the US Postal Service chief writing a dress code
>"Regulation" that says, "No Mail Carrier shall wear Sneakers or Earrings while

>ACTS", they are just breaking a federal regulation, not THE LAW.

Wrong once again. The CFR is legislative law, and carries just as much
authority as case law. The Constitution, the CFR, any state and local
code, and even the Federal Postal Code are all examples of legislative
law. If, as per your analogy, the US Postal Service chief writes a
dress code, he may or may not be under legal authority to do so. If
someone want's to challenge that authority they have every right to do
so, provided they have standing. That's what case law is all about.

Have you ever checked the mic. Sometimes the PTT button does not disengage all the way. Slap your mike around a few times or check the mike socket and wires going to the PC Board. 9 times out of 10 its something as simple as that and is overlooked.

tra1n@aol.com (TRA1N) wrote:
eXPLAIN HOW A 2510 IS ILLEGAL?

Gladly, Train...

1. Transceivers are "type accepted"...I know they have a new phrase now, but I forget what it is...same meaning.

2. Type accepted transceivers are capable (out of the box) ONLY of being used in the spectrum that they are accepted for.

3. Modifying a transceiver type accepted for one radio service, to a state of capability in another, non type accepted service, is ILLEGAL.

4. The HR 2510 is type accepted ONLY as a 10 meter transceiver. Ergo, mods to this radio that make it capable on 11 meters or any other frequencies, are ILLEGAL.

Any questions? <TV commercial of the frying egg as "your brain on drugs" comes to mind here>

Call the guy at the above URL. He's fixed tons of these problems, and he
can tell you exactly what to look for. But I know the last one that he
worked on had a problem with the whole display, and what caused it was the
harness from the meter that plugs into the board.

In any case, if the problems turns out to be the display itself, give him a
call I'm pretty sure he has a few displays he'd be willing to sell.

Any mods can be made to this radio. You seem to make your own
assumptions which are wrong. The assumption you seem to be making
is the assumption that a modded radio is used to transmit. Legally
this can not be assumed. It is up to the authorities to show that your
modded radio is being used to illegally transmit. Bottom line is any
individual can legally mod his own radio, he only steps over the
line when he transmitts.

True story. However, the possession of such a modified radio can be
used as strong circumstantial evidence of illegal operation,
especially if it is capable of transmitting.

It could well cost him close to $17000. It appears that he will have to destroy a 600 square foot structure down to and including the foundation, and regrade the property to restore drainage to neighboring properties to original condition.

Receiving a NAL should indicate to you that you have screwed up big-time. If you get caught for speeding and get a ticket, that is pretty much another form af a NAL. Note the 'apparent' part. In both cases, if there are circumstances beyond the awareness of the citing agency, it might get you off. If you are truly in violation, well, bend over and prepare to receive your punishment.

That is an interesting concept. At one time the FCC considered the "possession" of a linear amplifier by a CBer, if they don't have a Ham license, as proof of use even if it was not even connected, or connected but not turned on, at the time it was discovered. I don't know if that is still the case, but at one time I believe it was.

> I wouldn't have said this a few days ago, but the
> recent Supreme Court decision allows arrest, by any state or federal
> law-enforcement agency, regardless of the degree of the violation.
> (Yes, you can now be arrested for jay-walking)

I think this has always been the case, where it was up to the officer to simply ticket you, or issue you a ticket and arrest you too. I think all the Supreme Court decision did was remove some of the second guessing that goes on after the fact when the need to arrest somebody comes up in court. The reason it would come up in a court case is the arresting officer has the right to give you a pat-down-search to insure the officer's personal safety, and there is plenty of case law to back that up too. If something illegal is discovered during that search it can legally be used against you in court. If a judge later determines the arrest was not really necessary then the door is opened to have anything discovered during the pat-down-search excluded. In some cases that is enough to let some people "walk". The other thing to remember is even while getting a ticket you are "technically" under temporary arrest since you are not free to leave until the officer gives you the ticket. Even under this condition officers have been know to do a pat-down-search and have it stand up in court later.

Type approval is not required for transmitters used on amateur bands.

>Any questions? <TV commercial of the frying egg as "your brain on drugs"
>comes to mind here>

One of the nice things about having an amateur license is that you may
build your own transmitters or modify an existing one without needing approval.

An amateur licence covers any transmitter capable of being operated on
amateur frequencies. Consider the number of amateurs using HF transmitters
capable of transmitting outside their bands or on higher power than permitted.

No. Your days of asking anything of me are over. I am tired of educating
you on what you failed to absorb during the years you were abused. You
are a masochist.

You are still humping the wrong leg.

What's the problem?

"Comprehension appears to be your main one and your lack of control
appears to gnaw at you as bad as 1mangang still haunts Dogie, so I would
venture to guess that would be the second. I have asked for your take on
the post Leann claims was forged since she wrote it. You keep avoiding
it. You shall answer that question before anything else. So I pose your
own question to yourself. What is the problem? Can you not comprehend
the question you pose to others? The world is howling at you, but then
again, you knew that, ever since I reduced you to begging for your own
newsgroup."

>Date: 4/26/01 11:57 PM Eastern:
>.." No state or federal court will have any
>>juridiction over an FCC "fine",

1) Wrong. The FCC is part of Federal jurisdiction....."
* NO YOU ARE "Wrong". Mt rushmore is also "part of the fed jurisdiction".... When you get an FCC fine, There is NO "Court Date" or ANY option or way whatsoever to Appeal/appear in A federal court on the matter. You can Only appeal the fine(if you choose) Back to the FCC (The people that "fined" you in the first place!) You can only go to federal court against the FCC if you take Your OWN action Against them, If you Sue them, for example...This IS the way FCC regs work.

2)..."You are Guilty & can't go to any court or Jury to complain, ..." Wrong again. Every defendant has the right to defend his or her actions in court, and has the rights of due-process and trial-by-jury. If they wish to ignore those rights, they do so at the risk of a judgment against them by default, also done through due-process....."
* AGAIN You ARE WRONG. When you get a Notice of Liability from the FCC, YOU ARE not a "defendant" in any court, Have not Been "Arrested", & Have not broken a State, Federal or Local "LAW" that would give you the right to a court date, just an FCC "reg", & You are not on any court's docket, not given any option to file with any court & THey CAN't Put you on any court date docket if you walk into a fed court with your "Notice of Liability" from the FCC. YOU apparently "Want" to believe you have the same rights as a criminal, & I truly wish you were right, but you aren't.
3)You can't be "ARRESTED" because you have a modified President CB.

....."Correct, because possession is not illegal. But you CAN be arrested >for using one. I wouldn't have said this a few days ago, but the recent Supreme Court decision allows arrest, by any state or federal law-enforcement agency, regardless of the degree of the violation.
* ......AGAIN YOU are wrong. The Supreme court decision only applies to the "criminal" laws (including Jay walking) that people were ALREADY being arrested for in certian juridictions, someone went to the Supreme court to stop it, & lost. This has NO Effect on FCC regulations, & "cops" & courts" have nothing to do with them. BTW - Recently a bill was passed to allow "local" enforcement of CB enfractions....Before you mention this, I'll correct you anyway: First, the local jurisdiction MUST pass a specific Local ordinance BEFORE they can enforce anything regarding CB. At that point you would be able to go to court, because the local ordinance would be a "law" , not an FCC regulation. No jurisdiction has yet shown that they want to do this, & no Local cop anywhere can yet "become" a CB enforcer until he has his/her local ordinance in place. FINALLY to quote "your" ignorant post...">Before you come in here again

spouting BS and calling people "idiots",
>go study a little harder."

A troll wouldn't be complete without all three of you gals at my behind, and it still does nothing for either one of you. Dogie, what you have to say is pure trash, you shot your credibility on your own, sort of like Leland. All of you trolling troublemakers share one thing, you all posted through different ports and newsservers when there was no reason too.

The most hilarious thing is, Dogie, you are a foul mouthed gay sex sicko, which no one can deny.

Leland, is one of those college grads whose momma bought his degree. Two alleged bachelors and the poor sap still can't spell and put together a coherent sentence without analytical help from his pc. Evidenced by the MANY failed posts through cotse that didn't come all the way through, or deleted too much of a post, right down to the error of leaving his stupid ditty about Morse at the bottom.
Dogie, stop embarrassing yourself. The failed posts were everywhere leading up to that one that busted him.

Proof is in his page on QRZ, that he said "may lead to job offers." Yea, maybe now that I have corrected the errors for him. Sparky, I have disgraced many times. In case we forget, the first time was when you stuck your beak into a conversation that didn't include you and then to turn around and say, "You started it." That was perfect, actually. Showed that if you lie about something so trivial, well, we know the rest, thanks to you, Sparkles, proven liar.

Here's the kicker: The above is all true.

The best you dress wearing gals can throw at me is that I don't know which one of you poor queens are posting in disguise? BWAHAHAHAHA! Yep! Y'all sure went through alot, including trashing both your reputations, just to confuse 'ol twistie about who posts what. I am so confused!! BUT, Dogie, you are still a foul mouthed gay sex obsessed whacko, Leland, a lying forging snake, and Sparky, a bottom feeding troll. All that to confuse me. You klowns sure showed me. Again.

A few years ago, a friend and I experimented with packet radio on C.B. It worked well. We did that for about a week and put our TNCs back on 2 meters.

Have fun!
Chris

5594. Re: Twistie (that endearing term, he luvs me) Rules over Dogie

Newsgroup: rec.radio.cb
Date: 2001-04-27 17:39:55 UTC
From: twistedhed@webtv.net
Message-ID: <26427-3AE9AEEB-32@storefull-123.iap.bryant.webtv.net>
Source record: 80073

I AM USING CAPS NOT TO SHOUT, BUT TO DELINEATE THIS POST FROM PREVIOUS ONES...I ask your indulgence.

"Sure. I love slapping you around. Plus, you lie and get caught all the time."

What ticked you off bad enough to
NOTHING AT ALL, I WASNT TICKED...just amused...

"So all it took was a little amusement so stop you from posting porn?"

"Facts are backed by evidence. YOU, need a GOOD LAUGH OCCASIONALLY, AND SO POST HERE TO GET A RISE OUTTA YOU, WHICH HAPPENED.

"There you go plagiarizing me again. Remember Dogie, I am the one that told you long, long time ago that I click here every few hours during my busy day to laugh at you. But I know how much weight my word carries with you and leann (gospel, almost), well, go ahead and borrow from me."

Yawn...your responses get lamer and lamer...and your conclusions more"out there", every day. THAT ONE STILL STANDS.
FACTS
1. You posted as 1mangang, which got this little roller coaster moving
NOPE, THAT ONE STILL STANDS...YOU WERE SNITCHED OUT. QUIT LYING.

"You can cry this one all you want. Just cause you say it does not make it so. You have no credibility, Dogie. You think that Lean backing you in drag will somehow boost your lies? You know how many times you have accused people of BS here? The little chickiehawk that cried wolf. YOU are the confused, the ignorant, the foulmouthed, the porn obsessed."

You were getting your ass slapped so bad SLAPPED? HELL< I HAD ALL YOU GUYS SCREECHING WITH THOSE POSTS...SLAP AWAY...I AM BANDWIDTH WASTE MOTI

"No. You are gay porn motivated. Your 3000 plus posts attribute that."

You came in here and immediately attacked everyone, AND GOT JUST WHAT I WANTED. YOUR LENGTHY RESPONSE NOW SHOWS THAT IS CONTINUING TO BE

"Just what I wanted it to be. Draw your fire away from the ng so business is back to usual. You aven't done anything you said you would."

you were going to take over,ACTUALLY
THOUGHT WE COULD PISS OF A BUCH OF
CLOWNS: WE DID.
thought that the "lowly cbers" would lay down and kiss your ass because
NOPE JUST THOUGHT IT WOULD BE FUNNY TO MAKE YOU CLOWNS JUMP...IT IS IT IS IT IS.

"Showing the world your sexual perversions is fun? HAhah! If you say so..."

you retreated into being some gay sex perved lunatic".NOPE,

"No? Oh, that WASN'T you posting all the porn related gay stuff?"

I RESPONDED IN KIND

"Oh, so it WAS ou. Make up your mind. You must be trying to justify it."

AFTER THAT GOOFY WEB PAGE ONE OF YA MADE. I JUST DID IT MORE THAN YOU CLOWNS

"Your lies nail you. I don't even need to point them out they come so frequent. Do the search. You started the porn trash before anyone started with you. Then you attack anyone that makes an ass out of you, which has become increasily easier to doeverytime you open your beak..Period."

RESPONSE BEING THE KEY HERE...CHECK THE CHRONOLOGY. BTW, THAT PAGE IS A HOOT.

"Right. Check it. You attacked everyone who dared speak. I guess the whole group did it. Or as Sparkles is so fod of saying..the whole world did it to you."

you felt the need to be anonymous
Which is why I posted directions to my front gate. Twice." THAT MY BE SO,

"No, not MAY be, it IS so. There is a huge difference."

BUT YOU NEVER ADMITTED TO BEING 1MANGAYBOY...THIS PARTICULAR RESPONSE OF YOURS TOTALLY DODGES THAT FACT.

"Nope, I didn't. And I won't, just like I won't accept blame like you said I should for being "hypocritical" for not jumping in and defending your ass when you got it threatened. You, are nuts."

because you wanted to be able to post your judgemental trash in a pseudo-pious fashion on the NG in your twistedhed ID. THAT ONE STILL STANDS.

"Self-projection never fit someone so well."

"And just HOW long has it been since you posted under your own name? FREQUENTLY, JUST NOT HERE.
TWISTIE, MIRROR, 1MANGAYBOY."
2. Any threats you say I made were made AFTER

"Oh, is THAT your justification?

YES IT IS

"Speaks volumes abut your nature, character, and intellect. Heathen."

AND IT IS INDEED JUSTIFICATION.

"Yes, it is, for someone who has done time. Just like I said."

"Someone threatens you so you threaten
someone you THINK it was? I have your threats, pal. Every lovin' single one you ever made. GLAD TO HEAR YOUR HARD DRIVE IS FULL OF THIS STUFF ON HERE.

"I am on webtv, remember? Maybe your computer grad there can tell you I don't have a hard drive."

YOU ARE CORRECT, I HAVE NO WORRIES IN THE MATTER. IF I WAS YOU I WOULD CONTACT THE LAW IF YOU HAVE FEARS THAT THERE ARE CREDIBLE THREATS MADE AGAINST YOU.

"Sure you would. That's because you are yellow and enjoy calling authority. It gives you a sense of power. None of you queens can possibly give me anything to worry about.

my home, family and animals were threatened with shooting, raping, etc. I certainly don't hear you crusading about the wrongness of that situation.
"Yes, I did. Go find it. KINDLY REPOST ANYTHING YOU SAID THAT CONDEMNS PHYSICAL THREATS.

"No. You get it. I know what I said. Just because you are too stupid to remember it does not mean I have to prove jack to you."

If that in and of itself isn't hypocrisy then what is?
"It's hypocrisy because I didn't jump in and defend YOU? NOPE, NOT AT ALL. I MEAN, AND YOU KNOW THAT THIS IS WHAT I MEANT...THAT SOMEONE WHO MAKES PHYSICAL THREATS OVER THIS SHIT IS GOOFY IN THE HEAD.

"No, I don't know what you mean. No one understands you except Leland, Sparky, and Kari."

The statement that I would hurt no one was made before that date, which your own reposting of the messages shows. I would like to see your reaction to those threats levied at you.
"You saw my reaction to you and Leland's threats. I don't take either one of you serious. Why would anyone take anything an anonymous person said seriously? That speaks more about the person believing it." NOPE, THAT IS A FALLACIOUS TRAIN OF LOGIC. IN ORDER FOR A THREAT TO BE SUCCESSFULLY CARRIED OUT, WITHOUT ANY COMEBACKS ON THE PERPETRATOR, ANONYMITY IS A FREQUENTLY USED

"And you just know all about that, eh?"

3. Gay posts? That's a hoot. Look at the forged stuff from Timmy and you: "fatandgayN8WWM", "N8WWMisgay", and several others.
Exactly. Atleast you had the good sense this time to say, "several others." Dogie, you pissed off the entire cyber cb world, and then some. THAT MEANS THAT THE TASK UNDERTAKEN WAS ACCOMPLISHED. IF SOMEONE IS DUMB ENOUGH, LIKE SWANGTHANGWIMP, TO POST PHYSICAL THREATS, THEY ARE THE ONE

IN THE WRONG.

"Oh, here you play judge AND jury. You say his actions were worse than yours. I say they weren't."

Surely you can't be that ignorant as to think only Tim and I would be upset with you enough to (gasp) flame you." FLAME AWAY, IT IS OF GREAT AMUSEMENT!
When I WAS posting stuff here I wasnt whining about you clowns doing it back at me. I can take it because I know it's all BS. In fact, it was frequently funny to contrast my internal reactions to your 1mangayboy posts with your reaction to getting it thrown at you. It still is.
"If it's all fun, why can't you do it without being threatening or vulgar?" FIRST, IT IS NO LONGER ME POSTING AND HAS NOT BEEN FOR A LONG TIME.

"You lie."

SECOND, I ASK YOU, WHAT THREATS? NEVER HAVE I POSTED ANY SORT OF PHYSICAL THREAT EXCEPT TO SPIT IN THE FACE OF ANYONE HARASSING ME IN PERSON.

"You lie more. You threatened me with the feds, the police, the FCC. You lie junior, you lie."

4. In spite of your words about how I was going to be "fucked", and that I was "g-o-i-n-g" I am still here.
"You will not find that word anywhere in any of my posts. And THAT, is a fact." YES IT IS A FACT, YOU DID IT AS 1MANGAYBOY. QUIT LYING.

"No matter. Your mind is made up about me and mine is made up about you."

"Taking Leland lessons? You guys forged me, then reported the forged posts to webtv (which shows that the computer grads intelligence and fat fingers were at work here) in hopes of getting me to leave. You tried blackmailling the group, threatening the group, etc. All in your poor,misguided effort to get me to leave," FIRST, I DO NOT THINK LELAND IS INVOLVED,

"You lie."

AND THE SQUEALING TO WEBTV, WHILE NOT BEING AN ACT OF MINE, IS KINDA FUNNY NOW THAT YA MENTION IT.

"Indeed it is. Especially when you consider the intellect of someone that figured they could get away with it. Maybe a computer grad move, eh?""

EVEN FUNNIER WHEN YOU CONSIDER THAT YOU AND OTHERS HERE WERE CRYING TO ISP'S

"Wrong. Not my style. Yours. YOU are the one that begged for info on me. You are the one that tried in vain to get me to go away. You lie Dogie.

This was all you, Leann, and Sparkles."

ONE HELL OF A LOT LONG BEFORE THAT HAPPENED. HMMMMM...DOES THE WORD RESPONSE

No. You tried that before. It is your way of justifying your shallow, calloused wrongdoings."

MAYBE FIT HERE AS WELL?

The biggest liar is you, because you even lie to yourself ABSOLUTELY TRUE AND BORNE OUT BY YOUR RESPONSES HERE.

"As I stated the best you can do is say that you sissies can anonymously post and I don't know who it is. Big whoop. Anything else is a lie."

"I consider the source and smile."

THATS COOL, SO DO I.

You think no one knows what you have done in your 1mangayboy pseudonym. Many do. STILL TRUE

"Definite leland lessons. Stop thinking or caring so much what others may or may not think and clean your own back yard. It's full of sewage."

NOPE, I DONT CARE...EXCEPT TO THE EXTENT OF THE HUMOR I FIND IN YOUR SERIOUS DEBATE HERE...LOL

"Your arrogant candor dictates your lack of sense. Do you truly believe that if I were to engage in anything serious I would involve you three queens?"

However, it only matters in the context of your bitching and whining about all the porn posts, etc. I really don't care, because all the bitching consumes bandwidth, which was the original idea. If you can do it, anyone else can...any other ideation is hypocrisy. STILL TRUE AND STILL HAPPENING!

"It is obvious you learned some new words in the above statement and needed to try them out." LOL...GOOD POKE...FOR A FIFTH GRADER!
4. Apparently you don't realize it, but I have not even been on here for weeks. my job pressures..

"Dogie. You don't get it. I got stuff about you I didn't even want, it just came. You are unemployed. NOPE

"(yawn)" It would be easier to say every time you open your mouth you lie or trashtalk. Wait a minute. That's true. Go research your own posts and find one, just one, to anyone on here other than your porn sharing posse of Leann and Sparkles that you had anything decent to say."

You don't work. NOPE You receive a government check each month.NOPE, NAME THE AGENCY..
You don't live at the address you have listed. NOPE SEND ME A LETTER

IF YOU WANT, I WILL SCAN AND SEND THE COPY TO YA. You are not married. Not legally anyway. NOPE, IN 12th YEAR OF MARRIAGE, IN FACT. You are a pain in the ass on the hammie I AM ON 6 AND 2 SSB AND THATS IT...AND KNOWN THERE AS THE GUY TO COME TO FOR DESIGNS, ADVICE, ETC...THAT WORKS.

"Bwaahahahahahah! You are seriously delusional, Dogie. What, you think no one here can copy you? Well, they can't unless we use the internet."

You have a reputation as a know-it-all and only two locals will even talk with you on your repeater, FUNNY, CUZ I DO NOT USE REPEATERS UNLESS TRAVELING. HAVE NOT FOR AT LEAST 4-5 years. even they don't consider you a friend. LOL...MY AMATEUR FRIENDS EMAIL ME STUFF TO PASS ON TO THE CURRENT POSTSERS ALL ALONG. Your neighbors think something is wrong with you. MY NEIGHBORS AND THEIR 2 KIDS HAD EASTER DINNER WITH US.
ease up after tax season, so I packed up the XYL and went to North Carolina for a spot of camping and fishing. Who cares if you believe me, but it is true. STILL TRUE...AND I HEARTILY ADVOCATE KERR LAKE, NC...OFF RT 85 near VA BORDER.

"Put the map away."

Your sniffing is leading you down a false trail, but to proclaim differently would weaken your already ludicrous and hypocritical

If I am wrong, it wouldn't bother you, but seeing how loud you and Sparkles cry and defend eachother, it shows you are both guilty garbage."

"You like that word don't you?" SURE DO...USING ONE WORD TO CHARACTERIZE SOMETHING IS A JOURNALISTIC TENET CALLED BREVITY.

"Stop it."

You likely know what I am telling you is true, but won't admit it. I do not have to be here...the beat goes on... STILL TRUE
"The lies go on." YES THEY DO...YOU LIE SEVERAL TIMES IN THIS POST.
5. I don't care in the slightest if you want to keep up blaming me.

"Sure youdo, which is why you are still my slave after all these months. You can't help yourself."

It will keep the trail cold for the actual participants. there are more than you think. If you want me to come in here with guns blazing, I will be amused to do so. Our tomato plants have to be transplanted in 10 days, and I am also finishing up a 50 mhz KW amp. Time is at a premium so my posts will be brief but virulent.
Whaaaaaaa? WHAT PART OF THAT IS HARD TO GET?

"The relevancy part."

READ IT LITERALLY! PERHAPS YOU DO NOT COMPREHEND...I DO NOT SPEND MUCH TIME AT THE KB. I DO OTHER STUFF...GARDENING, ELECTRONICS, ETC..I HOPE THIS CLARIFIES.

"Feel better?"

6. In spite of what you think, you have never seen me, or my photo. That whole gag was set up long ago on purpose.

"Yea, that's why you pulled it down so quick. YOU FORGET, THAT WAS IN THE MIDDLE OF THE ISP WHINING ON YOUR PART..

"Wrong again.for someone accusing someone else of being wrong, you sure are making alot of folks crack up"

WHEN AOL SMACKED ME...CHRONOLOGY, CHRONOLOGY, CHRONOLOGY, twistiekins...
"See, I know ya' luv me."

I really don't care what you call me, or where you do it. In fact, start at my front door if you want. My addy is on QRZ.com.
"Wrong again. You made the threats my way. I never threatened you. NAME THE THREAT I MADE..

"See above. I already showed you, beakboy."

And you don't live at the address you listed." SEND ME A LETTER AND SEE, AS I SAID BEFORE

"Now that wouldn't be very smart now, would it? I know, you send me one and I will send it back."

7. You threatened, as 1mangayboy, to print up insults about me and spread the fliers around Dayton.
Whoopie. go ahead. In fact, I will be on 145.80 simplex when I am there. Get a legal ham to call me and I will meet you wherever. You can name the place. In fact, bring the 1st flier to me. As previously stated, I will spit in your face.

"The charm that earned you your well deserved reputation..You won't do jack, Dogie. COME TO DAYTON AND SEE... You have threatened me with everything from that to the cops to the feds to lying about me to forging me...you are impotent

,NOT ACCORDING TO THE XYL, AND THAT IS THE ONLY PLACE IT MATTERS.

which is why you masquerade in drag."

POT.KETTLE.BLACK, 1MANGAYBOY
What happens after that will be in direct proportion to your ability to react. That goes for anyone who has a hardon
THAT IS STILL TRUE.

"So is the paragraph below."

"Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most.

THE ONLY THREAT I CANT HANDLE IS DEATH, AND THATS ONLY CUZ WE DONT KNOW EXACTLY WHEN...
THE NEXT DRIBBLE IS PSHYCHOBABBLING ASSININITY INTENDED TO IMPRESS HIS FELLOW KEYCLOWNS. ..

"You keep retreating to the notion that I care what others think. I don't, Dogie. Not you, not Leland, not anyone on the entire group. Why is that so hard for your chickiehead to understand? Besides, Sparkles and you care enough for all of us. :)"

resulting in a state of envy,NOPE

"YEP"

for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity.

" GEE I DIDNT KNOW THAT WAS THE REAL REASON I TEASED AND INSULTED YOU GUYS..

"Of course you didn't. Sick folks, especially in the mind, are always in denial. It is a completely natural defense mechanism. Remember? The best defense is a great offense, not a sloppy, obscenity filled one full of gay suggestions and wants writte under the influence of rage."

YA MEAN THE HOWLS OF LAUGHTER WERE JUST SOMETHING I IMAGINED...WOW...THANKS TWISTIEKINS.

"You are quite welcome, chickiehawk."

HELL, I JUST THOUGHT IT WAS A HOOT.

"You have "thought" wrong, ignorant, and vulgar since you arrived."

.SILLY ME.

"No. Not silly. Gay sex perv, you."

ON THE OTHER HAND, RESORTING TO SUCH SILLINESS AS YOUR LAST FEW WORDS DOES PROVE THE DEPTH OF YOUR DESIRE TO INSULT ME.

"I call you nothing that isn't true. You have demonstrated what you were long before I called you a gay sex perv.""

.THATS COOL..KEEP IT UP...WE NEED THE BANDWITH FILLED.

"The "we" thing again. Social deviance still like a monkey on your back, huh?"

for N8WWM. I have a sign made up, printed in 10 inch high international orange letters, with my call on it.
"AHAHAHAHHAHAHAH! Dogie hired a body guard for the hammie fest. I DID? YA MEAN MY KID???

"HAHAH! NO, Dogie. I mean the bodyguard you have with you in Dayon,,ahahahaha, you a..hahahahahahahaha."

NAHHH, HE'S JUST COMING ALONG TO VISIT HIS COUSINS IN A NEARBY BURB.
<HE IS ONE HELL OF A SHOT WITH A .22,

"Is he as ugly as you?"

BUT MY SISTER IS ANTI-GUN, (the dummy) SO THE RIFLE STAYS AT HOME.

AHAHAHHAA! So thats' where you were going with the picture thing..ahahahahah! Can't say I blame you though. After all those things you said about techs being drug dealers and the allegations you made, man, I would to. Matter of fact, if it were ME that made those foolish remarks, I wouldn't even go."

FUNNY TWISTIEKINS...I HAVE BEEN AT DAYTON EVERY YEAR SINCE 82.

"Yea, but you never accused some major players in the game of being coke dealers and aryans before either."

If you want to tap me on the shoulder and take a poke at me, that is also your option, and also the option you would most likely choose. THAT IS STILL TRUE

"Only because you seem to feel others are like you. I assure you, they aren't. You have you, Leann, Kari, and Sparkles. No one else is like you."

AS I SAID BEFORE...THAT IS HOW YOU CAN PROVE OR DISPROVE MY WORDS. I WILL BE THERE AS ADVERTISED...MY PARTY WILL COMPRISE MYSELF, XYL<ON FRIDAY>

"Oh, and this is supposed to impress exactly WHO? Is it supposed to make you seem like a tough guy? Ok. (Ahem!) Let me see if that works. Attention. For all who care, I will be at the big bonanza in July in Orlando. Dogie, bring your tape of me, I will autograph it and gladly give you the opportunity to ruin yourself for good in person. Even get ya' on film so we can post it right here. Hmm...I don't feel any different. What was that supposed to do?"

, Kid and XYL<ON SAT.>, AND VARIOUS LOCAL AND DX HAM FRIENDS ON ALL 3 DAYS. INTRODUCE YOURSELF IF YOU WANT, TAKE A POKE IF YOU WANT...MOX NIX.
"No. Not everyone is like you Dogie. See, you and your two gal pals are the ones that hide, hide behind phony names and anonymous email."
SURRRRRRE, 1MANGAYBOY...SURRRRRRE!
Gotta go...My wife has reported that ehe has finished the grilled walleye. AND IT WAS DAMN TASTY!
"Sure she did. Did you hire her for a day, too?" NOPE...BUT I HAVE PAID THROUGH THE NOSE FOR HER OVER THE YEARS...
this "fat and gay" guy has to eat! I spent 7 minutes on you.
"Kind of obsessing on the time, are we not? NOPE, JUST CHUCKLING AT THE RESPONSE I KNEW WOULD COME, WITH ONLY 7 MINUTES INVESTED!
Almost as if you were trying to prove I didn't consume your every waking thought NOPE, ONLY THE TIME I SPEND MESSIN WITH YOU, AND THAT IS WORTH THE LAUGHS.

"Again, it is much more entertaining when you think for yourself instead of shamelessly stealing all my lines. But that's ok. I understand. Sparkles does it too. Only difference is, you know you do it. Sparkles can't help her self. She's in luv, too."

and show I don't have complete and dominating control over you TAKE THAT ONE UP WITH THE XYL...YOU WILL HAVE A BATTLE ROYAL. like I do sparkles. WHO IS SPARKLES?

"Your galpal tranny-in-a-dress."
Whatever. Let's see, total time

elapsed...hmmmm,..YOU beat me, Dogie! I have spent almost 12 minutes embarrassing<READ THAT AMUSING> you this time, compared to your paltry 7 at DRAWING YOU OUT TO CONSUME BANDWITH!

"What bandwidth, you halfwit? This is the internet. Oh, but since you talk like that here and obviously think there exists "bandwidth," it would also be safe to say you act on the radio like you do here. Proved me right again."

only you have nothing left to save."
NEVER WAS A WORRY...DOES ISRAEL APOLOGIZE TO GERMANY FOR HANGING YOUR HERO EICHMANN?

"You can only bring up I don't know who posts what so many times between the three of you. So what? It's still coming from your dogie pound. Whenever you have lost an argument on merit, you retreat into your barrel of accusations. Everything you accuse me of comes right back to your feet. Self project thing, remember? "course you don't."

toodles my boy, toodles...
KEEP POSTING TWISTIEKINS...

"You luv me."

"Go grab a Harper's Bazaar! :) You say you aren't gay. What kind of man speaks to another with such endearing terms and fondness? ONE WHO WANTS YOU TO TALK MORE SHIT, DUMMY!

"And you say the same for all your gay porn posts? Sorry. You are projecting. Loser."

Is that native to Toledo or something? IS BEING A WHINEBABY NATIVE TO FLORIDA?
"Did that seem like a trick question?"

Oh well, if it keeps you from repeated porn posting, I give you permission to use it."" GOOD, CUZ I WILL DO SO AGAIN, GLAD YER HAPPY ABOUT IT!!

"I' am always happy when I get to rip you out of the closet by your beak and embarrass and make an ass out of you in front of the world."

.toodles, my boy, toodles...
POST MORE TWISTIEKINS

"Keep switching diapers with your 2 queens. Worry about yourself, not so much what others do. You ought to work on that."

> capable of transmitting outside their bands

Sure, that happens, and some of it is for legitimate reasons. For example, I work with a search and rescue arm of the USAF. This group (CAP) operates an extensive HF and VHF radio network on a nationwide basis. It's operating authority doesn't come from FCC, but NTIA, and there are lists of available equipment that meets these stringent requirements for operating on said frequencies, as well as licensing regulation, that come directly from USAF. One readily available radio that meets the HF requirements is the IC706. So, yes, my radio IS modified (at the dealer, and I had to show authorization to operate on those bands. Additionally, I operate on other US military frequencies such as Coast Guard Auxiliary (and they on ours), and government frequencies such as FEMA. And I am not illegal.

or on higher power than permitted.

Power, Power, Power, that's all some folks can think about. Here's the generally accepted "rule" in all military and commercial operations, as well as the Amateur Service where it is amended to read UP TO 1500 watts: One should use only the amount of power necessary to establish and maintain communications. If it can be done on 5 watts, USE it! If it takes 50 watts, USE it, and so on. But it is also imperative that interference be prevented to the extent possible while considering the priority of the message (urgency). In CAP, for example, there IS no top limit, however the above "general" rule applies. IF everybody else is using 100 watts, and you come on with 1000 watts, then the question will be asked WHY. I "can", therefore, go to about 600 watts if *needed*, but I haven't even turned it on in several months.

I just wanted to point out that all modded radios are not done to be illegal, nor do people *always* use illegal power.

Let's get this straight, twisted. I troll you for the following simple reasons: 1) you are an idiot 2) you are an arrogant idiot 3) you don't realize that you are an arrogant idiot 4) everything you say is a load of shit, 5) everything you say makes you look like a putz, and 6) you gleefully show your contempt for anyone that doesn't suck your dick.

Sexual inadequacies and homosexual tendencies he fails to suppress manifest as sexual oriented insults directed toward others with whom he feels threatens him the most (IE: his definition of what a real man is, resulting in a state of envy, for it is an unrealistic goal of attainment for him to regard himself as a real man, due to, more likely than not, confusion among his own sexual identity...

Let's get this straight,

"Oh, like now you are gonna be straight? It ain't me you have to convince."

So let there be no doubt in your mind, twisted, I troll you because it's fun.

"Of course it is. I am the only one who validates you other than your porn posting buds and you know they can't validate you.When it ceases to amuse either of us, I am certain we would no longer reply. Uh, what was your point?"

In fact, trolling you is so much fun I'm disappointed that I didn't start earlier.

"Glad I could bring a smile to an otherwise unfulfilled, unproductive, and extremely envious misguided soul."

In almost all cases where the FCC actually collects a fine, the courts ARE involved.

> Any "well educated professional" should be offended by the term
> "notice of apparent liability" in a democratic republic. The original
poster
> makes some valid points.

A notice of apparent liability is just that... a notice. You may pay up now or go to court later. In fact, if you think about it, it's not very different from getting a traffic ticket from the local police... you don't have to pay the ticket now, you CAN choose to miss work, hire a lawyer, and fight it in court (just as you can an NAL). BUT... you'd better be in the right, or it's gonna cost you a whole lot more than just the ticket. The large NALs you read about are not 1st time offenders, they're repeat offenders/scofflaws who figured the FCC would never carry through.

THe Difference in an FCC Notice of Liability is that you DON'T go to
court later...On a traffic ticket it Explains how & where to take it to "court"
if you don't want to pay....On an FCC reg violation, unlike a traffic ticket,
There is no "court" listed if you don't want to pay.It instead explains how to
Write back to the FCC to appeal for a lower fine or no fine at all.... & if you
want a day in court, "You" must sue the FCC as a seperate action from the
"automatic Guilty" FCC notice. It is actually a RARE occurance when an
"Individual" with an FCC notice ever ends up in court, due to the fact that,
unlike a traffic violation, there is No Court that you "automatically" end up
in on a specific date if you choose not to pay.......Vey few people realize
this, & ASSume an FCC violation "works" like a traffic Ticket.....
I think the IRS may possibly work the same way as the FCC......if they
"say" you violated some IRS rule & owe a "Penalty" of $1200, you don't "get a
court date" on the bottom of the "penalty Ticket" if you feel you aren't
guilty. You are just "guilty" & Owe it, period. You have to appeal right back
to the IRS, & they can "take" their penalty right out of your wages, before &
without you ever seeing a "court" on the matter, Unless you, as a seperate
case, initiate a suit on them.

Get it right. The FCC sends a notice of apparent liability. You have
time to respond which may reduce or cancel the fine. If the fine is
not canceled, a forfeiture procedure is initiated. A hearing is held
before a Federal Court judge, and if you don't show up to contest it,
you lose by default. But you CAN contest it, in court, and by a jury
if you so choose.

None of this changes the fact that all of the main points I made are still true. I'm sure an FCC Regulation can also be referred to as a "law" in terms of linguistics, & that is not what I am pointing out, but rather that an individual does NOT have the due process rights that a Traffic violator or other "law breaking" act does, in terms of having your day in court. I repeat, there is NO mechenisim or way to "get" to court when you receive an FCC violation If they say you are Guilty, You are & that's it. The only way into court is for you to sue them as a SEPERATE matter before the court. Breaking a "regular" law Requires the fining/arresting authority to take you in front of a court-----On, say, a traffic ticket, you can check the "guilty box" & pay the fine, or check the "not guilty" box & go to the listed court. More serious crimes require you do go to court.......An FCC violation (go check this specifically) Has NO possible Way or option for you to choose to see a court on the matter to hear your case, period. THIS is TRUE, CONCRETE & not Abstract, That's the way it is & I'd like to see ANYONE point to a webpage that Specifically Shows this to be otherwise.

Group: rec.radio.cb Date: Fri, Apr 27, 2001, 7:53pm (EDT+4) From: coolaidcb13@hotmail.com (Cedric)
What the hell is key clown and anti key clown?????????

Antikeyclowns: A group of amateurs (who also happen to be hams) obsessed with gay porn, trolls, lies, and anonymous postings. Mainly, Dogie Adair, nocode n8wwm, and Leland C. Scott, a "computer science major" who can't tell where posts come from and despite two alleged college degrees can't get beyond the tech (cough) license and uses the call of KC8LDO.
Oh yrea. And Sparkles. She tries so very hard to be my pet, but what she really does best is beg. She is actually Leland, who we fondly refer to as Leanne. Do a search on these lovebirds and see what I mean. Also, watch all headers in here. They forge and talk to themselves.

Keyclowns: The rest of the world.

By the way Cedric, is your webpage still up? How is the pirate activity coming along? If you are still transmitting and are interested, send me an email, all kinds of neat stuff happening on the weekends, especially on Saturdays.

5613. Re: Sparkles is the header master?

Newsgroup: rec.radio.cb
Date: 2001-04-27 22:14:36 UTC
From: twistedhed@webtv.net
Message-ID: <10540-3AE9EF4C-48@storefull-128.iap.bryant.webtv.net>
Source record: 80092

and your lack of control appears to gnaw at you as bad as 1mangang still haunts Dogie, so I would venture to guess that would be the second. I have asked for your take on the post Leann claims was forged since she wrote it. You keep avoiding it.
And you seem to be hung up on it. I didn't write it and it has nothing to do with me, but of course you will only believe what you want regardless of the facts. So you see, twisted, it doesn't really matter what I say, you won't believe it anyway.
You shall answer that question before anything else.
I just did.
So I pose your
own question to yourself. What is the problem? Can you not comprehend the question you pose to others? The world is howling at you, but then again, you knew that, ever since I reduced you to begging for your own newsgroup."

And you are still ignoring my post.
Sparky, FLCD

"YOu ignored first. Do me the courtesy of answering the original question I asked you when you arrogantly stuck your beak in where it didn't belong, lied about it, then ignored it. It does have everything to do with you, because I say so. I run your show, not you junior. You are ignoring and running. You cried, You begged. You lied. You whined. You threatened the group. You tried blackmailing the group. You sniveled for your own ng. You pleaded for members., got none, and then stated, "this is fun!" That makes you a masochist.

All you can say, over and over, is I may have an ID post or two wrong, but I don't, and it makes you whine even harder and break your neck out here to try and discredit anything I say, only you can't, so the best you can do is stutter, "NANANA you don't know who we aaaaarrrreeee."
Haha!

You are right, watching your actions of pathetic begging and whining is fun, especially when you are too stupid to realize you did it all because of me. Why, your rage got you so upset, you resorted to the very same language you said dogie was wrong for. That makes you exactly alike, only we already knew that even when you were denying it and playing in the same outhouse. Another lie you were caught in. I'd say all that puts your choker chain firmly in my hand. :)

Thanks

"For whatever, don't mention it. Already told you I am happy that you find light in my posts to bring into your dark world."

for outlining your delusional beliefs. But since your post only repeats your unsupported claims (for the 1,529,034th time), and are still unsupported by facts, they carry no weight.

"Then why do you care what I say?"
:)

When are you going to start dealing with reality, twisted?

"Again, why do you care what I do? The anger is the same as lelands....hahahahah! That damn busybody stuff gives you away each time. You need to worry about yourself and not my reality, son."

When are you going to back up your BS with some facts instead of quoting imaginary shrinks and diverting attention from valid arguments? Never, I hope. If you did, you would ruin my fun!

"Oh don't worry sparkles. I will be here for a long time. If I knew I was able to reduce you you to a blubbering, crying, laughing stock of the internet with just a few keystrokes, I would have burnt a whole in your dress long ago."

Whoa! Whilst I don't always agree with Dave, I will point out that you will see my posts almost any time of day or night. This is due to my working a "fireman's rotation" - I work two 12 hour days followed by two 12 hour nights followed by 4 days off. I assure you, this is NOT a sign of unemployment. I may post at almost any time of day or night.

As to the other post, hams have some exclusive bands and some shared bands. 40 meters comes to mind. It is shared with international broadcasting (I believe above 7.200 MHz). I remember when I built my first receiver. I got the tickler coil reversed, but radio Moscow came in loud and strong. I fixed that quite quickly. As far as the hambos go - I am one. Does that bother you? Frankly, I don't point fingers at either CBers nor at the amateurs. There are a couple of loose screws around here, but that doesn't make any whole group responsible for the mess contained herein. It is just a few (maybe 3 or 4) fruitcakes. The rules are for a reason. If you have someone close to you killed by a drunk driver going the wrong way down the freeway, you will understand this. Obviously, one doesn't want someone working skip on 54-60 MHz if you want to watch channel 2 television. We all have to learn to live with each other. That is what the rules are about. The electromagenetic spectrum is a shared resource. I happen to subscribe to DirecTv. Obviously, I would not be crazy about someone using that particular portion of the microwave spectrum to build an experimental radar set.

Oh well ***rant off***

I seriously would not recommend a wall rat. They have poor regulation and may introduce hum. You should be able to buy a decent regulated supply - whether a switching supply or not - fairly cheap, and you won't have problems with either hum or excessive voltage on receive (or inadequate voltage on transmit). Most of the plug in wall jobs are rated for a certain current draw. If you draw less, the voltage is higher; if you draw more, the voltage is reduced (plus the hum problem). Not recommended.

>won't email you because you might be Leland."

Well, then what better proof than my own admission? Oh, that's right,
you are not interested in proof. I forgot that everything is the way
it is because you say so.

So what's the fear, twisted? Is it that you are really not who you say
you are? Could this be the lie you are trying to cover up? So is Gyer
some bully that used to beat you up in grade school?

Sparky, FLCD

5631. 'PLAYERS' IN 'THE GAME' WANT TWISTEDHED GONE

Newsgroup: rec.radio.cb

Major and minor players in the illegal CB trade are becoming aggravated with Twistedhed's escalating lack of self-control. The following are quotes from only a few of those questioned.

"That asshole's antics brings down heat on us. We can't get no business done thru the NG anymore. This makes us very unhappy"
- Dave of DAVEMADE

"We haven't been able to advertise in rec.radio.cb with all the bullshit this Twistedhed clown started. Our sales of amps and exports are suffering"
- Sean of EXPRESS ELECTRONICS INC.

"This NG used to be our private clubhouse, a safe haven where competition boys could exchange information. Now this Twistedhed dude is drawing flames daily and making it a mess" - Dennis O. of X-FORCE

"Even my little illegal mod business is feeling the pinch. Twistedhed really fucked up the NG for us. Somebody ought to have a talk with him, if you get my drift, heh heh" - The Phoneman

Greetings!

A lot of times, a radio can be tuned by ear, or by meter. You don't always need a scope to check results.

A good tech knows what needs to be done and simply does it. If it works, then the tech has the option to go into the finer aspects of the radio and improves on the designs' limitations imposed by the manufacturer.

Many simpler problems are fixed without having to use high caliber equipment. A dead transistor or a bad cap can be found a lot easier by simply operating the radio and determine the problem from experience.

Experience is the best method for determining the problem and the steps to correct it. The meter, scope or tuning fork is simply there to back it up.

Andy,
I have often times found that tuning a radio by ear to the receive of another radio works well when getting the SSB lined back up. Using a scope and signal injector sometimes just messes things up because there are so many radios out there that are already out of tune.
Good point as usual Andy.

Thank you for the info, Train! By DSB, do you mean instead of SSB or in addition to SSB?

Also, how does the D300 compare to the 201A?

Thanks again and 73,

So what's the fear, twisted? Is it that you are really not who you say you are? Could this be the lie you are trying to cover up? So is Gyer some bully that used to beat you up in grade school?
Sparky, former troll turned masochist FLCD

"I guess it's the same logic that made you my whining slut of the ng that must beg and cry and apply your makeup to the point of it running down your beak all the time. Another classic case of your lies. Show where I said anything about who I was. Oh, that's right. You can't because you're lying again. But you lie all the time in a poor attempt to misattribute words. There you go, putting so much belief in what your porn posting luvbug says. Man, you are slow. And quite stupid. I illuminate your stupidity quite well, wouldn't you say, Sparkles?

you are still ignoring my post.
Sparky, FLCD
"YOu ignored first

You are correct

"I always am with you."

I ignored you

"Let the lies begin. Ypu have ever ignored me. Matter of fact, you break your chickenhaw neck to go out of your limp little way to shake your tailfeathers my way."

and your paranoid fantasies for many months.
  Do me the courtesy of answering the original question I asked you when you arrogantly stuck your beak in where it didn't belong, lied about it, then ignored it. It does have everything to do with you, because I say so.
I forgot again, you are omniscient.

"When it comes to you, I am your deity.".

I run your show, not you junior. You
are ignoring and running. You cried, You begged. You lied. You whined. You threatened the group. You tried blackmailing the group. You sniveled for your own ng. You pleaded for members., got none, and then stated, "this is fun!" That makes you a masochist.

Actually, it makes me a sadist, but I don't

"You do not understand the difference. Go look up the difference and come back with your chickenhead hung low. You on the receving end makes you what I said. You not realizing what I have done to you makes it even better."

suppose you understand the difference.
  All you can say, over and over, is I may have an ID post or two wrong, but I don't, and it makes you whine even harder and break your neck out here to try and discredit anything I say, only you can't, so the best you can do is stutter, "NANANA you don't know who we aaaaarrrreeee." Haha!
If you are not wrong, then there is no harm is finding out the truth, is there? So why do you keep refusing to do so?

"Hey, noone is stopping you from doing anything you want. Go to it."

You are right, watching your actions of pathetic begging and whining is fun, especially when you are too stupid to realize you did it all because of me.
You are absolutely correct! It is all because of you.

"Of corse it is."

All this flaming, the pornographic posts and websites, the gay-bashing, gender-reversals, and idiodic trolling is all because of you!

"Like I said. Let the lies commence. You really ought to do a search and see how Dogie came in here instead of ignorantly saying something as truth. But you are so full of lies now, it doesn't matter. Glad to see you finally understand the control I have overyou and Dogie."
"
Holy shit, I think you are starting to figure it out! (maybe your imaginary shrink wasn't such a bad idea after all)

"He isn't a shrink, he is a behavior specialist."

  Why, your rage got you so upset, you resorted to the very same language you said dogie was wrong for. That makes you exactly alike, only we already knew that even when you were denying it and playing in the same outhouse. Another lie you were caught in. I'd say all that puts your choker chain firmly in my hand. :)

Is that the same choker chain you restrain your puppies with when you beat them?

(Twistedhed) wrote:
Thanks
"For whatever, don't mention it. Already told you I am happy that you
find light in my posts to bring into your dark world."

oh brother,.

for outlining your delusional beliefs. But since your post only repeats
your unsupported claims (for the 1,529,034th time), and are still
unsupported by facts, they carry no weight.
"Then why do you care what I say?"
:)
Because I am always looking for you to stick you foot in your mouth so I
can troll you about it later,

"No wonder you need two more pervs to help you. You haven't done
anything you said would do."

that's all. Funny thing is, everything that you have said about yourself
you have denied, and if it was about someone you don't like you can't
support it. You are, effectively, trolling yourself,

"Whatever you want to call it. As long as I can make you cry and beg and
whine so well, you can call it the moon for all I care."
"
but without most of the lameness. That's what makes it so funny.
When are you going to start dealing with reality, twisted?
"Again, why do you care what I do? The anger is the same as
lelands....hahahahah! That damn busybody stuff gives you away each time.
You need to worry about yourself and not my reality, son."
And again, when are you going to back up your BS?
When are you going to back up your BS with some facts instead of quoting
imaginary shrinks and diverting attention from valid arguments? Never, I
hope. If you did, you would ruin my fun!
"Oh don't worry sparkles. I will be here for a long time.
Goody!
If I knew I
was able to reduce you you to a blubbering, crying, laughing stock of
the internet with just a few keystrokes, I would have burnt a whole in
your dress long ago."

That thorazine just doesn't last very long, does it?

"Doesn't seem to. I keep putting you down and your beak keeps coming back to my rear. Must be another of your side effects.
Sparky, FLCD

DSB when talking about old Tram radios is that they broadcast on both upper and lower at the same time when in SSB mode. The receive is what you are actually setting to upper or lower when putting the radio in SSB mode. Titan II, Titan IIa, 201, 201a, and if I remember right, the Titan IV also where DSB radios.

******ATTENTION*****

Check it out.

We AntiTwistedhed Group members gave completed phase 3 of the plan, which called for mind-altering experiments to be carried out on Twistedhed.

They have been successful.

As evidenced above, he believes he speaks to a person (Leland) who does not even post in the NG any more. He also believes Leland is Sparky, despite actual evidence to the contrary.

Gentlemen, in short we have done the impossible. We have separated Mr. Twistedhed from reality in an extremely short time and made him into a raving lunatic.

Phase 4 shall commence.

-AntiTwistedhed Project-

Wait a minute, Twisted. We helped you decide that every post that criticizes you is being made by Leland. Now if Leland is Sparky, then how can he blame himself? The only possible explanation is that Nixon is still alive and he's plotting against you. (Oliver Stone has the details)

Subject: Re: Fw: Advice appreciated on quality brand/model CB radio

Thanks so much for your advice. A lot of what you said I didn't understand in the slightest because I'm so new at this, but I'm keeping all the great advice I got so that I can reread as I start learning. Doug Adair lived with
me here in the Chicago area for a few months a couple of years ago, so the local ham scene is something I don't really want to get involved with, tho I don't know if he's still in the area or not. I always enjoyed my father's CB
when I was a kid; thought it would be fun to start up again.

Thanks again for the advice!

Maggie

YOU STAYED WITH A LADY AND STILL DIDN'T GET LAID!!! BWAHAHAHAHAHAHAHAHAHA!
YOU ARE A FAGGOT FUCKSTICK! HAHAHAHAHAHAHA!

Hi all, I just picked up a TRC-431, got a deal on it. I have been in radio for 11 years and have never heard of this radio. It is a base, can anyone give me any info on it at all? I think if is from the late 70s, no info on the web site on this radio but ZI really really like the thing! It is a very nice radio and works great! Does anyone have experience with this, good bad other, anyone know when the radio was really out, other oppinions on it, common problems, anything at all? I would really apreciate it. Feel free to email me if you don't want to post here.

Below you will find a post, taken from a private message forum, that I found to be quite interesting... After thinking about it, am going to have to agree with it... Ham is just that, a hobby. There is no real purpose to it... How many truck drivers do you know that use amateur frequencies to communicate with each other and everyone else on the road, aside from the rare few that get up into the 10-meter band even though they shouldn't? I know of none... Good point, and well taken...

Bert I would not waist my time with those arguments. It is not about Ham radio, it is a bout me, me, me, I, I, I. I have never seen a group of people who like to see themselves talk as those who responded to that topic. It is only about one thing freedom. We have to fight with oppressors every day because people are afraid of people. Many of the high and mighty people even though they get their ticket are still the same week spine individuals who still think Clinton did them well in the White House. CB and freeband is the mode in which the men that support the infrastructure of this country (truckers) communicate. If all the Ham operators where gone tomorrow It would not make a one bit of difference. Take the CB's and accessories away from truckers and the whole machine will come to a screeching halt. More people are saved every day buy truckers on CB than by Ham operators in national disasters. Let them stop kidding themselves the prima-donnas. Ham radio is a hobby and CB radio is an integral part of the trucking industry that influences every ones lives especially those trucks carrying those Kenwood's and Ameritrons to AES and HRO.

Greetings!

I see that you may not understand the issues about the simpler things that many inexperienced techs spend, or waste, a lot of time on, can be fixed without having to waste bandwidth on silly postings about their own shortcomings.

I guess I'll have to explain it to you...

There is a difference. People that spend good money on equipment don't always need to use it to diagnose a problem.

Can you use a scope to find a dead trace? Yes you can.

Can you use a DVM to find that same dead trace? Yes you can.

Will a scope tell you the value of a resistor? Only if you're good in theory and have the support equipment to check that value. [If you get anything on the display] Keywords: Support Equipment.

A DVM can tell you that same value, and you don't have to trip over the test leads of the scope to do it.

What was that? A loud crash?

Oops, sorry to see that you got tangled up and dragged your scope off the bench because you had to find a dummy load.

Maybe you should bolt the scope down on the bench next time.

Did you check the fuse? Thats always a good idea.

Health is a concern too, if you're blind and/or deaf, you shouldn't be working on radios in the first place. See above...

A dead transistor is a dead transistor - whether you use the scope or not. A DVM can tell you the same information.

How does a tech know if the transistor or the resistor is dead? That comes from experience. Please be sure to turn the power off first. Otherwise that gentle warning about fuses might turn out to be an expensive repair bill on that scope even yourself couldn't fix. See above...

If you want to waste time on a chassis you know has aged, then please play with the scope until you're blue in the face. You just might find the problems that anyone else using simpler tools will find a lot sooner. Visual and audible acuity are needed, let alone dexterity. Disposable income is optional. See above...

Now if you like using extension cords, you might want to plug in that
golden screwdriver and try it yourself. Be sure to install the proper
rating of fuses first. I don't want to hear your yell. See above...

And I also don't want to read your writing on the bathroom walls
because you couldn't find the obvious fault that someone else named
Murphy did a whole bunch of laws about.

"The simplest problems that frustrate engineers will
be pointed out and solved by the casual observer."

If you buy a Saab 900S, and expect to go four wheeling, I know you'll
enjoy the ride. You might want to bring along a snatch cord for just
in case. See above...

I hope these hints have been helpful to you. See above...

Greetings!

Makes a very valid point.

Funny you should post this, I was thinking about it the other day...

"CB's in general are the most cost effective and direct means of
public communication we have today."

It's far more effective than Cellular.

It's instantaneous.

Can save time, wear and tear, and lives - every day, at any given
moment.

Far better than Television or Commercial radio.

They are AM units that transmit in DSB. I have an almost mint
Range Gain I. The light blue paint is flaked in one place.
The chrome is nice and shiny. The front is unscratched, just a
little wear around the channel selector. I had to replace the red
light bulb, and the stock mike is cracked where somebody must have
dropped it. Anybody got a extra mike or plastic case for this unit?

An interesting post, but there seems to be a bit of confusion. Have you ever been in a situation where you have supplied emergency communications? I have. Quite a few years ago, I was stationed on Guam Island. A rather big typhoon hit a bit North of us and took out just about everything on Rota (a small island in the Marianas). It took out a coast guard tower. There were no communications - period. They flew a chief petty officer to Rota to attempt to get communications going again to Guam, where they could be appropriately relayed. I was in the shack tuning around and heard 'sparkplug' (US Naval Communications Station) and 'sparkplug1' (the tactical callsign assigned the chief). They had problems in that although the signal was strong, the commsta kept insisting his signal was 'garbled'. I looked at the other guy in the shack and stated 'well, in an emergency, anything goes. So sue me.' At this point, I called both stations and moved them up into the 75 meter phone band. After about 10 minutes, our station (then KG6AAY) was asked to pass traffic direct to ComNavMar. I had to go on duty about that time and the other fellow took over. Later, after getting of watch, I found out that Captain Delany had personally gone to the shack and secured the operators there from all other duty. They were to man KG6AAY 24 hours a day until he said otherwise. For three days, amateur radio was the ONLY link between Rota and the outside world. For what it is worth, signals were around 30 over 9. Rota was located about 45 miles away. My questions are these:

1) even with a 240 channel CB, how would you have contacted either station operating a bit over 3.5 MHz?
2) would you have maintained solid communications 24/7 over 45 miles?
3) would you have accurately copied this on paper (all of our guys were trained radio operators - I could push a 100 WPM teletype to its' limit in those days)?

For what it is worth, a lot of trucking around here (no, not interstate trucking) uses the 450 MHz business band. Using repeaters allows them 24/7 coverage over a large portion of New York State. Oh - some of them use trunking radio up around 800 MHz.

A couple of years ago, there was a big ice storm up around here in the North East. Watertown, NY, was without power for over a week. I did hear that one of the amateur repeaters was pressed into use by the sheriff (since the ice took down their tower). Kinda tough to do on 27 MHz. Again, a 450 machine is quite close to the police frequencies - if it is a type accepted device, there should be no problem with the cops using their transceiver through the amp and antenna up on the tower. In an emergency, I doubt anyone would complain anyways. They were calling for amateurs with HF capabilities. Reason? Power (and telephones, etc) were out for hundreds of miles. Skip would have been very rare then as we were not yet near the

maximum of the sunspot cycle. Communications over hundreds of miles was necessary. Easy on 80, 40, or 20 meters. Not so on 11 or 10.

The fact is, that Guam thing never made the papers. No one (except the base and people involved) likely ever knew about it. Another fact is that there are a lot of truckers out there. I certainly would help someone if I could; but their numbers make it likely they will often lend assistance. Certainly, however, in the big outages the number of messages handled and search and assist missions will result in a LOT of assistance to a lot of folks. I suspect the traffic we handled that time on Guam likely outnumbered all of the assistances rendered by truckers over a couple of years.

That said (before we all get out panties in a knot), let's face fact - the cell phone has eliminated much of the need for either CB or amateur radio. The internet has certainly largely eliminated any need for them on a day to day basis as well. As far as trucking goes, if you aren't involved in real long distance hauling, trunking or business band radio is much more reliable. Heck, just with 6 aa alkaline batteries, I've got a solid 24/7 coverage for over 40 miles in all directions (including into Canada). Put a 40 watt mobile into your truck with a good antenna (maybe 30 inches tall AT MOST) and your range will likely be 40 miles or more to a repeater, followed by another 40 miles beyond - and I am talking solid, noise free, FM communication. Switching repeaters will allow coverage for a hundred miles and more. Hmmm ... come to think of it, one of the repeaters locally is linked to several others. 440, 2 meters, 6 meters, and, yes, 10 meters are linked. Europe does come in. It's a fun hobby as is CB. But business is better served elsewhere if possible, simply because of the reliability (or lack thereof) of 11 meters. Too much chatter and skip for reliable communications (by reliable, I mean talking to a desired station known before you start the trip - not someone you decide to talk to during the trip because you hear him).

73 from Rochester, NY
Jim

: Andy,
: I have often times found that tuning a radio by ear to the receive of
: another radio works well when getting the SSB lined back up. Using a scope
: and signal injector sometimes just messes things up because there are so
: many radios out there that are already out of tune.
: Good point as usual Andy.

That is fine, as long at the reference radio is on frequency itself. But if it is, then the signal generator etc will produce the same results. The only difference is that the SG will do a more precise job.

If you listen to the radios out there, you will find that many are way out of adjustment in regards to frequency. Tuning the transmit frequency to the receive of a random receiver simply creates another out of tune transmitter.

There are times when adjusting something "by ear" is sufficient. But it will never produce the precise results that you will get by using the proper test equipment in the proper manner.

: Your auction reported to FCC. :)

You must be about the only person doing so. Riley stated that he gets about 10-20 complaints a week via e-mail. Why bother the FCC, E-bay cancels such auctions themselves.

By the way, if E-bay were to follow their own policy, then no Amateur transmitters would be allowed either. ALL of them are capable of transmitting on frequencies for which they are not authorized - even if unmodified.

>

I am going to guess that being 'limited' offends you as a Red-blooded American and you have thoughts of tweaking the limiter or destroying it in a search for more Mod-u-lation. You can, of course, do what you like but you might want to consider that doing so may cause you to distort and actually lose 'talk power'. Here's why.

1. There is no way to get more than 1 watt of audio in each sideband of an AM radio with a 4-watt carrier (which really doesn't carry anything, it just sits there looking stupid). Should you try, the excess audio will be used to generate spurious sidebands beyond the bandwidth of any receiver you are talking to, cause distortion because at some point you ask the final to produce less than zero power, and generally cause you to become a pain in the drain. So the limiter's primary purpose is to keep the sideband power from exceeding 50% of carrier power and keeping the crap level to a gentle ladylike belch.

2. While the peak is limited to 2 watts (1 per sideband) the human voice typically has a peak to average ratio of about 4 to 1 so your average audio is really one-quarter watt per sideband. Now if the preamp is goosed a tad so that the limiter comes into play more often, you can raise the average to peak ratio to 33% or 40% giving you actually more talk power than without the limiter. This is done in broadcast stations all the time.

It is a good idea to have this close to the maximum but it takes an audio generator and a scope to set it right. Most rigs are set pretty close to begin with.

Don't let them sell you a 'swing kit' or Super Modulation mod. This is a bit of idiocy from the 40s that accomplishs less than nothing. Most rigs have automatic gain control in the audio so that you can safely give your power mike a decent burial as well unless you really like background noise.

Sorry to tell you this but you are not going to get much if anything more out of a stock rig assuming it was tuned correctly to begin with. Having Wun Hung Lo in south China doing it does not inspire much confidence but Dirty Harry down at the truck stop is worse.

Dick

I have Bigslack linux from Slackware on my AMD 500 with 64 megs RAM.
It is a free download, approx 300 megs. You need 900 megs disk space
at least. It is as easy to install as possible. You just unzip it, no need to
partition the hard disk, and it is as configured and ready to go as can be.
I have mine set up to use the internet, with browsing, ftp, telnet, irc and others,
and it even has x-windows and Netscape Navigator. I use it with a "winmodem"
too, which some claim can't be done, and I have sound configured. Bigslack
has a cd player, picture viewer, pdf viewer, and so many other utilities as to
keep a person amused for a lifetime, and it free.

>Any URLs to pass along for info?

Get Bigslack from

Hey Tim, how be ya? Well, you answered one question .. that leaves two others. Also remember, no towers around. Throw the wire up somewhere (best have an antenna tuner - it will likely not be resonant, unless you want to spend time cutting and trimming). And no 110 volts (although you might well have a generator - the chief did take one with him).

Bear in mind I am not putting CB down. You may well tend a small flower garden in your yard. Someone else may be digging a foundation for a house. Do you really want a backhoe for your flower garden? Are you really going to dig a foundation with a garden spade? Does a golfer go out on a golf course with but one club? Why? What was done on Guam may well have been done on 10 or 11 meters - but I doubt the chief's antenna was up very high. 45 miles may be doable (actually, you could likely go quite a few more miles), but the signal levels on 75 meters were very much higher than you or I could have achieved on 10 or 11 meters, plus it didn't require much power. On the other hand, for phone patches we went up to 20 meters (usually, although I ran one patch on 10 meters running 15 watts rms into the feedline - then later pumped it up to the full kilowatt).

Reality sets in. Rather than fighting one another, it would be nice to see the hams and CBers joining forces. There are a lot more CBers than hams - and that helps quite a bit on the local level - yet, the hams have access to the other tools (bands) that allow much greater coverage, both local and dx, if they simply choose the proper tool (band).

When I mentioned the 40 mile plus coverage on the batteries, that is from a given repeater. I can hit repeaters over 20 miles away (add the 40 miles to that). I have good use of 6 repeaters right now; had I not lost the gain antenna during jury duty, I'd have access to 6 more on top of that. Whether I replace it with the same or buy a higher gain antenna I don't know. The big antenna is over 30 inches high, and I'm concerned about the strain on the BNC connector. That would give me solid access to the Bristol Mountain repeaters (probably 30 miles from me) which have TREMENDOUS range over a good part of the state.

Barry, thanks for the link. I may give it a try. Disk space is no problem, but my 56k dial-up modem is. I am on the verge of switching to a broadband connection (lightning link from the local phone company - they have upgraded it and it is faster than cable modem). I'm paying $14.95 for my internet and another $9.95 for call forwarding plus caller id. It would only be another $15.00 per month to go with DSL. Right now, either I'll have to upgrade or ask a friend to download it and burn it on a cd for me - I shudder to think, I download only a bit over 13 megabytes per hour right now and I'm not ready for a 300 MB download!

Thanks for the link and 73 from Rochester, NY

Bill,

Not so! Maybe in the past, an amateur transceiver could transmit out
of band. That has changed. When I bought my 2 Icom 706s, I had to
have them modded by the seller and provide them PROOF of license for
the service I intended to use it for. From the factory, the 706s will
listen from broadcast to 500 MHZ (MKIIG), but if you transmit, it will
just beep.

Jerry

Maybe because they are just out picking mushrooms. But nobody is innocent when twisted is on guard, they are all trying to rape his woman and kid, so he shoots at anything that moves. College kids picking mushrooms? Blast them to hell! The kids deserve to die if the if they are dipping into his hallucinogenic stash. Fuck justification, twistie is all that matters in this world -- just ask him. Reality is only an inconvience to him.

Do you think the laws are unfair, twisted? Have you been harmed so much that you take it out on the ng? Get over it. Are you so fucking stupid that you can't see the only common factor in all this bullshit? The common factor is YOU, twistie, you are a fucking IDIOT. You personify everything that is fucked up in this world. You are a narrowminded, arrogant, shit-talking, dog-beating bigot, and you are proud of it. Do you really think that any sane person is going to believe any of your delusional crap? Of course you do, or else you wouldn't be barfing it to avoid every post that challenges your bullshit.

You have been through this before, accusing people of forging posts and jumping on your shit. But they had good reason to do so, because you are an asshole. The difference now is that I won't stop. You won't be able to post anything without me telling people just who and what you are. And I will tell them how and where they can find your posts and make their own decisions. And I'll tell them where they can find my posts, too. You can feed this group all the delusional bullshit you want, but nobody is going to talk to you if they have the ability to read. Or do you really prefer fanning the flames?

You really need some professional help, because reality will go on with or without you, and you can't accept that. You can choose to ignore reality, but reality will ignore you. Life will continue

without you, Twistedhed. Why don't you just face up to your bullshit, suck down your pride, and admit that you are a moron?

Do you need proof? Didn't I tell you that you provide more proof each time you post? That's because the proof lies in the fact that you have continued this crap for MONTHS, even before I stuck my "beak" in this mess. Don't blame ME for flaming you, since your bullshit started long before I did. You are just too fucking IGNORANT to see it or admit it.

And you must be an idiot to think that nobody knows how to decipher the webtv signature line, just like I can. And some people, like me, have logged your entry to their webpages, and don't need your email them to confirm your identity (HA!). But you are too stupid to realize things like this, and it's so much fun to watch you avoid what you don't even know has already happened.

Find yourself another alias and behave, or this will continue for as long as you continue to spew your vomit in this ng. Or don't. I don't fucking care. I live fo expose pigs like you! I prefer that you keep posting your garbage for as long as you want so others can see who and what you really are!!! How much exposure do you want?

Sparky, FLCD

Sounds good. I can't get broadband here. I downloaded Bigslack over
several days leaving the computer on overnight.
There are 32 files of just under 10 megs each, so you don't need to download
it all in one sitting.
Another option would be to buy linux on CD. You can get the CD and a book
for a nominal sum since linux itself is free.

>Thanks for the link and 73 from Rochester, NY

Not completely true.....
Many Ham HF transcievers will transmit out of band, out of the box... no
mods.
It might be only 500 khz or so per band or less, but many come that way.
Ham UHF/VHF rigs are, in many cases, capable of out of band ops with only a
few 'button pushes'.

One option that I have used is to run the ground to where the battery ground attaches to the engine. That system is designed to take lots of current. Run the positive directly to the "hot" side of the starter solenoid. That connection is also designed to take lots of current. This way you won't have to modify the battery terminal connection and possibly introduce future problems there. Some cars use plug-in starters and solenoids so this won't work. In this case you might be able to connect your wire to the bolt that is used to tighten the connection to the battery. Cover the connection with silicone grease to prevent corrosion.

And every ham transmitter is capable of transmitting beyond the limits of
the station license.
Even as an Extra, I can't transmit SSB at 14.025 yet the rig is certainly
capable of it.

Greetings!

I can agree to use a SG, but when the SG is off - the point of the thread being using your ears is the catalyst.

Last time I knew, CB radio was voice/audio based. So, yes, you'd have to use your ears in order to listen, let alone diagnose a problem.

Sigh... Now we're onto Signal Generators...I was talking about repair of radios using simpler tools. Train re-interated the point of known reference.

Are we going to have to change the topic to cover the finer points to include heterodyne?

A mis-aligned SG can be the foe that makes nightmares a reality when trying to help newbies on SSB - let alone offer a legit radio check.

I have a bone to pick then...SG's are not always on frequency. That doesn't exclude frequency counters, or a Spectrum Analyzer either. All use Xtals for reference - and accurate to a point. When the original reference is off, then all bets are off.

Bill,

Although I would love to agree with the "calibrated" reference that a signal generator could provide, I've found that a local tech at a CB shop near here is in dire need to have his equipment re-checked and recalibrated.

Lately he's been selling CB's that are 1.5 to 2KHz above center frequency. How do I know? Because I've had to re-set the PLL Xtal reference by adjusting the trim cap on three separate radios sold by the shop. Each one of the owners has claimed that this tech has "tuned-up and calibrated" each unit.

Calibrated? To what? I ask - and they can't answer.

I don't like slamming a local tech for doing his job, but ignorance is not going to help any either.

How do I know? By using a calibrated reference from my own station.

I've also verified these to other factory stock units that are fresh out of the box, and are usually within 500Hz of center frequency - not a big deal. But 2KHz? Thats more than many CB's using Delta tunes, Voice lock and clarifiers can adjust to! At least you can tune in to the other factory-set radios.

I use a frequency counter from Optoelectronics - a 6010 - an oldie but uses a Crystal Oven to make the Xtal stable and has a neat feature that allows you to use it's 10MHz output to zero-beat against WWV - it also can be use to re-calibrate other portable units.

I take a moment and set the unit about every six months on my bench, due to age and drift. Although it's recommended that you only do it once a year - I double check the unit to be sure. It's never really off, just the amount of time it needs to stabilize varies with the seasons. Once the unit is calibrated I can then use it to set other time references on my bench.

The other tech that is pumping out these other radios has been dickering with the locals in a position like myself, and ignoring the issue of resetting his SG to zero beat with a known reference.

As far as once you have a calibrated radio - that is set to a known reference, the rest can be tuned by ear in a far more efficient fashion.

When you have a tech that uses equipment that he tends to follow more closely that is known to be off, this person even goes as far as to re-adjust the trimmer caps to makes the radios he sells purposely off - what is the point? Warranty?

The whole point of my posts in this thread is to address that experience in repair of radios does not always rely on high-caliber equipment. If you want to use a scope to find a burnt resistor - go ahead. The rest of us will use what facilities we have, like our eyes and ears and a trusty DVM, to locate the problems.

On 29 Apr 2001 02:15:39 GMT, while the modem was busy tying up IRQ's with the Mouse, Bill Nelson <billn@spock.peak.org> dissertated the following:

Andy,
My point is that using a known source as a base is fine. This was not to get into the finer points of SG's or scopes and IS to say that the known source in this case would be and of the radios in use in the local area. I have set many a radio to my own Galaxy Saturn II or Drake R-7 or 757GX. My theory is along the same line being that the known source is usually suspect as well. There will always be those who will tell the person on the other end they are off a little from where the listener is listening. That is fine with me . The point should be that the owner of the radio in question shouldn't be running out to get the radio aligned because of the opinion of other people who may themselves actually be running off "dead center". My greater point would have to be just this.....It's only radio!
Radio is here for us to have a good time with.
Train

5771. Deadkey Feedback w/D-104

Newsgroup: rec.radio.cb
Date: 2001-04-29 19:09:04 UTC
From: Mad Dog <lgssl@netzero.net>
Message-ID: <9chp0r$dtrsv$1@ID-20128.news.dfncis.de>
Source record: 80346

Howdy, I just installed a D-104 desk mic. on my 2950.
The 2950 has talkback and i use a external speaker placed as far away
from the mic. as possible, I cant turn the gain on the radio more than 3/4
up
and the gain on mic. more than 1/2 without getting feedback on a dead-key,
no modulation in a quiet room. Is this normal for a D-104?
The talkback is loud, maybe the mic. is picking up frequencies i cant hear
and sending them back thru the speaker.....
Any ideas how to solve this dilemna, or is turning down the talkback my only
option?

That is very normal, only thing you can do is keep the "talk back" turned
down, or tun head phones instead of an ext speaker. I have run that combo
of radio and mic and didn't have to run it near that hard anyway.

That is the problem with the typical CB mentality turn it all the way up til it stops then turn it up some more. . why not turn it up till it doesnt squeal and leave it at that. Most people who do install d104 and other power mikes turn the mike all the way up and the mic gain all the way up if it was put on a meter it would show way over 100% modulation and distortion, They then ask for a radio check and some smuck who has never heard a good sounding radio says "Yeah you is loud and proud in my radio, your the loudest thing out there." and they are ripping up the band with over modulated splatter.

Yeah tune it to another mis-aligned radio. Ok you are of the typical golden screwdriver mentality. I would trust a SG against your ear any day because you are tuning to an unknown freq you are tuning to another misaligned radio. Train, I got a better one Ill key up you stand next to my antenna and tell me what freq I am transmiting on. Test equipment if used "properly" by a competent technichan who knows how to use it is by far the best way to go.

That said (before we all get out panties in a knot), let's face fact - the cell phone has eliminated much of the need for either CB or amateur radio. The internet has certainly largely eliminated any need for them on a day to day basis as well. As far as trucking goes, if you aren't involved in real long distance hauling, trunking or business band radio is much more reliable. Heck, just

Can I please be permitted to SLAP you, James? The ONLY thing that Cell Phones have eliminated in CB or the Ham bands is the NEED to call the BEARS (Police, cops) in immediate times of emergency (Channel 9 REACT)--CB use, and Field Day (Ham use?). That is the ONLY fact. CB with truckers OR travelers is used for knowing WHAT IS IN the road ahead of them, either danger, or BEARS, or whatever. CB is LOCAL, other than W8Wimps and Clownbows skipshooting, which rarely happens on Ch. 19. Those FM truck radios are called "Company Radios." Some drivers have them AS WELL as a CB. Interstate or not, the CB is VERY reliable for knowing what is going on within 1-25 miles around you. The internet also has had NO effect on CB, other than joining up all the skip shooters on this Digital Skipland! I doubt if the net has affected the Hambos on a day to day basis as well. What it boils down to is that CB works best in certain emergencies, and Ham does it other kinds, and sometimes they both link up in certain emergencies, if a React team is connecting both together. When I call 911 to report a DRUNKEN key clown accuser over my Cell phone, the police hear what is comming over my CB as to the drunks exact location, and I am relaying questions from the cops to the people right there (like what color is the N8 Yugo)! The only loss of CB to the Cell phone is the rich older people's choice to go to Cell, ONLY for purposes of emergency. The po folks that is old use CB, cause they don't like the newfangled technology, since they use to or still spin the rotary dial to phone from the house!!!!

How do we know the SG is off?
That pretty much goes for anything andy, speedometers on cars, your DVM can be in-accurate as well so what do we do, we trust our test equipment until it gives us a reason to think otherwise. Test equipment should have period calibration as well, but in no way can the human ear detect what a properly working piece of test equipment will do

YOU tell them Bill ! You are right, but a story I remember from my days at Hy-Gain that I may of said before is this: There or some where else they were flying Engineers in from Japan to fix CB's, and when their visa ran out, they went back and another one came. What these CB engineers were observed in using to fix any problem was 1 piece of equipment, period. This was in '76 or 77. What was it? A Volt-Ohm meter, did they have digitals then? The guy knew so much about the CB that all he needed is 1 meter to fix any problem. I can see the reasoning in that, but for us lower Super Techs, it is nice to have that equipment!!!!
Dave!!!!!!!!!!

: Good point as usual Andy.

That is fine, as long at the reference radio is on frequency itself. But if it is, then the signal generator etc will produce the same results. The only difference is that the SG will do a more precise job.

If you listen to the radios out there, you will find that many are way out of adjustment in regards to frequency. Tuning the transmit frequency to the receive of a random receiver simply creates another out of tune transmitter.

There are times when adjusting something "by ear" is sufficient. But it will never produce the precise results that you will get by using the proper test equipment in the proper manner.

It took one post to make me realize just how far all this has gone. If you have any respect for my position and my posts, please just allow some time to cool off. You can be an active opponent of illegal operators without aggressive behavior, or provoking aggressive behavior from others - that is not the way to change the minds of those that are yet undecided. Demonstrate tolerance, respect, and integrity. You have done so up until now, and I respect that. I just ask that you don't cross the line.

>
> Sparky, FLCD

"Hahaa! Whassamatter Sparkles? In not even 30 days I was able to make you compromise all your values..hahahah! Oh, that's right. You lied again. Yep, you sure showed me. Let's have some more of that fun, shall we, short bus rider?"

Subject: Re: Not Guilty in New York
Newsgroups: rec.radio.cb

Date: 2000/02/27
Common practice 'round here. Loose lips sink ships, but dead men tell no tales. Sorta like, WHY fire a warning shot when someone is attempting to steal, damage, or hurt your loved ones, home, property, or possessions?

"LMAO! A Year? You searched a year worth of my posts and this was all you could do? You are a pathetic, sorry troll. I mean that. Not even a decent troll."

Maybe because they are just out picking mushrooms.

"Pretty hung up on that drug thing, eh?
Is that the reason your in a huff? No? Hmmm..I bet it has to do with your bud emailing me all the time. Yea, that's it. You are so easy."

But nobody is innocent when twisted is on guard, they are all trying to rape his woman and kid, so he shoots at anything that moves. College kids picking mushrooms? Blast them to hell! The kids deserve to die if the if they are dipping into his hallucinogenic stash.

"Wow, sparkles,that's harsh. It's not like they were robbing your dress closet or something.'

Fuck justification, twistie is all that matters in this world -- just ask him. Reality is only an inconvience to him.

"There you go sticking your beak in my reality again. Look pal, it's my dream and you're only part of it when I decide. "Course you already figured the validation thing out."

Do you think the laws are unfair, twisted? Have you been harmed so much that you take it out on the ng? Get over it.

"You get over it. I have no problems, You, on the other hand have many. Only one of them is me. Just how do you support all those monkeys on your yellow lying back?"

Are you so fucking

"See above in your previous post about profanity and getting upset."

stupid that you can't see the only common factor in all this bullshit? The common factor is YOU, twistie, you are a fucking IDIOT.

"Well, strike up the band for Sparkles hypocritic vernacular."

You personify everything that is fucked up in this world. You are a narrowminded,

"No true. Very open minded. Just closed to ignorance like yourself."

arrogant,

"You mistake confidence for arrogance."

shit-talking, dog-beating bigot,

"(Chuckle)" and you are proud of it. Do you really think that any sane person is going to believe any of your delusional crap?

"Sigh. You continue to ASSume over and over that I care what someone else thinks. That is you department, my personal poultry porn poster."

Of course you do, or else you wouldn't be barfing it to avoid every post that challenges your bullshit.

"Like the one above that shines of your lies and hypocrisy? (Chuckle) Oh boy!"

You have been through this before, accusing people

Wrong. Not people. You, Leland, Dogie and Kari. You started it and caught, now you whine like little girls and slingmud."

of forging posts and jumping on your shit. But they had good reason

"You also plagiarized (again) the subject from me, but it applies here. You are judge and jury here. We know you were part of the porn posse, and still are. As stated, you came off like a polite, knowledgeable dude at first, but I single handedly destroyed your credibility, especially in the above face smearing campaign you started and I won."

to do so, because you are an asshole.

"I really, really, must make you aware how much that means to me coming from a whacko perv like you."

The difference now is that I won't stop.

"Wow! You think anyone cares if you worship me even more? Damn!"

You won't be able to post anything without me telling people just who and what you are.

"My own personal ng slut and guide. How nice."

And I will tell them how and where they can find your posts and make their own decisions.

"Too late. I did that weeks ago. You must find your own lines, plagiarism is too high an art form for you to master."

And I'll tell them where they can find my posts, too. You can feed this group all the delusional bullshit you want,

"Sparkles fantasy:

but nobody is going to talk to you

Aheheheh! There is the arrogance again that shows that you actually think someone here in the group would have you speak for them. Oh, I think I saw Jeremy (Ahahah) playing cheerleader for you once or twice. Go get him."

if they have the ability to read.

"And there is that ever present cockiness that shows just where you place yourself in comparison to the rest of the members of the ng. For someone who professes to care so much about the ng, why do you continully insult them?"

Or do you really prefer fanning the flames?

"Pot. Kettle. Black. As usual, I disappear on the weekend and you escalate your trifling trash."

You really need some professional help,

"Why are you so worried about others? Same holier-than-thou-attitude that stripped you of your dignity here."

because reality will go on with or without you,

"Reality is what I say it is for me."

and you can't accept that

"HAhaha! NO! YOU can't accept that I allow you to play only when I dictate. You have a serious control issue and when someone like me takes all control and rational decision making away from you, you flip and spaz just like the ones you USED to condone. Now you IS one. HAHAHAH!"

You can choose to ignore reality, but reality will ignore you.

"But wait a secod, if you are reality, why are you not ignoring me?HAhah!
"
Life will continue without you, Twistedhed.

"Wow. How did I become so elevated in your home? Did you build a shrine to me?"

Why don't you just face up to your bullshit, suck down your pride, and admit that you are a moron?

"In the hypocritical words of yourself.....WHEN ALL ELSE FAILS, CALL NAMES".

Do you need proof? Didn't I tell you that you provide more proof each time you post?

"I think you do that quite well."

That's because the proof lies in the fact that you have continued this crap for MONTHS,

"Yep. When attacked, I will give it back. Don't care how loud you cry or lie."

even before I stuck my "beak" in this mess. Don't blame ME for flaming you,

"Blame? I don't blame you for flaming anyone. I blame you for your lies and trouble you start."

since your bullshit started long before I did.

"Yea. Your credibility is worth everything."

You are just too fucking IGNORANT

"Ooo...serious rage and uncontrol. I win again."

to see it or admit it.

"(Sigh) Stop worrying about what I see or think, busybody."

And you must be an idiot to think that nobody knows how to decipher the webtv signature line, just like I can. And some people, like me, have logged your entry to their webpages,

"Oh, so THATS what got your panties in a wad this weekend, going to your web page. Well, the only thing that could possibly upset you about that is that your lies are all done. You would have been better off keeping quiet about it, fool. I had no idea whose page I was at. Sorry, but I know you ain't Doc. Doc has his moments, but is way smarter than you, genius. But I see you are running scared and reaching for straws, anything to cast blame anywhere else, no matter who you try to blame. A baby deer in the headlights.....fool."

and don't need your email them to confirm your identity (HA!).

"Wow! Now you track my visits to cb pages. You really should see the sun once in awhile. Idolatry IS a sin you know, oh, that's right, you are an infidel."
"
But you are too stupid to realize things like this,

"Actually, after all this time one would think that you would learn something...I don't care."

and it's so much fun

"You keep saying that, but you sound extremelyupset and full of rage. What happened to responding with "intellect" as you so put it? HAHAHHAH!

to watch you avoid what you don't even know has already happened.

"Even your cohorts haven't told you yet, have they?"

Find yourself another alias

"I need no aliases, unlike you hurls."

and behave, or this will continue

"BWaahahah! More blackmail. You have done nothing except give a great big horse laugh to the world. AS you stated above, when all else ails, call names, well, all else has failed, all your threats, blackmail,

cries, threats to leave and take the ng with you (SHRIEK), and you are calling names. All else has failed you chickiehawk. You are all done, washed up, used up, and now you find yourself in my little paradox, where you must begin again with old tricks, such as blackmail and lies, that got you nothing but ridiculed."

You have for as long as you continue to spew your vomit in this ng. Or don't. I don't fucking care.

"Sure you do. You have no life except for me. Maybe I will go back and see how many times you have said that you don't care, or that you were leaving (mmmph)."

I live fo expose pigs like you!

"Naaaneeenaannaaanooonooo."

I prefer that you keep posting your garbage for as long as you want so others

"That busybody thing again."

can see who and what you really are!!! How much exposure do you want?

"Surprise me, Sparkles."

I have an interference problem with a neighbor, about 100 yards from my antenna, across the street. Let me tell you first, I AM NOT RUNNING AN AMPLIFIER....
The interference started when he purchased a new TV (a 35" Admiral/Montgomery Ward's brand). I am ONLY coming through the sound at a slightly higher volume than the program being watched. He is running the main CABLE TV line (RG-59U), into a 3-way splitter.., fed to 2 other rooms. The interference is NOT affecting the other sets in any way. I ran dual 12ga. solid-conductor wire, from the splitter to an 8 foot ground rod outside, into the ground, with an acorn nut at the top. THIS DID NOTHING. In addition, with his permission, and watchful eye, I removed the back cover of the set, and installed ferrite choke coils on ALL 4 speaker leads. THIS DID NOTHING. As a LAST resort, I put a High-pass TVI filter inline with the coaxial cable, just outside the back of the set. This ALSO did nothing. I was wondering, what am I doing wrong?? Is there something I haven't tried?? I noticed he has a SAP device inside this set (It simulcasts programs in different languages), I noticed it is on, and he doesn't know how to shut it off. The sound of the voice in SAP mode resembles the volume of the interference a great deal. He doesn't have the manual for the set, and due to this, can't shut the SAP off. He says my radio SHOULDN'T come through the TV AT ALL, regardless of the SAP... and I need to do something else to take care of the problem..... I'm out of options.......I've done everything I could think of...

Maniac.

Source record: 80210

Well, you said you were 100% legal. Opps, no you didn't.
You said you weren't running an amp! What ARE you
running? You wouldn't have a limiter clipped out, would
you? Some people just don't realize that a CORRECTLY
working limiter actually can make you 'louder' at the other
end, and give you a slight edge. But please notice I said
"correctly working limiter"!

Ok, assuming you are clean... and IF you are... It's actually
his fault. Actually, the TVs. It's great you did what you
did, but the TV people may have a solution they implement
for 'selected complaints'. You're getting into the TV may
have voided that. Can you take it out without leaving a trace?

Assuming the TV is new under warrantee, you might want
him to go back at the store. It could actually be a defective
TV. Cold solder points have a way of making TVI worse.

OK, let's move off the TV...

First off, and this may sound stupidly obvious, but have
you VERIFIED that it is YOU?

Now, if that's the case, how about some more details.

Do you come through ALL channels? ALL the time?
When you are on what mode (AM/SSB)?

And... If his TV has a VCR attached, is it 'cable' or
NTSC (RCA type plug) or S-VHS (din plug)?

Do you come through when he is watching a tape? If
you do, do you still come in when he is watching a tape
if you UNPLUG the cable?

Another trick might be to unhook his splitter and all the
cables and run a SINGLE line with RG-6 QS from the
house entry to the new TV and see if you still get into
that. If not, have him call his cable company and put
RG-6QS from the splitter to the TVs, and make sure
the splitter and all the cables are good and PROPERLY
grounded. (Hey, I got a shock off my stereo once... I
traced back, and found 110v on the case. It was from
the cable (for FM). Traced that back, and found the
service entry grounding block had a 12ga wire for ground,
that came into the house, across the rafters, to a power
box. And was attached to the box. Unfortunately, the

power box was put in by an idiot, who had the HOT
lead attached to the box!)

First thing is to divide and THEN figure out what the
heck you have to conquer.

Mike

Ok. The interference is not in the other sets. Assuming you were running AM or SSB, it shouldn't bother the tv anyways - the television is wideband FM for audio. Since it isn't in the other sets, it appears the one tv has a problem. It is likely that your signal is being demodulated in one of the low level audio amps. For starters, find out if he has the tv connected through an external amplifier system. If he does, it may well be being demodulated in the external stereo amplifier. The answer to this may be as simple as winding a few turns of the audio cable through some ferrite cores. This also applies to the speaker leads. Long leads can act as a dipole, feeding RF into the amplifier which may well demodulate (and amplify) them. Most likely, it is the fault of the TV - but don't try and scream this at him. People with poorly shielded audio amps, televisions, telephones, etc. just don't want to hear that - they want you off the air. Show him your set does NOT have the problem and inform him that it can probably be easily fixed. But don't apply the 'golden screwdriver'. If anything goes wrong after you touch it, YOU'LL be at fault. Hopefully, things have not degenerated to the point he is difficult to talk to. As mentioned elsewhere, make sure it is you that he is hearing on his set.

Best of luck and 73 from Rochester, NY

You might want to go to http://www.fcc.gov and download the interference manual for him to read or have it sent to him.

1. Sound interference without disturbing the picture is unusual to say the least. And apparently on every channel to boot. This is not classic TVI.

2. Stereo and SAP (second audio program) on U.S. TV sets is double-sideband AM for reasons I cannot fathom. He had better figure it out unless he likes listening to Spanish. It is more than likely on a menu somewhere along with closed captioning. There is at least the possibility that the SAP decoder is the source of the problem and you are doing nothing wrong.

3. If your modulation levels have been dorked with it is also possible your trash is being read as a subcarrier.

What is needed here is a conference among the warranty service house for the set (only because the factory typically does not talk to anyone else), the cable company, and the owner with your one and only contribution being to provide a signal on call. You have gotten in too deeply already. If you are legal, you have nothing to gain and everything to lose by implicitly assuming responsibility. He can want you out all he likes - I'd like a few hundred $20 bills delivered with my mail every day - but given legality it is not your problem.

Well, before you slap, consider a couple of things. Yes, CB can enlighten you as to what is going on around the roads. Same can be said for 440 FM or 2 meters (depending, obviously, where you are. In large cities, it works wonders). One point you do make well is that CB WILL have a lot of traffic info going on at times - heck, forget the bears - I'd like to know if there has been an accident or traffic is really knotted up somewhere so I can change routes BEFORE I run into the problem. Field day is just a fun type thing which provides training for erecting temporary antennas and operating on portable power - useful in case of a large area (such as the ice storm) emergency. Otherwise, 440 FM gives me plenty of what I need - including the capability of autopatch (patching into the local phone system from the HT). That said, often it is just simpler to call from a cell phone if you need to talk to someone (directions to someone's house comes to mind). Granted, cell phones are not cheap, but they are getting a lot cheaper. Unlimited air time around here costs under $60.00 per month, which might sound expensive, but consider it costs me well over $30.00 just for an ordinary telephone - and you can travel far beyond my local standard telephone service area and still not be paying long distance charges from the cell phone in many cases! I remember some years back when I worked 28 miles away. The only way I could call home was from a pay phone - AT $1.50 per MINUTE!!!! If I went 1 second over 1 minute, it was $3.00! Money grubbing leaches (this was before I got the HT, but 28 miles would be pushing it a lot to the repeater I use for phone patches. 20 miles is no problem, but 28 is a lot for 2.5 watts on an HT). Finally, as to the cell phone being for the rich older folks, you would not believe the number of cell phone users amongst the operators at the company I work for. I don't know how they do it - they're making around $10.00 per hour and probably half of them (say 150 of 300) use cell phones - even at work. Of course, if they call the kids at home or their spouse to check up on what's going on, they save a 25 cent phone call. Most are paying 15 cents or less per minute and it only takes 30 seconds or so to check up on the. Once they have that cell phone to use at work, I doubt they would go and buy a CB or ham rig for a similar purpose. As far as amateur radio, compare just talking to someone to getting on the internet, getting music, meeting people, etc ..... I am sure it has affected the growth of amateur radio and possibly CB as well. Just my thoughts on it.

Have a gooder!

10-4 on the phone company's antiquated local boundries, which have changed VERY LITTLE in most areas in 50 years! And the knowing where traffic problems are, with the Bears, is what makes CB the Superior radio service! I didn't know that 2 meters has a "Channel 19." What freq. is it? Or does 440 too? What freqs. are they so I can tune them on my non-approved illegal cell receiving (not intercepting) scanner? ! You worked with "operators?" What kind of operators were they? Hospital or phone company? ! It's too bad you don't live near the "tank trails." I guess it costs to much for you to go on I-90 there in the land of Hillary! Maybe you can have her impeached! I have lived by Eisenhour tank trails all my life, and CB is used among the little main roads too.
Dave!

True, but we also didn't have 1 way streets back in the early 1900s when automobiles first started appearing. We also didn't have malls with a lot of parking spaces nicely marked out. There are a few more people and a few more cars than we had back then - how are we to share the roadways? Drive anywhere we want to? In any lane? The bands are coordinated between governments in an attempt to allow us all to share in the electromagnetic spectrum; otherwise, someone just might want to run FM on channel 2 television, hollering 'AAAAUUDIOOOO'. Hey, maybe a commercial FM station might want to do it just to be different and attract attention? Your cell phone might not work because someone else wants the frequency. Ditto long distance via satellite - someone wanted to put wrestling on the telephone satellite frequencies. If there were only 100,000 people in the world, you wouldn't need many rules. Steal my cattle or crops, I'll shoot you. That would be about it. Unfortunately, there are billions of humans on this little planet and we need the rules in an attempt to live together in peace (this works some of the time).

I no longer have a regular phone just for this reason... Around my area here, they have a local service aimed at replacing regular land phones. It's a digital service, which is good only within the area here, costs me $30 a month, and has unlimited minutes. It comes with all the nice features of a land phone, such as caller ID, call waiting ID, call waiting, call forwarding, three-way calling, etc, and the best part is they throw it all in for free. Not the extra $5 per month, per feature, charge to have it added to your line like the phone company wants, except caller ID, which they want $10 a month for. Being it's digital cellular, I can take it anywhere I go, can't say that for my land phone, not even with the new 2.4Gig phones and the extra range they provide, there is just no comparison. A far better deal than the phone company could ever offer me, they wanted $35 a month just for the bare-bones service.. I said goodbye to the line, and hello to the wireless age!

Be very careful introducing leads to this part of your automobile...Take
EXTRA care that they will never come loose or touch the frame(positive
side).If the hot lead gets "nicked" and finds ground -you best be fused or
you may have a fire on your hands..
Good Luck.

Thanks for the info. I suspected that this might be true in some areas. Actually, when I quoted the under $60.00 per month I should have added that was last year's price. Whether the local company is ripping us off or not would be pure conjecture (yeah, right!) - but let's face it - with wireless there are no cables or lines to maintain between the service provider and the user. It wouldn't surprise me to see the old wired telephones largely disappear over the next 10 years or so. The times, they be a-changin!

Ah Hillary .... be thankful you don't live in the 'Land of the Taxes'. The operators I mention are machine operators. They run machines that build product (including injection molding machines). As far as the repeaters are concerned, there are a ton of them all over the country. Usually, you will find a 30 to 50 mile range on them, although some are located higher and have more range. I usually hang out on 444.850 (my transmit side, 449.850 on my receive or repeater transmit side). The sub-audible tones used are different for different areas to minimize interference between different repeaters on the same frequency (especially if tropo conditions permit long-haul communications). That (444.850) is the repeater I use to patch into the phone lines. I also use 444.750 which was recently moved. From its' old location, my former neighbor could listen to me on her handheld scanner when I used the HT. She is located about 100 miles to the South of me. Not a bad range at all. I also use 444.825 which is located about 20 miles away. I have no problem and no noise hitting it directly from the HT. The last one that I use frequently is on 442.800. This is one of the megaplex ports (I can also hit 444.700 which is part of the megaplex system, but why hit that one 15 miles away when I hit one right here in the city). Anything on any megaplex units is relayed to all of the other megaplex system repeaters. This is so you can talk with people on other bands and not have to worry about what frequency or band either of you is using. When I am on 442.800, I am also transmitting on (and receiving from) 29.*** (yeah, 10 meters), 53.330, 145.410, 146.925, 224.580, 442.800, 442.900, and 444.700. I know there is another 2 meter megaplex repeater in there somewhere ... but, you get the idea. Yes, Europe has come in on the 10 meter link. You can listen to any of the repeaters in your area (probably any within 50 miles or so). The coverage can be quite something. Usually, if in a car, as you get past a good coverage area for your mobile, you simply switch repeaters. Base stations won't have a problem since they usually have some kind of fairly high gain antenna up 20 or 30 feet, allowing them to use repeaters farther away. The mobile simply changes to a repeater closer to himself. The repeater I mentioned that I use the most has fairly good coverage. I've yakked with mobiles in Buffalo, NY, Sodus Point, and Canada. Range seems to be up to 50 miles or so in most directions except South (the antenna is mounted on the North side of a commercial tower, about 300 feet up. Kinda shields communications towards the South). That is just one repeater - the local list shows two 10 meter repeaters, 5 six meter repeaters, thirty-two 2 meter repeaters, five 220 MHz repeaters, twenty-six 440 MHz repeaters, one 900 MHz repeater, and one 1.2 GHZ repeater. This list does NOT include television repeaters. While no repeater is dedicated as a particular channel, different groups often congregate on different repeaters. I know a bunch of the guys on .850, whilst I only know a couple on .750. You will find them dead at times, unlike CB. Or are they? I was taking the HT to work as we had moved and

the pay phones were broken and the office phones were not all installed. I used the HT to make my calls, but was bored one time around 2:00 AM (on a Wednesday or Thursday) and just sent out my call. I ended up with an interesting chat with a U of R professor who taught theoretical physics. Ya just never knows! All you need to do is get a repeater listing for your area and listen. By the way, the repeaters I listed before are not all local repeaters. These are the ones that anyone with a base station and a small antenna on the roof should be able to hit. Some are in Canada, some are located a fair ways from Rochester. It is fun, though, and gives noise-free communication over hundreds of miles. A scanner would yield a few more to listen for than you can reach with an HT, but you would need an outside antenna to receive all of repeaters I listed from here in Rochester. Height matters, just as in CB - only more so.

> cell receiving (not intercepting) scanner? !

It's not really a road assistance frequency, it is a "national call frequency" on 2m FM simplex. There is in general one call frequency on each band starting on 10m. The frequencies are 29.600 MHz (10m), 52.525 MHz (6m), 146.520 MHz (2m), 223.500 MHz (135cm), 446.000 MHz (70cm), 902.100 MHz (33cm), and 1294.500 MHz (23cm). There has been some calls for using the 2m national call frequency similar to the use that CB Radio channel 19 is used for. The protocol, to be used on any of the call frequencies, that is supposed to be used is a station makes a general CQ call, then once contact is established the two or more stations move to another frequency. I hear too many stations sitting on the FM calling frequency ragchewing for long periods, which ties up the calling frequency so nobody else can use it. I have also seen the same thing happen on sideband too. The stations which seem to be guilty of the poor practice is relativity evenly distributed among all license classes.

Did you scan your system for a virus or a Trojan Horse program? Some of these are well known to modify your winsock.dll file to do just what you claim is happening. Others muck around with the Windows scripting ability to do it. Getting another fire wall most likely won't do you any good if the security breach is happening on the PC side of the firewall. So before you do anything else make sure your system is CLEAN FIRST. As a further measure you can also try turning off automatic script execution. Also go the Windows update site and make sure you have ALL the Internet security patches installed. Finally you should not have automatic receipts sent. Look under Outlook "Tools / Options / Receipts" and make sure it is set to never send a read receipt. Also under Outlook "Tools / Options / Send" make sure you have "send messages immediately" unchecked. Now Outlook will not send whatever is in the outbox until you manually tell it to do so. Now you can check to see what is the "send items" box, and maybe how it got there in the first place.

: shop near here is in dire need to have his equipment re-checked and
: recalibrated.

It is rather obvious that it is not a "calibrated" reference. It is not the equipment that is the problem, it is the tech that will use equipment that is not in calibration - rather trivial for a signal generator.

: As far as once you have a calibrated radio - that is set to a known
: reference, the rest can be tuned by ear in a far more efficient
: fashion.

I agree that they can be roughly tuned. But, and maybe it is the engineer in me, I want to provide the best alignment possible. That cannot be done by ear, and can actually be quite far off for many circuits.

: The whole point of my posts in this thread is to address that
: experience in repair of radios does not always rely on high-caliber
: equipment. If you want to use a scope to find a burnt resistor - go
: ahead. The rest of us will use what facilities we have, like our eyes
: and ears and a trusty DVM, to locate the problems.

Yes, a DVM will probably find that resistor for you. In this case, a higher precision instrument is probably unnecessary.

Here is a link to a really good trojan horse removal program. It scans your computer and alerts you of any, and then gives you the option to remove them, if a known removal method is known... Also repairs system files if they are corrupted by it.

http://www.simplysup.com/tremover/

You can download a fully functional trial version, good for 30-days, after which the cost is $24.95 to register it.

sounds like you need to have your machine cleaned, sounds like a sub7
trojan virii or other somesuch similar creature,one you have it cleaned,
then you can go looking for better firewalls, sorry I can't help much
there, I run linux/unix systems at home, and at work we have *nix
firewall even though we do run microcrap on the workstations. personally
if you ARE going to run microsoft for an OS, you can do alot better than
outlook for mail and usenet. for usenet I hignly recomend forte` free
agent, and for mail I recomend eudora, neither of these programs are as
buggy as outlook and neither of these are as vulnerable to the various
email trojans that outlook is, hope this helps

Source record: 80248

Greetings!

And that is the unfortunate part, not a lot of radios need the hassle
of having to use the $$$ equipment being mentioned in this thread for
simple repairs or alignments.

Each one of the pieces of equipment being mentioned, are
inter-related. A scope is not accurate enough to truly determine
frequency of oscillation, the frequency counter and Signal Generator
back up the reference, but they cannot detect purity - the scope helps
with that.

It's all interrelated, but have different functions - bifurcation.

To me, it is more important that the user hear the audio, a SG, FC, or
scope - is the least important. If the person understands the audio on
a SSB QSO with little effort, the task is accomplished. A little off
is not a big deal, I know of radios that drift a considerable distance
of frequency as they warm up and stabilize. Considerably off, then the
problems occur as I mentioned earlier.

Let those who feel that this is not true, be damned.

This could get out of hand - really quick.

I guess I'll go EOT on this.

On Sun, 29 Apr 2001 19:05:02 GMT, while the modem was busy tying up
IRQ's with the Mouse, "Train" <cbmods@optonline.net> dissertated the
following:

:+> Andy,
:+> My point is that using a known source as a base is fine. This was not to get
:+> into the finer points of SG's or scopes and IS to say that the known source
:+> in this case would be and of the radios in use in the local area. I have set
:+> many a radio to my own Galaxy Saturn II or Drake R-7 or 757GX.

Greetings!

On 30 Apr 2001 07:50:55 GMT, while the modem was busy tying up IRQ's
with the Mouse, Bill Nelson <billn@spock.peak.org> dissertated the
following:

:+> Handy Andy <CodysPC@iserve.net> wrote:
:+>
:+> : Bill,
:+>
:+> : Although I would love to agree with the "calibrated" reference that a
:+> : signal generator could provide, I've found that a local tech at a CB
:+> : shop near here is in dire need to have his equipment re-checked and
:+> : recalibrated.
:+>
:+> It is rather obvious that it is not a "calibrated" reference. It is
:+> not the equipment that is the problem, it is the tech that will use
:+> equipment that is not in calibration - rather trivial for a signal
:+> generator.

Thank you for emphasizing the point that techs need to pay attention
to. When it comes to reputation, the above statement separates the bad
from the good.

:+> I agree that they can be roughly tuned. But, and maybe it is the
:+> engineer in me, I want to provide the best alignment possible. That
:+> cannot be done by ear, and can actually be quite far off for many
:+> circuits.

And I also agree, the unfortunate part is that many simple tools can
be used, but are ignored for the "big guns". It's almost like
overkill, or passing judgement. Fine to a point, but when it comes to
splitting hairs, the ear of the user is the one that will have to "put
up with what the radio will put out" in both RF and audio.

That is the importance of needing the ear - I have a few radios on my
bench that makes you wonder if the engineer of the original design was
tone deaf. It could explain a lot. ;-)

It genuinely sounds like you have a virus or a trojan. Inoculateit is free from the web and does a good job. It might be time to wipe the hard drive, fdisk it, and start over. If you have dsl or cable modem, you might consider buying a router and placing yourself on a LAN where virtually nobody can hack into. That, with a good software firewall pretty well prevents these things from happening.

It genuinely sounds like max is "antiANTIKEYCLOWNfaction", and after
he realized that the NNTP posting host line is identical he is now
looking for a way to avoid the consequences. Too bad his writing style
is identical as well (double-spaced between sentences, exactly three
periods after a word, paragraph spacing, etc.). Plus, his 'trojan
horse' seems to have the ability to read his email. By golly, if he
hadn't said anything at all he might have had some people fooled.

I also contacted Radio Industry Canada too. I suspected that digital operations were not permitted, but I checked anyway. The answer I got was very much different from the one you got. If I were you I would check again. Note that "GRS" is the official name for CB Radio in Canada. See the text below.

Dear Mr. Leland Scott:

Thank you for your enquiry regarding the permissibility of digital mode communications in the Canadian General Radio Service (GRS) band.

The answer to your question is not found directly in legislation but rather through the Radio Standards Specifications (RSS) for GRS. In general, RSS documents set out the technical standards that must be met by radio apparatus.

Section 15 of the Radiocommunication Regulations (RR) exempts radio apparatus from the requirement under section 4 of the Radiocommunication Act (RA) to hold a radio licence where that radio apparatus meets standards that are set out in the "Licence Exempt Radio Apparatus Standards List". The GRS RSS, namely RSS-136, entitled: "Land and Mobile Station Radiotelephone Transmitters and Receivers Operating in the 26.960 - 27.410 MHz General Radio Service Band" is included on this list. Thus by this inclusion, GRS equipment that meets RSS-136 is permitted to operate licence exempt. Conversely, if they do not meet the RSS's requirements they are not exempted and so would require a licence. Operation without the benefit of a licence carries certain penalties under section 10 of the RA. This said, Industry Canada does not intend on licensing equipment that does not meet the standards.

So, in order to determine if digital mode communications are permissible one must turn to RSS-136 as it is, in effect, the legislation. Sect 4.6 of RSS-136 specifies the permissible emissions, using the international emission designators: A3, A3A and A3J. These emissions are analogue audio, double or single sideband (TRC-43 relates). As such, digital communications

including packet, SSTV, etc. are not permissible. Regretfully, RSS-136 is not available on our internet site however it may be included in the future.

I hope this provides some clarification.

Regards, Rob

Subject: Re: Radiocommunication Regulations

Thanks for the reference. I did not however find the information I was seeking. The Radiocommunication Regulation document does not specifically mention your GRS (CB Radio), and RIC-18 does not mention digital communications. What I am trying to find out is if digital communications (such as "packet" and "SSTV" Slow Scan TV) are permitted on the CB Radio (11m band - 40 channels) in Canada. I saw a mention on an Internet news group that it was. Can you please provide a definitive answer?

Regards,

Leland C. Scott

That's good, let him do a little flooding, let him post a couple of obscenities,
and he can be gotten rid of via his extremely traceable ISP. (Unless he supports
illegal CB. Then we have to help him stay in business and online. On second
thought, forget everything I just said)

You have some excellent responses in the thread. Bear in mind, the first time you fire up ZoneAlarm, you have to give permission for each and every program to use the internet. Once you tell it Outlook Express can use the internet (and told ZoneAlarm to remember that answer), it can, without further permission, use the internet. If you didn't tell ZoneAlarm to remember your answer, it will again ask permission - regardless, once Outlook Express has access, it will send out whatever it has in its' outbox. Likely, you've got a problem (as mentioned in other posts in the thread). I had installed a couple of freeware programs and every time I turned the computer on, it would start dialing the internet. I shut off all internet access through Zone Alarm and started uninstalling every freeware program I had. No soap. I ended up exporting my addresses and favorites to the D drive and you can guess the rest. Format C:\ U. Reinstall Winblows. Beg for URLs. Finally, I am back up and running. You do have a virus checker running at all times, right?

73 and lots of luck
Jim

Used up almost 5 hours worth of tape over the weekend hoping to hear myself bootegged, (as in forged on the air) as was suggested by one of the short bus riders, but all I heard were the usuals.. Last weekend was an absolute slugfest, with some now well-known bootlegged calling going on..in addition to the usual N8 and KC calls being used for bootlegging on amateur freqs, a newcomer offered up his call for all....this is a grandaddy here folks, first licensed in 1973, the man wants all bootleggers to have his call, says it's just too much for him anymore and says he is dismayed at the lack of intellect displayed by a very small clique of certain licensed amateurs. Says he wants no money, just infamy. Wants to be more infamous than B-O-B, our favorite radio pirate on triple 5 USB. Who better for him to contact than our very own freeband Ezine recipients? Since I was judged, sentenced and appointed by the keyclown faction to be freebandings sole represenative for the entire world without ever being consulted, I would be amiss without giving a huge thank you to the new sponsor, that 'ol Kilo India fiver, and rest assured friend, that call is in great hands when you send it for listing in the webzine. .....The place to make ya' famous..click, click, click!

"What do you want? ISP? It's earthlink. His addy? Call? Phone number? Directions? Map to his front door where he works on illegal radios? Warn his neighbors? What? Tell me, man!"

We need another BELLY LAUGH!

"Oh, would the "we" refer to your old crew you ran around with? Are you now speaking for them as a whole? Or are you just looking to give some more great lip...service? Or does the "we" just refer to you, Leland,Dogie, and the pac bell pansie? Come on, come on........"

i asked tollfree about this and this is what he said:

It all depends on what is actually happening.

I can send email as ANYONE if I want to, just by using alternate source SMTP servers... Someone could be doing that to him. If its the case, it won't show up from his IP.

They could be sending him trojan emails, that cause his mail client to send out rogue emails, but thats pretty hard to do.

They could have sent him a virus, similiar to the Melissa, but then a simple scan from a virus scanner would fix that problem.

Bottom line, sounds like jibberish to me. If he REALLY wants to fix it, disconnect the phone line, open up outlook and see whats in the sent items folder. Probably nothing.

Tollfree

Wow! Dogie was right about something else, there is ANOTHER one, and guess what? It's a hammie, surprise, surprise! Here, we have AB2HR being a sacrificial lamb, happily professing his ignorance below for the masses, and for the porn posting posse crew of sparks and his pink ladies. Why is it, that so far only licensed amateurs, such as Leland C Scott, KC8LDO, and now AB2HR, are illiterate when it comes to knowing when a post is authentic or not? Maybe this webtv redneck, swamp dwelling idiot can teach y'all hammies that are pc challenged a thing or two, then again, probably not. One thing is absolutely certain, the disgusting, lying, little core of hammies that vocalize in here are absolute cretins. Worse than any cber I have seen in this ng in two years. Y'all are the poorest examples of ham radio I have had the displeasure to come across and y'all stab each other in the back. But where art thou? Why, on a cb ng, of course, getting your noses rubbed in your pink, stained panties by a lowly cber.

On 30 Apr 2001 03:44:06 GMT, "Twistedhed" <twistedhed@webtv.net> wrote:
I am posting here because of some of the nasty things I have read in this group and in QRZ discussions regarding freebanders. We who use the frequencies from 27.405 to 28.000 have more in common with hams than you might think. We are good operators and have knowledge of propagation and skip conditions. We use Yasus, Kenwoods and Icomm radios just like you do, so we know technical issues as well or better. However, the attitude of some hams toward us is rude and condescending. We are treated like 2nd class citizens. This should not be. We have the same rights under the constitution as legal hams do. For those that do not wish to be under Uncle Sam's thumb, freebanding is a viable alternative to getting a ham radio license. What I am saying is that maybe the next time you meet a freebander it might be wise to talk with him before you condemn him.
I am QRT and standing by. (No flames answered. Please reply via email)
Unit 2711, Florida

(sigh) The sacrificial lamb replied:

What you do NOT have in common with Hams is:
1. The legal right to use the frequencies you are utilizing

2. A common high regard for proper operating practices and properly
maintained and adjusted equipment.
Those are just for starters...

because hams frequent here also. i am a ham, but i still enjoy an occasial
rag chew on 11 meters.
did you know that the national forest service uses Ranger 2950 in thier
company trucks it is a standard The government put them in all the trucks
out west.
there is nothing illegal about this radio unless the owner mods it outs and
then transmits out of the ham bands.

WELCOME TO YET ANOTHER EPISODE of *Typical Twistedhed Insanity* as our boy reaches A NEW HIGH in accusing innocent parties!!!!

Apparently from what we can tell, Twistedhed cruised through QRZ, found a ham with the last name of "Sparks"...and decided (unilaterally and without ANY further proof) that this man and "Sparkey" are one in the same!

Now that he's latched onto this poor guy, nothing can convince him he's wrong. Oh, yeah, well, maybe notifying the guy that this Florida Retard is making threats about him on UseNet may put a sudden crimp in Twisty's style!

But there's a whole NEW chapter of "Twisty Twistin' In The Wind" ahead!

HAHAHAHAH!!!!

5876. TWISTEDHED A LOOSE CANNON!

Twistedhed has been rolling around on deck like a loose cannon, blasting innocent bystanders.

BLAM! He decided Leland was Doug!

BLAM! He decided Sparky was Leland!

BLAM! He decided Sparky is a ham from Texas!

The man needs to be yanked of the web before he does real damage.
